France hires consultants to report on Renault

By Jean-Jacques Renaux
SPECIAL CORRESPONDENT

PARIS — Booz, Allen & Hamilton Inc., a U.S.-based consultant group, has been called in by the French government to conduct a detailed study of Renault, the troubled state-owned automaker.

Last week, the French administration and Booz, Allen's Paris office would not confirm or deny the development, which was leaked to a French economics journal.

Renault would not confirm the report either, but a source at the company's headquarters implicitly admitted it by saying, "We don't even know whether the decision came from the minister of industry, Alain Madelin, or the minister of economy and finance, Edouard Balladur."

The news was reported last week by La Lettre de l'Expansion, a weekly newsletter published by l'Expansion.

According to the journal, the government called in the consultants to provide independent advice on how to deal with the money-losing car group. Booz, Allen conducted a similar study of Chrysler in 1980.

Renault lost the equivalent of about $1.6 billion last year and is expected to report a loss of about $750 million this year. Its debts are estimated at $9 billion.

Madelin, a minister in the recently elected conservative government, has been reluctant to help Renault financially.

After Georges Besse, Renault's president, talked to the press during the recent Paris auto show, Madelin reportedly was not convinced by Besse's optimism about Renault's improvement.

Besse was reluctant to speak about any financial help from the company's shareholder during his meetings with the press. He said, however, that Renault has been undercapitalized for many years.

Besse also said that Renault should become profitable toward the end of next year and thus show a full-year profit in 1988.

"Three years is a short period of time to turn around a group like Renault," said Besse, who has been Renault's chief for 21 months.

"It took more than that at Chrysler and Fiat," he added.

In a separate move, Renault will sell its headquarters on the outskirts of Paris and lease it back.

The company expects to raise $275 million by selling the office complex in Boulogne Billancourt on the southwest edge of Paris and other nearby properties.

Money raised from the sale also could help fund construction of a proposed $135 million headquarters and tech center in the same area.

Chevrolet celebrates 75th birthday
Seventy-five years ago, famed race car driver Louis Chevrolet, above, developed his experimental car, and Chevrolet was formed on Nov. 3, 1911. The car went into production the following year. Three-quarters of a century and 110 million sales later, General Manger Robert Burger shows off a 1987 Camaro ragtop.

U.S. dealership count dips by 270 during model year

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

Losses by General Motors, Ford Motor Co. and American Motors-Renault trimmed 270 locations from the domestic dealership total during the 1986 model year, the Automotive News census discloses.

There were 20,444 dealerships handling domestic makes of passenger cars on Oct. 1, compared with 20,714 when the 1986 model year began 12 months earlier. The dip amounted to 1.30 percent.

Chrysler Motors Corp. was immune from the downturn, just as it was in the 1983-85 seasons. Chrysler's dealer total rose by seven during the 1986 campaign. Volkswagen was stable, showing a decline of two outlets.

GM took the biggest fall, down 155 establishments. Ford lost 60 and AMC had a drop of 59. A change of one outlet in the number

GM slices back Saturn schedule

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Saturn Corp. executives finally broke their code of silence and revealed that Saturn will stretch out its $3.5 billion capital spending plan over a longer — and yet unspecified — period of time.

They also said the first phase of the plant will produce only 200,000 cars a year, instead of the originally planned 500,000, and will employ 3,000 people rather than 6,000.

In recent weeks, rumors surfaced that Saturn was scaling back its plans and facing major reductions in its original allocation. The rumors intensified in light of General Motors' $339 million operating loss in the third quarter, its announcement that it would close plants and its apparent acceleration of plans to cut its salaried work force.

At a press briefing last week to set the record straight, Saturn President Richard LeFauve said the original $3.5 billion allocated to Saturn remains intact, but the investment will be spread out over a longer period.

He said Saturn's goal is not to spend every cent of the $3.5 billion by the first day of production. A stretched-out spending plan gives Saturn a chance to produce cars and bring in revenue before spending the rest, he said.

"Our responsibility is to earn on our investment," LeFauve said. "Saturn is trying to minimize the investment and the number of people to accomplish the task.

"The way we're going to be successful is to do more with less," LeFauve added. "We may be criticized because our plant isn't going to be as big as we said it's going to be, but that's success for us."

One way in which the capital spending plan has been stretched

Toronado, Riviera get incentives

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' "Big One" — the 2.9 percent finance-rate program — wasn't big enough to clean out all of its 1986 inventory.

Buick Motor Division told dealers on Oct. 24 that they will receive a cash incentive of $300 on the first 1986 Riviera they sell and $500 on each one after that — through the end of the year. Oldsmobile Division is offering an identical program on its 1986 Toronado models.

The dealers will receive the rebate in addition to the normal carryover allowance paid on old models after the new model year begins. It amounts to about 5 percent of the car's sticker price minus some factory charges.

Buick estimates its dealers have 4,000 unsold 1986 Rivieras. That represents about 18 percent of the Rivieras produced in the 1986 model year. Oldsmobile estimates its dealers have 1,200 unsold 1986 Toronados; 28,418 Toronados were produced during the year.

Sales of both fell sharply in the 1986 model year: Riviera 53 percent and Toronado 52 percent.

The new Detroit-Hamtramck plant, which produces Riviera, Toronado and Cadillac Seville and Eldorado, was plagued by production problems and has yet to reach full speed of 60 cars per hour.

GM blamed the production problems on a combination of a new facility, new product, new work force and advanced technology. The plant was shut down for an extended model changeover period.

Riviera and Toronado were converted to front-wheel drive in 1986 and traditional buyers were reluctant to purchase the downsized cars with higher sticker prices than the previous year's models.

Cadillac Motor Car Division said it has no incentive program on leftover 1986 Eldorado and Seville models because the 2.9 percent financing cleared out most of them. It said that as of Oct. 20, stocks of 1986 models included 1,908 Eldorados and 2,458 Sevilles.

Nissan: A long way from its roots

Second of two excerpts from "The Reckoning," copyright 1986 by David Halberstam.

By David Halberstam

It was 1978. Marvin Runyon had pretty much decided to take an early retirement from Ford. Aside from personal considerations — his wife was not happy in Detroit and he wanted to find a job in the South for her sake — he was frustrated by the difficulty of keeping up the plants and with the overall problem of trying to build a good car in America. He was also disturbed by the firing of Lee Iacocca and William Bourke, two of Ford's best product men. He found Philip Caldwell, Iacocca's successor, extremely hard to deal with. Caldwell, he thought, understood the rule book but not the true essence of Ford Motor Co.

Runyon was coming up on 55, which was a good demarcation point, for he could retire with considerable benefits. He began looking for work in the South and soon was considering offers from various supplier companies. As he neared his own appointed date for retirement, Nissan's officials, having decided to open a factory in America, were looking for an American to run it. They learned through headhunters that Runyon, then vice-president in charge of assembly plants, was thinking of leaving Ford and approached him. Runyon let them know he was interested, and newspapers soon reported that Nissan was talking to a high Ford executive. Runyon's superiors knew it was he, and they made their distaste for what he was doing — going over to the enemy at the height of the battle — quite apparent.

Runyon did decide to join Nissan, but he did not leave Ford after 38 years because he was offered a job by a Japanese competitor; he left because of accumulated frustrations and because he was angry over the firing of Iacocca and Bourke. He believed, furthermore, that he was taking a job in an *American* company, one that would provide Americans with jobs, even though its parent company happened to be in Japan.

Range Rover names first U.S. dealers

At the opening of Range Rover of North America's headquarters are, from left: Rep. Steny H. Hoyer, D.-Md.; Prince Georges County Executive Parris Glendening; Princess Alexandra; and Charles Hughes, president of the company

LANHAM, Md. — Range Rover of North America Inc. opened its new headquarters here last week and announced the appointment of its first 11 dealers in the United States.

Charles R. Hughes, president of the company, said the opening culminated two years of planning. He said the decision to locate in Lanham was made after studying several East Coast sites.

The 20,000-square-foot facility houses the company's business offices and its service training and technical support personnel. Nearby is an off-road demonstration course.

Attending the opening were Princess Alexandra (first cousin of Queen Elizabeth II), British Ambassador Sir Anthony Acland and Maryland Lt. Gov. J. Joseph Curran.

J. Anthony Gilroy, managing director of Land Rover Ltd., the parent company and manufacturer of Range Rover in the United Kingdom, said he expects the United States to become an important market for the company, but would not predict annual sales volume other than the 3,000 vehicles the company has projected for the first year of operation.

Gilroy announced the first dealers for Range Rover of North America. They are:

Alfred E. Robinson, San Jose British Motors, San Jose, Calif.; Alexander Keeler, Keeler Motor Car Co., Latham, N.Y.; Martin L. Swig, San Francisco Auto Center, San Francisco; Wesley B. Lasher, Wes Lasher Inc., Sacramento, Calif.; Bernard F. Driscoll, Gengras Motor Cars, Hartford, Conn.; and Frank A. Miller, Miller Automobile Corp., Darien, Conn.

Also: Gerald L. Thomas, Thomas Cadillac Inc., Los Angeles; Terry C. York, Terry York Motor Cars Ltd., Encino, Calif.; Joseph T. Dockery, Prestige Motors Inc., Paramus, N.J.; John R. Capps, Plaza Motor Co., St. Louis; and William Gaby, Charles H. Hornburg Jr. Imported Motor Sales, Los Angeles.

The company intends to have 35 dealers nationwide by March 1987 and 65 by 1988.

Secret tapes liven case against six from Ford

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Trial of a suit brought by fired Ford Motor Co. engineering vice president Thomas J. Feaheny enters its sixth week today (Nov. 3). Feaheny will undergo more cross-examination by Jerome J. Shapiro, attorney for the six current and former Ford officers Feaheny is suing for some $130 million.

The jury has withstood a numbing drumfire of dates, names, titles, tables of organization, hundreds of pages of documents and hours of videotaped or lawyer-read depositions and low-quality tape recordings made surreptitiously by Feaheny.

The most dramatic evidence heard has been the secret tapes. They were offered by Feaheny's attorney, but the jury heard Feaheny making what some Ford executives thought were extortion or blackmail threats. He said he might testify for the opposition in Ford product-liability cases.

On Nov. 11, 1982, Feaheny met for lunch at Julio's in the Hyatt Regency in Dearborn with Herbert L. Misch, now retired but then vice president of Ford's environmental and safety engineering staff. That was a day after Feaheny had laid down demands covering his pending separation from the company.

He had said in that day-earlier meeting in Ford headquarters, when a mutually satisfactory separation still appeared possible, that he wanted $5 million in cash and might become an expert witness for anyone willing to pay $250 an hour and do some writing and public speaking.

A tape recording showed that Misch had expressed his astonishment at the situation then. The next day at Julio's he said (also on tape), "I'm a little bit at loose ends on it but, I've got to tell you — and maybe it's because I've got a little bit of a pea-brain and don't look at things as expansively as other people. And maybe I look too much to, and prize too much, the professional integrity and reputation that one should continue to strive for.

"But I think you've got to come up with something that doesn't look like blackmail to the company, that's all there is to it. You can say what you damn please, but the bottom line would be blackmail," Misch said.

Feaheny was vice president for vehicle research when he left Ford. He is trying to show that the defendants conspired to interfere with his employment relationship with Ford and to shorten his career. He was fired in 1983 shortly after bringing suit.

Defendants are Philip Caldwell, retired Ford chairman; Ford President Harold A. Poling; Louis R. Ross, executive vice president for Ford North American Automotive Operations; John McDougall, retired executive vice president for International Automotive Operations; Harold C. MacDonald, retired vice president for engineering and research; and Peter J. Sherry, retired vice president for personnel and organization.

In the tapes, Feaheny acknowledged that a $5 million lump sum paid to him might attract the attention of the Securities and Exchange Commission or stockholders.

He said the matter could be handled with personal checks from "certain executives, or, as far as I'm concerned, it's an out-of-court settlement on a personal injury suit not filed."

"For that matter, my mother and dad are deceased. The Ford family can adopt me and give me some Class B shares. I don't care," he said.

see FEAHENY, page 45

Rolls seeks a 'double' model year

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Rolls-Royce Motors Ltd. has asked NHTSA to change its definition of model years used during the phase-in period of the passive-restraint standard. The company wants more leadtime to install a driver's side air bag in its cars.

Rolls-Royce said it prefers air bags to passive belts but, because of the supplier situation, it needs more development time than its larger-volume competitors.

As a result, Rolls-Royce has asked NHTSA to combine the 1987 and 1988 model years and allow the company to install fewer passive restraints than mandated during the beginning of the period in return for exceeding the requirements by the end of the period.

The passive-restraint standard requires automakers to phase in passive systems — 10 percent for 1987 models, 25 percent for 1988 models, 40 percent for 1989 models and 100 percent for 1990 models, with model year designations beginning Sept. 1 and ending the following Aug. 31. The standard applies to both front-seat positions.

Compliance percentages are tallied at the end of the model year, so many makers have delayed the introduction of passive restraints. That also gives manufacturers like Rolls time to petition for changes to enable it to go to bags or comply within the current mandated time-frame using passive belts.

Rolls said that if NHTSA will change the model-year definition to run from Sept. 1, 1986, to Aug. 31, 1988 — in effect, combining the 1987 and 1988 model years — Rolls should be able to have the driver air bag fitted to "around 70 percent of the cars we market in America, well in excess of the 25 percent and 40 percent fitment requirements for the 1988 and 1989 production period specified" in the passive-restraint standard.

The company intends to use air bags on four-door sedans, but if not allowed flexibility on model years, it will use passive belts on only the minimum percentage required.

Rolls-Royce said the petition to combine model years was prompted by other changes NHTSA has made in the standard.

Among them was the granting of Ford's request in August 1985 to allow its Tempo-Topaz system, which is driver-side passive with an air bag and passenger-side active with a belt (essentially half passive and half active), to count toward the standard.

Suzuki charts sales boom, maybe U.S. plant

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

Suzuki of America President Toshiyuki Arai dreams of building cars in the United States — and his vision may be focusing on one of several plants that General Motors plans to close.

Arai said plans that would turn his dream into reality have not yet been approved by parent Suzuki Motors Ltd., of Japan.

His ambitious five-year plan to top 300,000 sales annually by 1991 hasn't been cleared in Japan, either. But it appears to call for a U.S. assembly plant to supplement supply from a GM-Suzuki facility being built in Ingersoll, Ontario. GM owns 5.3 percent of Japan's Suzuki Motors.

"My dream is to build cars in the United States," Arai said last week in Detroit. Annual volume of 120,000 units must be assured before a U.S. facility would be practical, he said.

Arai would prefer an existing plant if the price is low, but he is prepared to go with a "clean-sheet plan" if necessary. He would consider one of up to six GM plants slated to be phased out — if the price is low enough.

That is partly because of GM's share in Suzuki and the Japanese small-car specialist's role as a supplier of the Chevrolet Sprint.

A GM spokesman said GM's long-standing policy is that manufacturers should build in the country they market in. "This is a positive position on Suzuki's part," the spokesman said.

U.S. production may appear premature for the Brea, Calif., company that entered the market 12 months ago with the $6,895 Samurai four-wheel-drive sport-utility vehicle.

But with a dealer network mostly in Western states, Suzuki of America sold 37,000 vehicles in the year ended Oct. 31, more than the more-publicized Yugo.

"We're right on track on developing our dealer network and well ahead of projections on sales," said Doug Mazza, vice president for sales and marketing.

Suzuki of America's five-year plan sets ambitious sales goals, fueled by new models.

Samurai sales are running at an annual rate of 50,000 and Suzuki expects to sell its supply of 76,000 for the 1988 model year, Mazza said.

The Ingersoll plant is due to open in July 1988, with expected first-year production of 200,000 1989 units — about 120,000 Sprint-sized cars and 80,000 small sport-utility units. The latter will have a wider track and longer wheelbase than the Samurai.

GM in Canada and the United States and Suzuki's Canadian and U.S. operations will split production, with Suzuki of America getting 17.5 percent of output, or 35,000 units. GM will get most of the cars, which will be 1989 replacements for the Chevy Sprint, but Suzuki of America will have a slightly different version to sell as its first car.

At the same time, Chevrolet will have its own version of the sport-utility vehicle, identical except for equipment. Suzuki is aiming at a price of just under $10,000 for its model.

The new models and continued imports of Samurai at the same level are projected to push 1989-model-year sales to 110,000, Mazza said.

For the 1990 model year, Suzuki expects to introduce its first exclusive model, a small car in two-door and four-door versions.

That will be followed in 1991 with a Suzuki-exclusive small sports car. It will be aimed at the segment "vacated by the upscaling of the Mazda RX-7," Mazza said.

Suzuki of America expects the two exclusives to push its sales to 250,000 for the 1990 model year and 305,000 for the 1991 model year.

Where the last two models will come from is uncertain, Mazza said. But between them, Suzuki is counting on a volume surge of almost 200,000 units.

Options include a U.S. plant, an increase in imports from Japan, expanded production or a bigger share of output in Canada or both and sourcing from Suzuki plants outside Japan.

Arai and Mazza said they hoped for relief from Japan's voluntary export quotas, but they said they share the opinion of industry analysts that such restrictions will not end or ease much in the near future.

Suzuki has small-volume, joint-venture assembly operations in several countries. All essentially assemble complete-knockdown kits, and the ability to export to the United States from those countries less expensively than from Japan is problematical.

The five-year plan has two constants.

"We will always stick to small, high-performance unique vehicles that fill niches where nobody else is," Arai said. That draws on the small-engine technology which Suzuki developed as a motorcycle manufacturer.

Second, Suzuki's plan depends on developing a dealer network that is closely regulated and profitable, Mazza said.

Suzuki dealers — in Georgia, Florida and nine Western states — are averaging 57 units a month, ahead of Suzuki's projected rate of 37 a month, Mazza said.

Thirty new dealerships opened in October in nine Eastern states. Chicago and nearby Midwest markets will have dealers by year's end, Mazza said. The five-year plan calls for 250 dealers by 1991 and 49-state representation by the end of 1987, Mazza said.

Ford dealers at other sites bid on cars in TV auction

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. recently tested a closed-circuit television system to auction used vehicles.

Ford broadcast a live auction held at Aptco Auto Auction, Taylor, Mich., to dealers in Milwaukee and Louisville.

Twenty-four dealers participated in the video auction which was held in conference rooms at Ford's Kentucky Truck Plant and at the district sales office in Milwaukee. About 85 dealers attended the live auction.

General Motors also has conducted experiments using electronic media to auction vehicles. In the GM experiments, dealers were provided with pictures of autos and made their bids through a computer network.

Claude Scoggins, Ford fleet sales disposal manager, said, "We were trying to see if we could conduct a live auction and have outlying dealers participate simultaneously."

He said the dealers in Milwaukee and Louisville received the audio and video broadcast of the live auction via satellite and relayed their bids to the auction by telephone.

Scoggins said, "There is a delay in the transmission of audio, so we tried to overcome that with telephone bids. We had a 'ring man' at the remote site transmit the bids by phone."

He said the auction was a success and dealers in the remote areas bought about 40 of the 200 cars auctioned in Taylor.

Television auctions could expand the services of the auction industry, Scoggins said. He said technology that would allow auction companies to broadcast to individual dealers is available. Dealers, he said, would not have to travel to buy top-quality cars.

He said, "We're testing this technology for Ford and Lincoln-Mercury dealers to see if it is possible. It is up to the auction companies to take it and run with it."

Dealers watched the auction on four monitors in each location. Vehicle condition was displayed on the monitors. Also, there was a cameraman on each side of the cars auctioned. In addition, the participants had data sheets explaining the condition of the cars.

Dealers must be convinced that cars in a television auction are in top condition, a Ford official said.

Scoggins said that all vehicles Ford auctions are reconditioned. The vehicles in the television auction were no older than two years.

Scoggins said the dealers participating in the television auction appeared enthusiastic, but that is something Ford must evaluate.

He said, "Do you get more enthusiastic watching the World Series on television or in person? This is something we have to look at."

Ford is planning another television auction. The next test will involve four to six locations with 25 to 50 dealers at each location, Scoggins said.

AUCTION DATES

American Motors

Nov. 4 — Aptco Auto Auction, Taylor, Mich., and D-A Auto Auction, New Stanton, Pa.

Nov. 5 — Minneapolis Auto Auction, Plymouth, Minn., and Metro Milwaukee Auto Auction, Caledonia, Wis.

Nov. 6 — Todd Auto Auction, Telford, Pa.; Evansville Auto Auction, Evansville, Ind.; and Northway Exchange Auto Auction, Clifton Park, N.Y.

Nov. 11 — High Point Auto Auction, High Point, N.C.

Ford Motor Co.

Nov. 5 — Concord Auto Auction, Acton, Mass., and Golden Gate Auto Auction, Fremont, Calif.

Nov. 6 — Atlanta Auto Auction, Red Oak, Ga.; Arena Auto Auction, Chicago; Dallas Auto Auction, Dallas; and Southwest Auto Auction, Phoenix, Ariz.

Nissan eyes sales peak of 880,000

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

SAN DIEGO — Nissan Motor Corp. in U.S.A. is counting on new, restyled and redesigned products to boost 1987 sales despite a strong yen and a cooling U.S. market.

Nissan will post its best year ever in the 1987 model year with 880,000 sales — 610,000 cars and 270,000 light trucks, Senior Vice President C.P. King predicted.

In the 1986 model year, Nissan sold a record 561,000 cars and 220,000 trucks.

King forecast industry sales of 10.7 million cars and 4.3 million trucks for the 1987 model year. That total of 15 million would be down from 1986's 15.8 million.

Three models to be introduced late this year will expand Nissan's market representation into segments covering 66 percent of all car sales and half of light truck sales, King said.

They are a facelifted 300-ZX, an all-new Pulsar NX and Nissan's first van in December.

Pulsar: minus T-roof and removable hatch, it's almost a convertible

The new Pulsar NX will be an image leader. Like the new Hardbody truck, the Pathfinder van and the updated 300-ZX, the work originated in the Nissan Design Center in San Diego.

The new Pulsar is longer, wider and lower, but the biggest changes are in the back half of the car.

A 2+2 design intended to be used as a two-seater, the Pulsar has as standard equipment a steel T-roof and a contrasting-color rear hatch that is removable.

With the hatch off and roof panels out, the car functions like a convertible while retaining a steel roll cage.

Nissan will test-market a squared-off replacement hatch called the Sportbak next spring. Interchangeable with the standard Pulsar hatch, it looks and functions like a station wagon.

Tentative prices are $10,500 for the Pulsar XE and $11,500 for the SE package. Volume is projected at 60,000 a year, up from 48,000 for the old Pulsar.

The new van, based on the Japanese home-market Largo, is a virtual clone of the Toyota van. King projects 24,000 to 36,000 first-year sales.

Feds strengthen case in long DeLorean trial

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The government's case against former automaker John Z. DeLorean slowly but surely picked up steam last week.

After a shaky start the previous week, prosecution witnesses testified to point after point that seemed to support the government's case against DeLorean.

DeLorean, 61, is charged with 15 counts of fraud and racketeering relating to the disappearance of $17.65 million from his defunct sports-car project. He pleaded innocent to all charges.

The testimony was slow, often technical and sometimes tedious.

The week began with testimony from two FBI agents concerning the verification of DeLorean's handwriting on several key documents entered into evidence.

They were followed on the witness stand by Robert M. Dewey, former DMC chief financial officer. Dewey testified about the early fund-raising days of the DeLorean sport-car venture and particularly events surrounding the DeLorean Research Limited Partnership, which raised $12.5 million of the missing money.

After Dewey testified, the government played videotaped depositions of European witnesses. Three people — C. Shaun Harte, a former goverment official who later worked for the DeLorean Belfast company; Ronald Henderson, a former British government official; and Robin J. Bailie, a Belfast lawyer who represented the Belfast company and the government — testified that they knew nothing of the secret dealings of GPD Services Inc., the Swiss-based Panamanian company to which the missing money was paid.

Also testifying were three officials from Lotus. Chief Engineer Colin Spooner testified that much of the DMC development work performed by Lotus was not completed until 1980.

Company secretary Thomas Monk testified that he was directed to take a sealed envelope to DeLorean in New York and then carry a $4 million check to GPD in Geneva. Financial officer Warren King testified that of the $22 million Lotus was paid for the DeLorean work, only $137,000 came from GPD.

The only consistent point the defense managed to make on cross-examination was that the witnesses all believed the late Colin Chapman, Lotus and GPD were "one and the same."

However, Walter F. Strycker, former chief financial officer of DMC, testified on Friday that his only source of information about the Chapman-Lotus-GPD connection was "John DeLorean" and DMC general counsel Thomas Wando Kimmerly.

By week's end, the demeanor of defendant DeLorean and his attorneys changed. Midway through Thursday's session, defense attorney Juanita Brooks, unable to shake the tesimony of a government witness, began implying the government had acted improperly.

And during a Friday break, DeLorean loudly berated a reporter for his coverage of the trial. DeLorean told the reporter that the odds in Las Vegas are "five to one" that he'll be acquitted.

FEAHENY

FROM PAGE 3

Feaheny's lawyer, James F. Schouman, has said his client's remarks about wanting $5 million had been made in response to pressure.

Feaheny said, "It was not blackmail at all. There was no blackmail in it. It was compensation to me and my family for damages done to us."

Attorney Shapiro has attempted to show that what has been called Feaheny's abrasive quickness to criticize others, particularly his superiors, emerged as early as 1970 with a letter to then Ford President Lee A. Iacocca. Feaheny, however, has said his career began to unravel after defendant Ross arrived at NAAO in the fall of 1979.

One letter sought by the defendants during discovery was not in the 14 boxes of papers Feaheny said he took from his office at Ford when he was suspended after filing suit in mid-1983. He said he took those documents to his Bloomfield Hills, Mich., home in his wife's station wagon and soon had them stored in a Pontiac Township, Mich., locker owned by the Phoenix detective agency.

He called those papers "my personal documents in my view acquired as part of my work." Among them was a 76-page, 10-year product-cycle plan covering Ford North American Automotive Operations vehicles through the 1992 model year.

DEALERSHIPS

FROM PAGE 1

of intercorporate duals brought the industry's net falloff to 270.

It was the poorest showing since the 1982 model year when 1,267 dealerships faded away. That was the final year of the recession, and the situation was to improve considerably.

Only 80 domestic dealerships left the field in the 1983 model year, and the following season was indeed wondrous with a gain of 46. The 1985 model year resulted in a decline of 149 outlets; the latest dip of 270 was almost twice as severe.

All figures in this article and in the accompanying tables signify the net change in dealer totals, both for the individual corporations and car lines and for the domestic industry as a whole.

There was no overriding reason for the latest decline. Domestic sales held up pretty well. They topped eight million, although they were down about 4 percent from the 1985 model year. There was no monstrous rise in floorplan rates.

Import competition doubtless played a part, but that is mitigated somewhat by the fact that some 60 percent of domestic dealers also handle a foreign line.

Nevertheless, many dealers decided it was time to bail out.

Franchise totals rose for five of the 14 makes in the domestic census. Dodge, up 21, made the biggest advance, and there were lesser gains for Plymouth, Chrysler, Lincoln and Cadillac.

The two largest dealer organizations posted the largest losses. Chevrolet was down 90 for the 1986 model year, and Ford was off 67. Also reporting dips were AMC, Renault, Oldsmobile, Pontiac, Buick, Mercury and Volkswagen.

Chrysler Motors' gain of seven dealerships was its fourth consecutive model-year upswing. The company added 32 outlets in the 1985 model year, 164 in 1984 and 169 in 1983.

In addition to its 4,001 car dealerships, Chrysler Motors has three that handle only Dodge trucks. They are not included in the corporation's car dealership total or in the Dodge car franchise total.

Ford Motor's loss of 60 outlets compared with a dip of only three in the 1985 model year. Ford posted a gain of 80 in the 1984 season and showed no change in 1983.

Ford Motor has 112 dealerships that handle only Ford heavy-duty trucks. They are not included in the company's car dealer total of 5,471 or in the Ford Division car franchise total of 4,627.

GM's dip of 155 outlets was greater than its declines of 110 in the 1985 model year and 75 in 1984, but it was less than the drop of 170 in the 1983 campaign.

GM's car dealership total is 9,720. Adding in the GMC Truck outlets that do not handle any of the corporation's car lines, the count is 10,280.

The AMC-Renault dip of 59 outlets was about the same as the drop of 53 in the 1985 model year. About 90 percent of the 1,356 AMC-Renault outlets handle both lines. There are 719 AMC-Renault duals with Big Three makes.

VW's decline of two outlets was less than in recent model years. The drop was 19 in 1985, 14 in 1984 and 39 in 1983. VW has about 170 duals with AMC-Renault and Big Three makes.

In the third quarter of this year, the domestic dealer total showed a decline of 127 outlets. For the first nine months, the dip was 229.

OBITUARIES

S. Edmund Steeves

DETROIT — S. Edmund Steeves, 69, a former General Motors public relations executive, died Oct. 23 while visiting Lincoln, Neb. Mr. Steeves retired in 1976 as director of field operations for the GM public relations staff.

Robert Brenner

GAITHERSBURG, Md. — Robert Brenner, 64, an auto safety expert who helped establish and enforce federal safety standards for automobiles, died Oct. 24. Dr. Brenner was president of the Institute for Safety Analysis Inc., a research and consulting firm in Rockville, Md. From 1970 to 1973, he was the Department of Transportation's chief scientist. During the 1960s, he was acting director of the National Highway Safety Bureau, predecessor of NHTSA.

Fred J. Brenkman

MORTON, Ill. — Fred J. Brenkman, 59, president of Brenkman Oldsmobile-Cadillac Co., Pekin, Ill., and Brenkman Chrysler-Plymouth-Dodge, Morton, Ill., died Sept. 26.

George F. Parr Jr.

CORPUS CHRISTI, Texas — George F. Parr Jr., 65, founder of Parr Chrysler-Plymouth Inc. here, died Oct. 2.

James Stephen

DAYTONA BEACH, Fla. — James Stephen, 67, a retired Pontiac dealer, died Oct. 26. Mr. Stephen's dealerships were in Daytona Beach and Baltimore.

CORRECTIONS

A story in the Oct. 27 issue of Automotive News incorrectly said that Lloyd E. Reuss, General Motors executive vice president, told last summer's Automotive News World Congress that GM would close six assembly plants by 1990. In his speech, Reuss said GM would close three assembly plants by 1990.

Also in last week's issue, many of the optional gasoline engines for GM light trucks, included in the "U.S. 1987-model light-duty truck specs" table on Page E46 were listed as having carburetors.

For 1987, all GM light-truck engines in trucks up to 10,000 pounds GVW (all those listed) use electronic fuel injection. Also, listings for the Chevrolet/GMC R-10/1500 pickup truck and G-10/1500 van did not include the optional 5.7-liter (350-cid) V-8 gasoline engine.

In addition, the 4.8-liter (292-cid) engine listed as an option for the R-20/2500 pickup truck has been dropped.

In the Oct. 13 issue, imported-car sales figures for the 1986 model year under the Chrysler nameplates were incorrect.

The correct figures are: Dodge Conquest/Vista, 20,107; Plymouth Colt, 49,259; and Plymouth Conquest/Vista, 18,822.

The import total is 3,129,610 and the industry total is 11,188,428.

PRODUCTION

Car production continues to climb; week up 5.67%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled production of 175,483 cars last week, 5.67 percent more than the previous week's 166,069 and 1.53 percent more than the year-ago week's 172,835.

In each of the last two weeks, production has been the highest since the week ended June 28.

Last week's targeted production was shared as follows: General Motors, 53.73 percent; Ford Motor Co., 21.64 percent; Chrysler Motors, 15.33 percent; Honda of America Manufacturing Inc., 4.17 percent; New United Motor Manufacturing Inc., 2.34 percent; Nissan Motor Manufacturing Co., U.S.A., 1.65 percent; and Volkswagen of America, 1.14 percent.

American Motors' Kenosha, Wis., plant was idle last week for inventory adjustment. The plant is expected to resume output today (Nov. 3).

The number of indefinite layoffs at GM increased by 1,500 to 20,500. The layoffs affected several GM plants.

GM did not schedule overtime at any of its car plants last Saturday (Nov. 1).

Daily overtime is slated this week at all Ford plants except the Dearborn, Mich., and Lorain, Ohio, facilities.

Chrysler's Sterling Heights, Mich., plant was scheduled for overtime last Saturday. Daily overtime is slated this week at five Chrysler plants. They are: Belvidere, Ill.; Detroit (Jefferson Avenue); Newark, Del.; St. Louis (No. 2); and Sterling Heights, Mich.

Truck output jumps 10%

Domestic truck production totaled 69,952 units last week, 10 percent more than the previous week's 63,591 and slightly (0.5 percent) above the year-ago week's 69,602.

Ford Motor Co.'s Norfolk, Va., and Twin Cities, Minn., plants were to resume production today (Nov. 3). Both plants had been idle since Oct. 20 for model changeover.

General Motors slated Saturday (Nov. 1) overtime at its Flint, Mich. (No. 1), and Baltimore plants.

Saturday overtime was scheduled at Ford's Louisville, Ky., plant. That plant and Ford's Lorain, Ohio, and St. Louis plants are slated for daily overtime this week.

Chrysler Motors' Warren, Mich., plant was scheduled for overtime Saturday. Warren is also slated for daily overtime this week.

Canadian output up 1.8%

Last week's targeted Canadian auto production of 25,700 was 1.84 percent more than the previous week's 25,235 and 4.59 percent more than the year-ago week's 24,573.

So far this year, 875,831 cars have been assembled, 1.56 percent below the 889,694 completed last year at this point.

Truckmakers scheduled production of 10,634 units last week, 5.96 percent below the previous week's 11,308. Downtime at Ford's Ontario truck plant in Oakville reduced production each week; the plant is scheduled to resume work today (Nov. 3).

Last week's output was 40.31 percent below the year-ago week's 17,814.

Year-to-date, 675,578 trucks have been built, 3.27 percent below the 698,436 assembled last year at this time.

Parts talks with Japan resume; U.S. is hopeful

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — "Cautious optimism" is the phrase being used to describe the present state of U.S.-Japanese auto parts trade negotiations.

Concluding two days of meetings here with Japanese trade officials, Commerce Department spokesmen and U.S. industry officials used the same inscrutable language in characterizing the sessions.

The meetings, called MOSS (Market Oriented Sector Specific) talks, were instituted by the Reagan administration as a means of settling industry-by-industry trade disputes with the Japanese government.

The administration is seeking commitments from the Japanese to increase purchases of U.S. auto parts for use on vehicles both here and abroad. Since the Japanese ended most formal restrictions on auto parts imports in 1980, the negotiations have tended to focus on loosening the tight manufacturer-supplier relationships between Japanese automakers and parts makers.

Deviating from the official script, one negotiating team member said of the Japanese, "They didn't give a lot. They are tough negotiators."

The Washington session will be followed by a third series of meetings in Tokyo on Dec. 8. The negotiations, which may consist of as many as eight meetings, are expected to be completed by early September. The first meeting was held in Tokyo in August.

The Automotive Parts and Accessories Association said U.S. parts exports to Japan totaled $191 million in 1985, compared with Japanese shipments to the United States of $5.2 billion, including shipments to U.S. Foreign Trade Zones. That resulted in a U.S. trade deficit of $5 billion, APAA said.

Taurus, Sable in Ford recall

DEARBORN, Mich. — Ford Motor Co. is recalling 1,230 1987-model Ford Taurus and Mercury Sable models due to faulty steering and rear suspension components.

Ford said it is recalling 600 of those cars to inspect and replace, if necessary, a part of the intermediate steering shaft assembly that connects the steering column to the steering gear. The company suspects three Taurus-Sable units have a faulty steering column part that could cause separation of the steering shaft, resulting in loss of control without warning.

Ford also is recalling 630 Taurus and Sable models because of what it called a poorly made rear suspension part.

A company spokesman said 344 rear suspension components had been "inadequately strengthened" and could break under heavy force, causing a loss of control.

The two actions bring to seven the number of recalls on Taurus and Sable models.

GM will close 11 plants by '90, save $500 million

Cutbacks to cost 29,000 jobs

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

General Motors said last week that it will close six assembly plants and five metal fabricating plants during the next three years, eliminating about 29,000 jobs.

The 29,000 jobs represent 5.7 percent of GM's 512,000 U.S. hourly and salaried employees. GM said the 11 plant closings will cut its annual fixed costs by $500 million.

GM also confirmed it will lay off 1,300 hourly workers at its Buick City plant in Flint, Mich., because of slow Buick LeSabre sales. The plant will cut production from 75 units per hour on two shifts to 60 units per hour on two shifts beginning Nov. 24. The plant employs 6,100 hourly and salaried workers.

In making the announcement of plant closings, GM Chairman Roger B. Smith and President F. James McDonald called the closings "absolutely necessary." They said GM's plan has been to build new plants and modernize old ones with the idea that obsolete plants would be closed.

Smith and McDonald suggested that more plants could be closed in the future. They did not elaborate.

Some of the 29,000 people affected will be eligible for a job bank or extended benefits. Some will have transfer rights to other GM plants, but GM could not say how many.

The closings, which come during a time of decent car sales and a relatively good economic climate, could affect national negotiations with the UAW next summer, when job security is expected to top the union's list of concerns. Smith, however, said the closings would provide workers with better job security because the remaining jobs would be more secure.

UAW Vice President Donald F.

Analysts say GM must do more to end its troubles

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

For the past year, Wall Street and the automotive industry have waited for General Motors to detail its plan for bringing costs under control and getting competitive.

But industry watchers figure they will have to wait some more for a detailed, cohesive plan, even though GM has revealed some cost-cutting moves in bits and pieces during the past year.

The most dramatic piece so far came last week, when GM announced its biggest cost-cutting move to date — the closing of six assembly plants and five component plants within three years, eliminating 29,000 jobs.

News Analysis

GM also has said in the past year that it will cut its white-collar ranks 25 percent by 1989.

And the company has confirmed in recent weeks that its Saturn program will be phased in over a longer — as yet unspecified — time period. The initial investment will be half the $3.5 billion originally planned. Initial production will be 200,000 units annually, not 500,000. And initial employment will be 3,000, not 6,000.

In the past year, GM also dropped its GM80 project, the plastic-bodied replacement for the Chevrolet Camaro and Pontiac Firebird, and scaled back — or at least stretched out — GM10, its mid-size car program. Future car programs will merge platforms to reduce the number of models offered and to cut manufacturing costs.

GM spun off its heavy-truck operations into a joint venture with Volvo and combined its diesel engine operations with Deere & Co.

Overseas, GM sold off its South African subsidiary, restructured GM-Holden's in Australia and eliminated large-truck production in its Bedford Division in the United Kingdom.

GOP losses could affect trade, taxes

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Last week's congressional elections put Democrats in the legislative driver's seat for the next two years at least. Tax and trade issues figure prominently on their road map.

Gone will be the Republican Senate that helped President Reagan put a rein on gov[illegible]ment regulation of the auto industry. In power will be Democrats who are talking tough on trade and are determined to reduce the federal budget deficit, perhaps by raising taxes.

President Reagan's ability to fend off legislation unacceptable to the GOP is not to be underestimated, however. Armed with personal popularity and a veto pen, the Republican president remains a formidable opponent.

The Democrats will have a 55-45 majority in the Senate and a 79-seat margin in the House, giving them cont[illegible]l of all House and Senate committee chairmanships.

In Republican hands the last six years, the Senate committees have defeated numerous proposals from the Democratic House that were opposed by most of the auto industry, including various trade, safety, emission and tax proposals.

Outgoing Senate Majority Leader Robert Dole, R-Kan., said after the election that Republicans will work with the Democrats on trade legislation next year and that they might want to "revisit" the tax code. Dole will likely be replaced as majority leader by Sen. Robert Byrd, D-W.Va.

UAW President Owen Bieber hailed the Democratic victory in the Senate. "People know that Reagan's huge twin trade and budget deficits spell economic trouble ahead," he said.

". . . Democratic control of the U.S. Senate greatly improves the prospects for decisive policies to deal with the alarming trade deficit, which has destroyed so many good jobs and blighted so many American communities."

The National Automobile Dealers Association and the American International Automobile Dealers Association were not as well disposed toward the change of command in the Senate.

"The words of Sen. Robert Byrd on the occasion of his victory statement were enough to make every

Fiat to buy Alfa; Ford bid spurned

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Ford Motor Co. walked into another political buzzsaw when it tried unsuccessfully to gain control of Italian carmaker Alfa Romeo.

Italy's Fiat marshalled government support and mobilized Italian public opinion, and last week it won state-controlled Alfa with a competing bid that was backed by two independent consulting firms.

The resulting new company, which combines Alfa Romeo with Fiat's upscale Lancia unit, plans to become a major executive-class

The battle begins for untapped China

By Andrew Tank
STAFF CORRESPONDENT

BEIJING — China, the world's largest unexploited auto market, is emerging as a major battleground for multinational automakers. Surprisingly, Japanese firms have lost the early stages of the contest.

Round 1 was a decisive victory for the Europeans. West Germany's Volkswagen won the major contract for making sedans, while important deals for making commercial vehicles have been won by Italy's Iveco, Austria's Steyr, Britain's Aveling Barford and France's Peugeot and Renault.

West Germany's Daimler-Benz is assembling a few Mercedes luxury cars in China and is eagerly pursuing various truck-making possibilities.

Round 2 was won by the Americans after a tough fight. American Motors received high-level backing to assure the viability of its joint venture making Jeeps in China. General Motors scored an early success with its Detroit Diesel Allison subsidiary and hopes for another major deal by the end of this year.

Domestic car supply bloats after incentives

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Stocks of new domestic cars in October rose dramatically as the Big Three auto manufacturers dropped incentives in the early part of the month.

On Nov. 1, the days' supply was 60, up from 35 days on Oct. 1.

The ideal days' supply is generally considered to be 60 days.

As November opened, there were 1,412,637 new domestic cars in inventory at assembly plants and dealerships and in transit to dealerships. On Oct. 1, 1,291,280 were stockpiled.

Inventory at all domestic manufacturers except Honda climbed during October.

General Motors had a 68-day supply on Nov. 1, up from 36 days a month earlier; Ford stocks climbed to 56 days from 34; and Chrysler Motors stocks rose to 54 days from 35 days.

Volkswagen had an estimated 93-day supply on Nov. 1, up from 64 days. Nissan stock climbed to 46 days from 28 days. Honda stock remained at 11 days on Nov. 1, the same as one month earlier.

Companies shared the Nov. 1 inventory as follows: General Motors, 58.38 percent; Ford Motor Co., 22.83 percent; Chrysler Motors, 14.54 percent; American Motors, 1.36 percent; Volkswagen, 1.30 percent; Honda, 0.79 percent; and Nissan, 0.80 percent.

A month earlier, shares had been: GM, 57.28 percent; Ford, 23.19 percent; Chrysler, 15.31 percent; American Motors, 1.80 percent; Volkswagen, 1.22 percent; Honda, 0.76 percent; and Nissan, 0.44 percent.

Shares by market class on Nov. 1 were: Intermediate, 33.78 percent; compact, 22.16 percent; subcompact, 19.01 percent; standard; 13.41; and luxury, 11.64.

Shares on Oct. 1 were: Intermediate, 32.87 percent; compact, 21.65 percent; subcompact, 18.14 percent; standard, 15.27 percent; and luxury 12.07 percent.

Chrysler to buy part of AMC? Both deny it

Newspaper story hinted at linkup

Officials of Chrysler Corp., American Motors and Renault denied a report last week indicating that Chrysler was interested in buying a major portion of AMC.

The Detroit Free Press quoted unnamed officials close to Chrysler and AMC as saying Chrysler was "considering asking" its board of directors last week for approval to discuss a buy-out with executives at AMC.

The story said Chrysler was eyeing AMC's lucrative Jeep product line, as well as assembly plants in Toledo, Ohio, and Kenosha, Wis.

The Detroit News said Chrysler and AMC could announce a major linkup soon in which Renault would play a key role.

All three companies downplayed the reports.

"Ever since we announced the reorganization, we've been getting questions about acquisitions," said John Guiniven, a Chrysler spokesman. "We won't comment either pro or con on any speculation about acquisitions in order to not mislead the public."

Chrysler had a board meeting in New York last week and has another scheduled for Dec. 4, but Guiniven said he was not aware of any proposal concerning AMC on the agenda for either meeting.

In a statement, AMC said:

"American Motors has had no discussions with Chrysler regarding the sale of any company assets."

Financial analysts who attended a routine AMC briefing in New York last week said the automaker denied any of its holdings were up for sale.

French carmaker Renault, which owns a controlling 46 percent interest in AMC, also denied the report.

"We're not surprised by the story," a Renault spokesman said. "The Free Press has sold AMC a half-dozen times."

The day of the report, AMC stock rose 10 percent to $3.625 a share.

Such rumors are flourishing in part because of the Chrysler-AMC talks concerning possible Omni-Horizon production at Kenosha. AMC already has agreed to build rear-drive standard-size cars for Chrysler at Kenosha.

But a Chrysler-AMC linkup also is a frequent conversation topic because such a marriage appears to make sense for both firms.

Chrysler needs plant capacity, while AMC has no definite plans for its Kenosha facility beyond 1989 and still has not decided whether to continue operations at its Toledo plant.

"For Chrysler it would be a bargain," said one source. "Chrysler would be buying capacity at a dollar amount it couldn't duplicate anywhere else."

Chrysler's immediate goal is to find a home for its Omni-Horizon, still selling well but set for phaseout at its Belvidere, Ill., plant in March.

"Chrysler is definitely looking for another plant," said Philip Fricke, an auto analyst with Goldman Sachs. "It will have nine weeks or so of Omni-Horizon production plus whatever they've got in inventory to begin the year with — and that's it.

"And until the Diamond-Star (joint venture with Mitsubishi Motors in Illinois) comes on stream, Chrysler doesn't have anything to offer in that market."

One analyst said Chrysler would be able to take better advantage of AMC's capacity if it bought a small equity in AMC. Such a deal also would help AMC's cash flow.

"The only way to look at it positively is if Chrysler were to take an equity interest in AMC, enabling them to utilize a more flexible amount of AMC capacity," said Doug Laughlin, an auto analyst with Dean Witter Reynolds. "Doing it piecemeal isn't flexible enough."

Chrysler also covets AMC's Jeep operations.

"Jeeps would complement our line of trucks," said a Chrysler insider. "They are pretty much in the mid-size range and the only conflict right now would be with our new Dakota pickup."

At least one AMC dealer was in favor of a Chrysler buy-out.

"It would give us more stability and better credibility," said Joseph Ricci, a Detroit-area AMC dealer.

New incidents lead to call for halt in Audi 5000 sales

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The New York attorney general's office has asked Audi of America to stop selling the Audi 5000 equipped with automatic transmissions in the state.

The action followed two more reports of unintended acceleration, this time in cars equipped with the transmission interlock designed by Audi to stop the problem.

A spokesperson for Attorney General Robert Abrams said the request was made last week after investigators from his office and NHTSA, as well as investigators and attorneys from Audi, analyzed the accidents.

The attorney general's office asked Audi to halt the sale of the model until a NHTSA investigation is completed in December. It also asked Audi to warn the public that unintended acceleration can occur even with the interlock device installed.

The latest incidents came after the company issued a voluntary recall for more than 200,000 vehicles, from the 1978 model year to the present, to fix the problem.

In March, Abrams and the Washington, D.C.-based interest group Center for Auto Safety called for a full NHTSA investigation of the Audi 5000 equipped with the automatic transmission.

Last week, the center sent a letter to NHTSA Administrator Diane Steed which said that its files show that the 1978- through 1986-model Audi 5000s "now account for 750 accidents, 250 injuries and six deaths."

"This year alone, nearly 200 accidents, over 100 injuries and three deaths have occurred in runaway Audi 5000s, including 40 accidents" since the formal NHTSA investigation was announced on Aug. 15, the center said.

An Audi of America spokesman said the company is investigating the situation. He said that Audi has not yet been able to determine whether a halt in sales is justified and that such a decision could not be made on the basis of the two latest accidents.

NHTSA: 1978- through 1986-model Audi 5000s "now account for 750 accidents, 250 injuries and six deaths."

In one of them, he said, the events did not fit the pattern of unintended acceleration. He said Audi has not had a chance to examine the car in the other incident.

The first accident occurred on Oct. 30, two days after the interlock device was installed on the car.

Automotive News was unable to confirm the details of either accident. But in the first, the driver, Steven Hornick, apparently shifted the car into drive and the car lurched forward, hitting another vehicle. Hornick, in a letter to the Center for Auto Safety, said his foot was on the brake at the time.

The second accident occurred a day later in East Hampton. Mrs. Joel Appel's Audi 5000 accelerated suddenly when shifted into drive, hitting another vehicle.

The spokesperson for the attorney general confirmed that the interlock was working in the Hornick instance and said the second accident remained under investigation.

The Audi spokesman said Hornick apparently selected the wrong gear.

The interlock device installed by Audi requires drivers to have a foot on the brake before the car can be shifted into drive from either park or reverse.

In the letter to NHTSA, Dan Howell, a member of the Center for Auto Safety's staff, called on NHTSA to "stop dragging its feet" and complete the investigation and recall the Audi 5000s.

Audi has maintained throughout the rash of reports that it has found nothing mechanically or technically wrong with the vehicles and that driver error seems to be the cause of most of the incidents.

NHTSA would confirm only that it sent its investigators to study the accidents.

Starline RV Co., Albion, Ind., expanded its 1987 van conversions to five packages. Shown is its top-line Select Series package with oak trim, premium door panels, velvet seating and Sony stero.

RV shipments up for month, year

Van conversions take nearly half of total

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Van conversions continue to fuel the RV industry and now account for nearly half of all RV shipments.

RV manufacturers wholesaled 28,800 units in August, up 4.7 percent from a year earlier, according to the Recreation Vehicle Industry Association.

Of those shipments, van conversions accounted for 13,500 or 46.9 percent of the industry's total.

Towable RV shipments of 9,800 accounted for 34.0 percent of the industry's total; motor home shipments of 5,500 accounted for 19.1 percent.

Van conversion shipments in August were up 12.5 percent over the year-earlier month, while towable RVs were up 1.0 percent. Motor home shipments were off 5.2 percent, according to RVIA.

Year-to-date shipments for the industry totaled 268,900, up 4 percent from last year, with van conversion shipments of 131,300 up 13.6 percent.

Van conversions accounted for 48.8 percent of industry shipments for the first eight months of 1986, with towable RVs accounting for 34.1 percent; motor homes, 17.1 percent.

Recreational Vehicle Wholesale Shipments

	August 1986	August 1985	% change	8 months 1986	8 months 1985	% change
Travel trailers	6,200	5,900	+ 5.1	61,300	60,600	+ 1.2
Folding camping trailers	3,000	3,200	– 6.3	25,000	26,300	– 4.9
Truck campers	600	600	0.0	5,300	5,200	+ 1.9
Towable RV total	9,800	9,700	+ 1.0	91,600	92,100	– 0.5
Conventional (type A)	2,700	2,900	– 6.9	22,200	24,200	– 8.3
Van Campers (type B)	300	400	–25.0	4,100	5,200	–21.2
Chopped vans (all)	2,500	2,500	0.0	19,700	21,400	– 7.9
Motor home total	5,500	5,800	– 5.2	46,000	50,800	– 9.4
Van conversions	13,500	12,000	+12.5	131,300	115,600	+13.6
TOTAL ALL RVs	28,800	27,500	+ 4.7	268,900	258,500	+ 4.0

Source: Recreational Vehicle Industry Association

Seasonally adjusted, August shipments represented an annual rate of about 360,000 units, RVIA said, while the year-to-date total indicated shipments are at a 380,-000-unit pace.

Consumer attitudes toward purchases of all types of vehicles have receded somewhat in recent months, but remain at very favorable levels, according to the University of Michigan's August consumer survey.

Overall, the index of consumer sentiment measured 94.9, down slightly from July's reading, but ahead of the 92.4 recorded a year earlier.

Lower interest rates and lower levels of inflation are credited to a large extent for the favorable consumer attitude.

The University of Michigan's Survey Research Center also measures consumers' intentions about renting or buy an RV, and there has been an upward trend for both sales and rentals during 1986.

In August, van chassis shipments — i.e., Detroit manufacturer shipments of vans with the seat delete option for use in future van conversions — tapered off because August traditionally is a model-year changeover month for all four chassis suppliers.

RVIA elects officers, readies for big show

RESTON, Va. — The Recreation Vehicle Industry Association has elected officers and assigned a record amount of exhibit space for its 1986 RV Trade Show in Atlanta Dec. 2-5.

The association will launch an industrywide fund-raising campaign as part of its RV Market Expansion Program at the Atlanta show. It has a three-point fund-raising program to raise half of the nearly $1 million it wants to help expand the RV market in 1987.

It also has scheduled an all-day seminar Nov. 20 on federal motor vehicle safety standards for van conversion firms. The seminar will be at the Dulles Marriott Hotel near RVIA's Reston headquarters.

The new chairman of RVIA is Don Cuzzocrea, president of Starcraft. He formerly was first vice chairman.

John Casey, president of Shurflo/Shurtron, was elected first vice chairman; Allen Yoder, president of Jayco Inc., was elected second vice chairman; Mel Adams, vice president and general manager of Coleman Co.'s RV Group, was elected secretary; and Steven Decker, president of Skamper Corp., was re-elected treasurer.

The five officers form the executive committee with immediate past chairman Gene Stout, executive vice president of Coachmen Industries Inc.; RVIA President David J. Humphreys; and RVIA General Counsel Jerome C. Loftus.

RVIA also elected six industry officials to its 21-member board of directors for three-year terms.

Newly named were Robert Froschauer, executive vice president of operations and president of the RV Division of Holiday Rambler, as at-large representative; Gary D. Lukehart, president of Trail Wagons Inc., as Western van conversion representative; and David Utick, executive vice president of Hehr International Inc., as Western supplier representative.

Re-elected were Elden Smith, vice president, RV Group, Fleetwood Enterprises, as at-large representative; Gerald R. Wannamaker, president of Domestic Sales Corp., as Eastern supplier representative; and John Zimmerman, president of Sunline Coach, as Eastern truck camper representative.

Meanwhile, RVIA's 1986 National RV Trade Show in Atlanta will be the largest ever, with 529,-044 square feet of exhibit space assigned to RV makers and suppliers at the national show space drawing.

A total of 470,444 square feet of exhibit space was assigned to 96 manufacturers. About 14,000 square feet are still available.

All supplier exhibit space has been sold. A total of 239 suppliers will exhibit at 586 booths.

RVIA will launch an industry-wide fund-raiser at the show.

The campaign seeks $150,000 in individual and corporate contributions from all segments of the RV industry for its RV Market Expansion Program.

All show registrants will be solicited for contributions to RVMEP.

This is part of a three-point program to fund market expansion.

Effective Oct. 1, RVIA increased manufacturer seal prices and supplier dues to raise $350,000 from its own members for the RVMEP.

An initial $250,000 will come from manufacturers, whose seal prices have been raised. They will pay $2.50 for both RV seals and van seals, which previously cost $1.25 and $2, respectively.

To raise $100,000 from RVIA supplier members, supplier dues went from $1,100 to $1,500.

Major firms make truck-RV deals

Durakon Industries Inc. struck a major deal with Nissan Motor Corp. in U.S.A; Coachmen Industries Inc. sold its Kenco Division to Sparkomatic Corp.; and Winnebago Industries acquired a satellite transmission service firm.

Durakon, the leading producer of pickup truck bedliners, has agreed to manufacture and distribute a Nissan Duraliner to Nissan's 1,100 dealers.

Durakon also will provide sales and marketing support to Nissan's regional parts sales personnel.

Durakon's association with Nissan is part of its goal to have 50 percent market penetration in truck bedliners by 1990, according to Michael Wayne, president, chairman and chief executive officer of Durakon.

Durakon had fiscal third-quarter sales of $22.1 million, up 39 percent from the same period in 1985. Its third-quarter net income of $1.5 million was up 19 percent from a year earlier.

Durakon anticipates a seventh straight year of record sales and earnings in 1987.

Coachmen sold Kenco to Sparkomatic, of Milford, Pa., for $4.7 million.

Kenco Engineering manufactures and distributes accessories for pickups, vans and recreational vehicles. Its products include running boards, pickup truck bed mats, siderails, pass-thru windows and sunroofs.

Kenco will be operated as a division of Sparkomatic, with all manufacturing and assembly operations continued at Kenco's Middlebury, Ind., facility, according to Edward Anchel, president of Sparkomatic.

Sparkomatic manufactures car sound products, radar detectors, CB equipment and floorshifts which are marketed internationally.

Coachmen is a full-line manufacturer of recreational vehicles and has interests in manufactured housing and aftermarket parts and accessories for the RV and manufactured housing industry.

Its third-quarter sales of $83.9 million were up from $76.1 million a year earlier, while profits of $530,641 compared to a loss of $639,471 in the year-ago period.

Winnebago acquired a majority interest in Cycle Video Inc., a satellite courier business specializing in satellite transmission of commercials to TV stations.

Winnebago acquired 80 percent of the voting stock and 100 percent of the non-voting stock of Cycle Video for about $900,000 in cash and an undisclosed amount of Winnebago stock.

Plans call for Cycle Video to construct and install a satellite up-link transmission system and comprehensive video production and duplication facilities by the spring of 1987.

Cycle Video, in Mason City, Iowa, was founded in 1984.

Winnebago earned $5.7 million in its final fiscal 1986 quarter compared to a loss of $861,000 in the last quarter of 1985. Sales of $94.5 million in the quarter were up from $91.5 million a year earlier.

Sales of $373.8 million for the 1986 fiscal year were off from $424.2 million in 1985.

Full-year earnings of $19.7 million were up from $18.1 million in fiscal 1985.

Price rules today's market, van customizer declares

The Detroit Camper & Travel Trailer Show closed its nine-day run at Cobo Hall Nov. 2, with a strong consumer response.

Automotive attendees included Les Stanford Truck & RV Center, a Dearborn Chevrolet dealership, and Jim Riehl's Roseville Marine & RV Center, a Chrysler-Plymouth dealership.

Absent, though, were van customizers of previous years.

Advanced Creations, of Romulus, Mich., had the only customized van display.

Bob Wolf, president of Advanced Creations, said the show has always generated a "a lot of good orders for us."

TRUCKING TRENDS

JOSEPH BOHN

Advanced Creations turns its show customers and leads over to its area dealers, like Garrity Dodge in Hamtramck, Varsity Ford in Ann Arbor and Mark Chevrolet in Wayne.

Wolf felt competitors had poor show results because they hadn't manned their exhibits properly.

His firm has two or three salespeople working its exhibit full time.

Advanced Creations is having a good year. Wolf expects to sell about 1,000 customized vans this year, up from 800 in 1985.

He said this year's three hottest selling items are "price, price and price."

"We went through a period where everybody upscaled themselves to the point where consumers were left in the dust. Now everybody is back to reality," he said.

Some 95 percent of Advanced Creation's units now retail for $17,-000 to $18,000 rather than $25,000 to $30,000.

It has a bailment pool arrangement with Chrysler and relies on drop-ship units for Ford and Chevy vans.

Wolf's biggest markets are Detroit, Kansas City and Boston.

Meanwhile, the RV market is prospering in Michigan.

Timothy J. De Witt, executive director of the Michigan Association of Recreational Vehicles and Campgrounds, estimated that about 100,000 people visited the show, which featured 500 vehicles from 34 dealers and manufacturers.

The state's RV sales are running ahead of last year's, according to Statistical Surveys Inc., of Grand Rapids, Mich.

Michigan RV registrations of 7,-786 in calendar 1986 through August are up 4.1 percent from a year earlier.

Thomas Walworth, president of Statistical Surveys, said that included 1,893 motorized vehicles, up 1.0 percent from last year, and 5,893 non-motorized, up 5.2 percent.

TRUCK INDUSTRY

Dina denies shutdown report, but asks Mexico for help

By Emil Zubryn
SPECIAL CORRESPONDENT

CUERNAVACA, Mexico — Diesel Nacional denied rumors it was considering a temporary shutdown and layoff of 4,500 employees.

But in a report to the Ministry of Programming and Budget, management admitted that most of the 10 firms making up the Dina complex are operating with obsolete equipment. It has asked the government for help.

That is true of a lot of non-engine-related component technology in its bus production.

The Ministry of Commerce also denied reports of Dina associating itself with General Motors for the production of trucks and engines, citing restricted demand for the products in the Mexican market.

Dina appears unlikely to make any major technological advances in the foreseeable future because of its lack of investment capital.

With a declining market and high production costs, Dina has considerable financial problems. It has to service a foreign debt of $350 million.

It is operating at 30 percent of capacity, its lowest level in 15 years.

In a bid to keep the company afloat, Dina officials asked the Mexican government to take over its liabilities.

They said the company is spending 53.3 percent of its revenue to service its foreign debt, leaving only 46.7 percent for its operations.

In its report to the government, Dina said it was restructuring to consolidate its operations.

The plan includes plant modernization, adoption of new technology, an increase in investment for its profitable Motors Perkins affiliate to help it introduce a new engine line and the sale of parts of its operations.

The company plans to put Dina Komatsu and Dina Rockwell up for sale. Maquiladora Automotriz Nacional (National In-Bond Automotive Co.) also will be liquidated. The firm is not in operation at this time.

Dina has made some technological improvements that give it potential export capability to U.S. and Latin American markets.

Motor Diesel Mexicana and Dina Cummins have been modernized.

However, they lack the money to undertake such foreign sales expansion. The lack of liquidity of some Latin American countries also has Dina cautious about exporting to them.

The company plans to adapt to internal and international market conditions, but it said it needs the full financial assistance of the Mexican government to do so.

Light trucks off for Oct.; year-to-date ahead of '85

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

October light-truck sales were down 3.7 percent from last year's record high. But considering the pull-ahead factor of heavy finance incentives which ended last month, it was a strong start for the 1987 model year.

The light-truck manufacturers retailed 340,672 units in October compared to 353,911 a year earlier.

Their calendar-year-to-date total of 3,927,568, up 6.2 percent from last year, continues to be on target for a record in 1986.

Jeep and the imports continued to set records in October.

Jeep's October sales of 20,630 were up 9.1 percent from a year earlier.

Import truck sales of 64,669 units were up 6.5 percent from last year's previous monthly high.

Among the importers, Toyota, Mazda, Isuzu and Suzuki established new highs.

The addition of two truck lines, the Dakota and Raider, to its sales total helped Chrysler manage a small increase over last year. It retailed 48,466 trucks in October compared to 48,247 a year earlier.

Ford light-truck sales were off 4.0 percent in October.

Its Aerostar, firmly established as the best-selling nameplate in the minivan market, and the restyled F-series helped offset some of the decline in its other truck lines.

The F-series pickups, with an 8.2 percent sales gain, are off to a modest start.

Chevrolet's carryover full-sized pickup models had a 26.8 percent sales gain for the month; GMC's full-sized pickup sales also were up strongly.

Ford's overall light, medium and heavy sales of 101,728 were down 4.8 percent for the month.

Chevrolet's light-truck sales of 87,178 were down 12.3 percent in October.

Chevrolet's total light- and medium-duty sales of 88,727 were down 12.9 percent.

Similarly, GMC's total light-, medium- and heavy-truck sales of 23,978 were down 14.9 percent.

Light-duty GMC sales of 22,189 were down 11.2 percent, with its Safari compact van, full-sized vans and pickups turning in the strongest performances among its lines.

NEIL SOBRIETY FAILSAFE

The only drug, alcohol, theft and stress inhibitor in the world.

*Neil * is a patented and computerized, on board electronic fail-safe system that determines the REFLEX-ALERTNESS of a driver.*

The "NEIL"* is multi-functional

- Approved by California's new law, Bill #3939
- Automobile anti-theft device
- Emergency alert-Attack deterrent
- DUI inhibitor (alcohol or drugs)
- Reduce your insurance rates

As an ignition interlock, "NEIL" * tests and analyzes the Reflex-Ability of the driver, inhibits the starting of the car when the driver fails to meet HIS OWN previously tested Reflex-Norm.

Exclusive distributorships available world wide.

October deliveries climb 4.7%

Imports set record; domestics advance, too

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Combined domestic and import new-car sales in the United States last month totaled 905,098, a 4.7 percent increase over the October 1985 total of 864,664.

The slight increase was recorded in a feast-and-famine month for the domestic makers, as the annual percentage rate finance incentives ended during the first 10-day period. It was the best October ever for import sales.

The manic early October domestic sales, which fell sharply at midmonth, settled into post-incentive marketplace ennui in the final 10-day period of the month.

The domestic makers sold 247,623 cars in the Oct. 1-10 period, as the APR programs wound down. In the Oct. 11-20 period sales plunged 32.8 percent 166,446.

During the Oct. 21-31 period, sales fell 6.4 percent to 218,739 from 233,671 last year.

Buoyed by the APR incentives, which ended early in the month, total domestic new-car sales for October reached 632,546 — 5.7 percent above the 598,399 cars sold in October 1985, but well below the monthly record of 933,713 set in October 1971.

In the final 10-day period, domestic sales recovered somewhat. The final 10-day period traditionally is the strongest part of any month because of dealership-level incentive programs and month-end bookkeeping requirements that encourage stronger performance by sales personnel.

In October, the first 10-day period accounted for more than 39 percent of the month's domestic tally, while the final 10-day period accounted for 34.6 percent.

The import new-car sales total for the month was up 2.4 percent, to 272,552 from 266,265 sold last October. It was the best October ever for imports, and the fourth highest monthly import-car sales total in history, trailing 305,209 in July 1986; 291,952 in September 1986; and 286,194 in May 1986.

Although importers reported a mixed bag of monthly winners and losers, the overall effort was sufficient to push import penetration to 30.1 percent.

A year ago, imports accounted for 30.8 percent of all October sales.

However, for the first 10 months of this year, the APR-fueled sales gains of some domestic makers have kept import penetration to 27.5 percent.

During October, American Motors continued to have its problems, despite the zero APR program that ran the entire month. AMC car sales last month were off 26 percent to 7,308. In the same month last year, without the zero APR program, AMC car sales totaled 9,888.

Sales of U.S.-built Volkswagens were off 15.8 percent in October, to 5,363 from 6,370. Nissan reported that sales of its U.S.-built cars were 6,623, down 4.7 percent.

Meanwhile, however, sales of Honda's domestic models rose 153.5 percent to 27,106.

Chrysler Motors' sales rose 3.7 percent to 102,269 and Ford Motor Co. sales were up 10.6 percent to 155,142.

General Motors, which started that last wild and woolly round of APR incentives with its 2.9 percent "Big One" program, reported a monthly sales total of 328,735, up about one percent from the 325,572 cars it sold in October 1985.

Among GM's divisions, Oldsmobile, Chevrolet and Pontiac were the year-to-year losers, while Buick and Cadillac posted big months.

On the import side of the ledger, 15 makes reported year-to-year sales declines for October. The total was boosted, however, by Acura and Hyundai sales.

Both Acura and Hyundai went on sale this year and thus were not included in last October's tally.

Yugo, which was in the very early stages of U.S. distribution last October, posted a 359 percent sales increase to 4,129.

The other import makes that showed year-to-year sales increases were Alfa Romeo, up 137 percent; Mercedes-Benz, up 129 percent; Isuzu, up 77 percent; Chevrolet Spectrum, up 37.6 percent; Saab, up 30.1 percent; Merkur, up 18 percent; BMW, up 10.2 percent; Peugeot, up 8 percent; Dodge Conquest, up 6.1 percent; Volvo, up 5.5 percent, and Plymouth Conquest, up 4.5 percent.

Carmakers give money to schools

DETROIT — The Ford Motor Co. Fund has given a grant of $500,000 to Oakland University, in Rochester, Mich., for the School of Engineering and Computer Science.

The General Motors Foundation has made a three-year, $30,000 grant to the Society of Manufacturing Engineers Education Foundation. The money will be used to improve basic laboratory instruction in manufacturing.

Monthly estimates may contain error of one or two units due to rounding.

October car production rises 3%

Domestic automakers built 733,499 cars in October, 3.61 percent fewer than the 760,970 assembled in the year-ago month.

October's total was 14.75 percent better than September's 639,199.

The makers scheduled 170,681 cars for assembly last week, about the same (down 0.55 percent) as the previous week's 171,628 and 6.24 percent fewer than the 182,039 built in the year-ago week.

So far this year, 6,733,140 cars have been assembled, 4.66 percent below the 7,061,981 completed last year at this time.

Last week's scheduled production was split as follows: General Motors, 56.20 percent; Ford Motor Co., 21.78 percent; Chrysler Corp., 13.42 percent; Honda of America Manufacturing Inc., 3.26 percent; New United Motor Manufacturing Inc., 2.46 percent; Nissan Motor Motor Manufacturing Co., U.S.A., 1.71 percent; and Volkswagen of America, 1.17 percent.

GM scheduled Saturday (Nov. 8) overtime at Lansing Plant No. 2.

Ford slated daily overtime this week (Nov. 10) at its plants in Wixom, Mich.; Wayne, Mich.; Edison, N.J.; Atlanta; and Chicago.

Saturday (Nov. 15) overtime is scheduled at Ford's Chicago and Atlanta plants.

Chrysler slated two overtime shifts Saturday (Nov. 8) at its plants in Belvidere, Ill.; Detroit (Jefferson); and St. Louis.

Chrysler's plants in Belvidere and Sterling Heights, Mich., are slated to work two nine-hour daily shifts this week. The Jefferson plant is scheduled to operate two 8½-hour daily shifts this week.

Fewer trucks for month

Domestic makers assembled 319,066 trucks in October, 5.96 percent fewer than the 339,284 built in the year-ago month.

They built 1.33 percent fewer trucks in October than in September, when the total was 323,381.

Year-to-date truck production passed 3 million last Friday (Nov. 7), 14 days ahead of 1985.

So far this year, 3,062,565 trucks have been assembled, 3.24 percent more than the 2,966,502 built last year at this time.

Last week, 72,176 trucks were scheduled for production, 2.91 percent more than the prior week's 70,133, and 1.44 percent more than the year-ago week's 71,151.

General Motors slated Saturday (Nov. 8) overtime at its plants in Flint (No. 1) and Pontiac, Mich.; and St. Louis.

Ford Motor Co. has scheduled daily overtime this week (Nov. 10) at its plants in Lorain, Ohio; Louisville, Ky.; and St. Louis.

Ford slated Saturday (Nov. 15) overtime at Louisville.

Chrysler Corp. slated two overtime shifts Saturday (Nov. 8) at its Warren, Mich., plant. The Warren plant is scheduled to operate two nine-hour daily shifts this week.

900,000th car for Canada

Canadian automakers built their 900,000th car of the year last Thursday (Nov. 6), one week behind 1985.

So far this year, 900,944 cars have been assembled, 4.04 percent below the 938,836 completed last year at this point.

Car production for October totaled 107,705. It was 17.54 percent more than September's 91,632 but 1.47 percent below the 109,307 produced in October 1985.

Last week's targeted output of 25,700 cars was 2.34 percent more than the previous week's 25,113 and 14.44 percent more than the year-ago week's 22,458.

Downtime at one General Motors plant and one Ford Motor Co. plant contributed to a decline in truck production for October.

Truckmakers assembled 52,739 units, 12.15 percent below September's 60,037 and 22.20 percent below the total of 67,785 in October last year.

Scheduled production of 10,099 trucks last week was 4.54 percent below the previous week's 10,579 and 43.64 percent below the year-ago week's 17,918.

Year-to-date, 685,622 units have been built, 6.10 percent below the 730,186 assembled last year at this time.

Ford Motor Co.'s Ontario truck plant in Oakville resumed output last week (Nov. 3). The plant had been idle for two week's for model changeover.

OSHA slaps Chrysler on injury data

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Occupational Safety and Health Administration has cited Chrysler Motors' Belvidere, Ill., assembly plant for allegedly failing to report employee injuries.

The company faces a possible $910,000 fine.

OSHA cited Chrysler after an investigator found discrepancies in the company's injury records dating from January 1985 through April 1986. According to OSHA, the inspector, who was investigating a death at the plant, noticed that records indicated an unusually low number of reported injuries for a plant with 3,900 workers.

The agency said it found 182 instances of work-related injuries, including 133 workers' compensation cases, that had not been recorded as required by law. OSHA proposes a $5,000 fine for each of the alleged violations.

Chrysler issued a statement from Dr. Robert H. Brandt, director of the company's occupational safety and health services, that said:

"Although we haven't had an opportunity to review the OSHA charges, we believe that these findings are based on an interpretation of government guidelines on the handling of paperwork. The OSHA charges have to do with record keeping rather than in-plant practices which cause accidents or injuries. Chrysler has an excellent health and safety program in all its plants."

The company has 15 working days, which would be late November, to contest the citations and the proposed penalties. A Chrysler spokesman said the documents were being reviewed and that the company had not yet decided whether to contest the charges.

If the company does not contest the matter, the penalties would be ordered. If Chrysler decides to contest the OSHA charges, the issue will be settled by an administrative judge.

The citations charge Chrysler with willful violations, which OSHA defines as those in which an employer either knew that what was being done constituted a violation or was aware that a hazardous condition existed and made no reasonable effort to eliminate it.

The agency has conducted eight previous inspections of the Belvidere plant, with a similar record-keeping violation reported in 1975.

IMPORT STALL

Days' supply is highest in 4 years

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

The days' supply of imported cars on Nov. 1 was the highest in almost four years.

A decline in October's sales rate brought the Nov. 1 inventory to a 42-day supply, the highest since the 54-day stockpile on Jan. 1, 1983.

On Oct. 1, the supply was 36 days, and on Nov. 1, 1985, it was 28 days.

Although many of the popular imported makes remain in short supply, the number of unsold cars has risen as importers have built up stocks for the new model year.

October sales dipped a bit from September's, and there were two more selling days in October than in September, which further cut the daily selling rate. Figures on days' supply are based on the selling rate for the most recent month.

November opened with an inventory of 425,608 imported cars, according to Automotive News estimates. On Oct. 1, the total was 391,724, and on Nov. 1, 1985, it was 276,006.

The number of new imported trucks on hand rose to 186,825 on Nov. 1, compared with 156,731 on Oct. 1 and 97,597 on Nov. 1, 1985.

Truck inventories represented a 69-day supply on Nov. 1, up from 46 a month earlier and 39 a year earlier.

The combined car and truck stockpile on Nov. 1 totaled 612,433

Falling profits in U.S. force Toyota cutbacks

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

TOYOTA CITY, Japan — Toyota Motor Corp. is mounting an intensive cost-cutting drive as it combats yen-dollar exchange rates that have slashed company-wide profitability by two-thirds.

President Shoichiro Toyoda says TMC's Torrance, Calif.-based subsidiary, Toyota Motor Sales U.S.A., is still operating profitably.

But the roughly 50 percent appreciation of the yen against the dollar in the past year has reduced U.S. profits so much that the parent company's profit level projected over the fiscal year ending June 30, 1987, is two-thirds lower than previous-year earnings, said Tsutomu Ohshima, executive vice president-external affairs.

Toyota set up a new standing committee Oct. 13 under Vice Chairman Gentaro Tsuji to coordinate economy efforts and implement the measures after review by the board of directors.

Several are conventional short-term cost-savings tactics like reducing overtime and new hiring, and trimming 1987 capital spending. Most of these conventional

GM and Ford plan production cuts in fourth quarter

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors has scaled back its fourth-quarter production schedule by about 8 percent from its September forecast, apparently in an effort to avoid costly financing incentives.

Ford Motor also has trimmed its schedule by about 8 percent from its September estimate, but the company said it was due to component shortages. Chrysler Motors and American Motors have not changed their fourth-quarter projections.

The four companies combined will produce 120,124 fewer cars in the fourth quarter than they had planned in September. The companies now plan to build 1,783,356 cars in the fourth quarter. The schedules they made in September called for 1,903,480 cars to be built in the fourth quarter. The revised schedule means the four companies will produce 4 percent fewer cars in the fourth quarter of 1986 than they did in the fourth quarter of 1985.

General Motors is leading the pack in production cutbacks. It has pared its fourth-quarter production schedules by 8 percent. GM will produce 1,045,056 cars in the fourth quarter. Its September schedule called for 1,129,880 cars to be built.

GM's present plans mean it will build 11 percent fewer cars in the fourth quarter of this year than in the fourth quarter of 1985. GM built 1,167,931 cars in the year-ago fourth quarter.

GM apparently is holding to the promise it made at the start of the model year that it will cut back production before it offers costly incentives on 1987 models.

GM was forced into a 2.9 percent financing program to get rid of the 1 million 1986 vehicles in its inventory before the start of the new model year. The costly program, which ran from Aug. 28 to Oct. 8, contributed to GM reporting a $338 million operating loss in the third quarter.

Because of slow sales, GM has cut the hourly production rate of the Buick LeSabre from 75 units

Auto chiefs see reduced sales in '87

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

New-car and truck sales in the United States next year will be 700,000 to one million units less than in 1986, according to chief executives of the nation's three leading a. o companies.

Nearly all of the decline will be in the car market.

Roger B. Smith, General Motors chairman, pegs industry sales in 1987 at 15.3 million units, comprised of 10.6 million cars and 4.7 million trucks.

The 1987 predictions of Ford Motor Co. Chairman Donald E. Petersen and Chrysler Motors Chairman Gerald Greenwald are identical: 15.0 million units, including 10.5 million cars and 4.5 million trucks.

Sales in calendar year 1986 are expected to approximate 16 million units, including nearly 11.5 million cars and more than 4.5 million trucks.

The executives voiced their opinions in this week's Talk From the Top Extra, Automotive News' one-on-one interviews with five of the world's leading auto company officials. Others interviewed were Jacques Calvet, chairman, Peugeot SA, France; and Tadashi Kume, president, Honda Motor Co., Japan.

Noting that "with 2.9 percent car financing, 1986 turned out to hit all kinds of records," Smith said he is reasonably confident 1987 will be a strong year.

But GM's chairman added: "Maybe we'll see a little drop-off in trucks and more in cars."

Offshore investment in Canada seen as possible mixed blessing

By Jim Kenzie
STAFF CORRESPONDENT

TORONTO - When the first Accord was assembled Nov. 4 in Honda's new plant in Alliston, Ontario, it ushered in a new era in Canadian car production.

Alliston is not the first Canadian plant to build Japanese cars. Toyota assembled Corollas in Nova Scotia during the late 1960s and early 1970s.

News Analysis

But Alliston is the start of a new wave of offshore investment that by the early 1990s will increase Canadian car-making capacity by more than 400,000 cars — roughly a 30 percent increase.

All of that added capacity will be owned or managed by companies with operations bases outside North America. The scorecard looks like this:

- Honda, 80,000 Accords and Civics at Alliston, Ontario.
- Toyota, 50,000 Corollas at Cambridge, Ontario.
- Suzuki-General Motors joint venture, 200,000 subcompact sedans and sports-utility vehicles at Ingersoll, Ontario.
- Hyundai, 100,000 upscale, front-wheel drive sedans at Bromont, Quebec.
- Under discussion is a joint venture between Daihatsu of Japan and Bombardier, a Canadian manufacturer of snowmobiles, to assemble microcars, probably in the Montreal area.

There are also several components plants, either in place or in the planning stages.

But in no one's wildest dreams will the Canadian car market grow by a corresponding amount in the intervening years. Where, then, will all the extra cars go?

That is the question raised by Moe Closs, president of Chrysler Canada Ltd. "Some of these offshore producers may think they will be able to ship some of this

Audi seeks to boost image with ad blitz

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Audi of America has launched its most aggressive and expensive model-year advertising campaign amid widespread publicity over its cars' problems with unexpected acceleration.

Bruce Butzier, Audi of America advertising manager, said the current advertising blitz is not designed to address the acceleration problem but to position Audi as one of the "Big Three" German luxury automakers, along with Mercedes-Benz and BMW.

The campaign, called "You're ready for an Audi," names Audi as an alternative to BMW and Mercedes-Benz. Ads will compare pricing and handling.

Audi has increased its advertising budget 25 percent for the 1987 model year, and has placed a heavy emphasis on print. Television advertising will be heavy during the launch period; Audi's fourth-quarter ad spending will increase 60 percent this year.

Though company spokesmen refused to give ad budget numbers, Advertising Age estimates that Audi spent $35-40 million in the 1985 calendar year. Audi spokesmen said its budget will rise $8-10 million in the 1986 calendar year.

Audi's advertising campaign is part of a new marketing strategy designed to boost its image amid reports that some Audi 5000 models equipped with automatic transmissions accelerate unexpectedly.

Audi recalled 200,000 Audi 5000-S units equipped with automatic transmissions in July to install a shift-locking device. Audi said it has been unable to find any mechanical cause for the unexpected-acceleration problem and that most of the incidents are due to driver error. NHTSA is investigating the problem in Audis and other makes. The New York attorney general's office has asked Audi to stop selling 5000s with automatics in the state (Automotive News, Nov. 10).

Increased competition and publicity surrounding the problem are affecting sales. An Audi executive predicted in mid-July that 1986 sales will drop to the mid-60,000 range from 74,061 in 1985.

An ad designed to position Audi as one of the "Big Three" luxury German automakers

To demonstrate Audi's performance, DDB Needham, Audi's advertising agency, has created several television and print advertisements which show the Audi 5000 operating in adverse conditions such as snow, rain and on dirt roads.

In one television spot, the Audi 5000 Turbo Quattro moves quickly in the left lane of the German autobahn during a rainstorm while BMW and Mercedes-Benz models pull aside to slow down. The ad closes, "If it rains where you live, you're ready for an Audi."

In another spot, the Audi 5000 Turbo Quattro climbs a snow-covered ski jump with a 37-degree incline. The ad ends with, "If you're wondering what it can do on a dry highway, you're ready for an Audi."

Audi's dealer advertising spots follow the "You're ready for an Audi" tagline with "and your Audi dealer is ready for you."

Butzier said the Audi 5000 will be used in all national advertising this model year, until the new 4000 series (code named the B-3) is introduced in fall 1987.

Dodge exec to head Audi

Damoose

TROY, Mich. — Volkswagen of America last week named John B. Damoose, former general marketing director for Chrysler Motors' Dodge Division, to the top spot at Audi of America.

Effective today, Damoose replaces Peter Fischer as vice president in charge of the troubled Audi division.

Fisher has been offered a position with responsibility for group advertising, sales promotion and training at Volkswagen AG's world headquarters in Wolfsburg, West Germany.

Fisher has not yet accepted the offer.

"Things happened so fast he hasn't had a chance," said a VWoA spokesman.

Damoose joined Chrysler in 1982 as national merchandising manager for Dodge. In 1984, he was named the division's general marketing manager.

Prior to coming to Chrysler, Damoose put in 10 years at Ford Motor Co., where he held several sales and marketing positions with Lincoln-Mercury Division from 1973 to 1981. In 1981, he was promoted to marketing strategy manager for North American Automotive Operations.

At Audi, Damoose will report to Noel Phillips, president and chief executive of VWoA.

No other executive changes will be made in connection with the Damoose appointment, a VWoA spokesman said.

A Chrysler Motors spokesman said it is not known when a new marketing director for Dodge cars will be named.

"I've heard he's a fast tracker, a high riser," a VWoA spokesman said of Damoose. "We're very impressed with the guy. We're extremely optimistic about the job he'll do."

Damoose will be charged with reversing a year-long sales slide at Audi. Audi sales peaked in 1984 and 1985, when the division's U.S. retail deliveries topped 70,000. But sales have fallen nearly 15 percent in 1986; meanwhile, competing makes have enjoyed increases.

Audi's image has been tarnished greatly in recent months, mainly due to reports of unexpected acceleration from drivers of the division's flagship model, the 5000-S.

Some of the blame for Audi's troubles landed on the shoulders of Fischer, who was chiefly responsible for the division's marketing and public image.

Fisher agreed to be reassigned last month, following discussions between Phillips and Audi AG Chairman Wolfgang Habbel.

At the time, Habbel was in the United States for a series of meetings with dealers to reaffirm Audi's intention to continue its U.S. presence.

Ford benefit program has goal of 25% cut in salaried workforce

By Dave Zoia
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. will offer some North American white-collar staffers up to two years severance pay, extended medical benefits and job search assistance if they volunteer to quit or retire early.

Ford adopted its "golden handshake" plan last month to help make significant cuts in the size of its salaried staff.

The company's goal is to eliminate 25 percent of the more than 50,000 white-collar jobs throughout its North American Automotive Operations by 1989-90. The company already has slashed its salaried head count by about 25 percent during 1980-85, chiefly through normal attrition and layoffs.

This latest round of staff reductions also will be accomplished in part through routine attrition. But Ford is counting on its new voluntary termination program to trim employee rolls further, while avoiding morale-draining layoffs.

"When you have layoffs, there are a number of negative connotations," said W.J. Fish, Ford's manager of management development and personnel recruiting. "First, it's an involuntary thing. It creates an atmosphere of low morale — even among those not affected.

"Then there's a recall obligation and that's not good either," Fish said. "Finally, it is essentially based on seniority. You have to let people go that you've just hired.

"And those are the people that represent the next generation of management 10 to 15 years out."

Ford adopted the voluntary program last month after a successful pilot run in a handful of departments during the past year. About 100 employees opted for voluntary termination during the trial run.

"The pilot program was very well-received," Fish said.

Potentially, the Ford plan is available to all white-collar workers, regardless of age or length of service. But the voluntary termination must be agreeable to both employee and management.

"We simply have to have the ongoing body of salaried employees contain the right mix of ages," Donald E. Petersen, Ford chairman, said in a recent interview. "There's a need to eliminate a lot of positions at the middle levels," he added. "It won't be helpful if we go some route that eliminates all the young people who have fresh skills and keep all the people who aren't showing potential to grow and progress."

According to an internal Ford memo, white-collar workers who terminate under the plan are eligible for the following benefits:

- Between one month's and two years' pay as severance, depending on length of service.
- Continuation of medical and life insurance coverage from one month to one year, also depending on length of service.
- Special early retirement for those who qualify.
- Re-employment assistance.

The chief restriction is that a job position must be eliminated for the terminating employee to qualify for full benefits. However, a worker who quits or retires early from a position that will have to be refilled may only qualify for reduced benefits.

Although Ford plans to trim its white-collar staff throughout its organization, some departments may not offer the program at all.

"Each operation has to do its own manpower planning," Fish explained. "There may be some that never will offer the voluntary termination plan because attrition will take care of the surplus."

Fish stressed the program's voluntary nature. But there could be a few instances where employees with little potential for advancement may be advised to consider the termination plan, he said.

In some cases, employees judged too valuable will not be permitted to quit or retire under the program.

"The voluntary termination plan is a management-driven plan and management reserves the right of refusal," Fish said.

Ford is expected to begin phasing in the program within the next month or two, as each department determines the number of positions it will need to eliminate during the next four years.

Each department is expected to offer the plan only once annually. Ford white-collar workers currently on layoff will not be eligible.

Fish said he wasn't sure what the program would cost Ford.

"I don't know what the final cost will be, because we don't know how many people will participate," he said.

Fish said the Ford program was different from plans offered by other companies, chiefly because it gives department heads four years to map out personnel strategies.

U.S. model count declines to 289 for 1987

Big 3 trim lineups; industry down 32

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

For the 1987 model year, the Big Three have chopped 45 models out of their passenger-car lineups.

Elsewhere, there was an aggregate gain of 13 by American Motors and the four foreign firms that assemble cars in this country.

The annual Automotive News compilation found 289 domestic models on the market for the new season, a decline of 32 from the 321 offered in the 1986 model year.

The 1987 lineup is not yet complete. Still to come are Chevrolet's Corsica and Beretta and its Camaro convertible; the Dodge Daytona, the Chrysler LeBaron J coupe and convertible and the Oldsmobile 98 Touring Sedan and Toronado Trofeo. There may be more as the campaign moves along.

But for the present, the Big Three have done a creditable job of trimming model totals that ever the manufacturers admit have become unwieldly.

Chrysler Motors made the deepest slashes as it cut its model choices to 34 from 54 a year ago. Ford dumped 11 selections, dropping to 69 from 80. General Motors, which has made the most noise about shaving its model total, was right in the middle with a reduction of 14. GM lists 145 for 1987.

AMC has two more models than it had last year. Volkswagen added a Jetta sedan at its U.S. plant, and Honda now makes a Civic sedan in Ohio. Nissan expanded its lineup of Tennessee-built Sentras, and Toyota has its first U.S.-made car. It is a Corolla from New United Motor Manufacturing Inc., the GM-Toyota joint venture company.

There are new nameplates for 1987, and a number of familiar labels have disappeared. Plymouth Sundance and Dodge Shadow have entered the market, and Cadillac Allante has ben previewed and ballyhooed, although it's not yet on sale. Jetta, Civic and Corolla are new as U.S.-built cars.

Renault Encore bowed out for 1987; all Renaults made in this country now carry the Alliance tag.

Chrysler Laser has departed and so has the Chrysler limousine. Mercury scuttled the sporty Capri line, and the Ford LTD and the Mer-

see MODELS, page 29

Mack chief calls GM a casualty

Curcio details his company's plan for '90s

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

ALLENTOWN, Pa. — John B. Curcio, chairman of Mack Trucks, views General Motors as the first casualty in the highly competitive heavy-duty truck market. He also regards the GM-Volvo venture as a "non-event."

Speaking at a dinner marking delivery of the one-millionth Mack truck, Curcio said the GM-Volvo deal will allow GM to get "out of the heavy-duty truck business" in a "convenient way to minimize (dealer) lawsuits."

"They're giving the outlets a choice," he said. "It's a convenient way to give the better GM dealers a product to sell after they discontinue their heavy trucks."

He reiterated the belief that another maker of heavy trucks would follow suit and effectively get out of the business, given the market's size and number of players.

Meanwhile, Mack is continuing to position itself for the the 1990s.

It is finishing the second year of a five-year, $400 million capital investment program. That money is being spent on new product and increased productivity efforts through new manufacturing technology and upgraded information systems.

Mack is investing in CAD/CAM systems and information systems and parts distribution and customer ordering for parts — "the whole information system of the company," Curcio said.

It also has been closing some plants, relocating the operations of others to a new facility and outsourcing components.

The company also has several new developments, including a new engine and an extended warranty program for its product line (see related story).

Curcio said the cornerstone of Mack's restructuring is the new assembly plant it is building in Winnsboro, S.C. The $80 million, 537,000-square-foot facility is scheduled to be completed in late 1987 and will have a daily capacity of 70 trucks.

When the Winnsboro plant is completed, Mack's Allentown 5C assembly plant will be closed. In 1985, Mack closed two Allentown machining and fabricating plants as part of its outsourcing program.

Meanwhile, Mack plans to outsource more components.

Components it previously made at its two closed Allentown parts facilities have gone to Dana and Sheller-Globe.

Curcio said both companies have agreed to locate facilities near Winnsboro in order to implement a "just-in-time" manufacturing operation.

He also said that at least three other companies have agreed to locate facilities near Winnsboro, but he did not identify them.

Mack has sought to find domestic suppliers who can meet its "just-in-time" requirements, rather than going overseas for components. He said Mack always would be a Pennsylvania company.

The company also has been reducing personnel to boost its profitability. It reduced its non-union labor force from 6,000 in 1979 to 3,500 currently.

Curcio said 700 employees accepted early retirement this year. The company's goal is to reduce its workforce by another 10 percent.

Because of that reduction as well as others resulting from plant closures, the company realized a $20 million pretax savings, he said.

Mack is looking for industry Class 8 sales to be about 110,000 to 115,000 in calendar 1986, down from 133,581 in 1985, and to increase slightly next year.

Mack had a consolidated net loss of $44.8 million for the third quarter of 1986, compared with a net loss of $64.6 million for the corresponding 1985 period.

The most recent quarter's net loss included a $33.7 million pretax provision for the company's special early retirement program for non-bargaining employees.

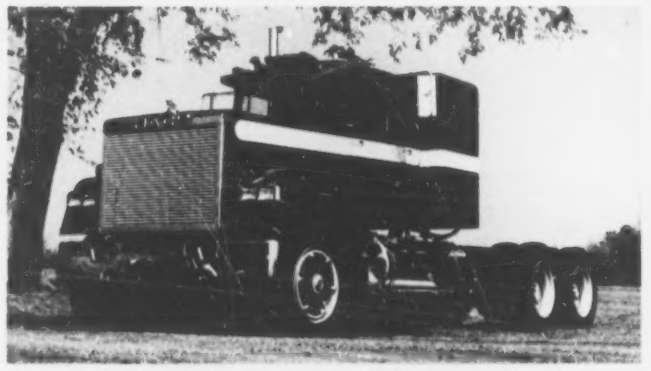
The third-quarter loss included a $70 million pretax provision for the restructuring of the company's vehicle assembly and manufacturing operations.

Net sales in the third quarter totaled $356.2 million, a decline of 17 percent from $428.0 million in 1985.

For the first nine months of 1986, Mack's net loss after extraordinary income totaled $42.0 million, compared with $56.2 million in the 1985 period.

Extraordinary income amounted to $3.4 million and $0.3 million, respectively, for the 1986 and 1985 periods.

Consolidated net sales for the nine months of 1986 were $1.2 billion, down 21 percent from the 1985 period.



The one millionth vehicle produced by Mack since its founding in 1900

Mack offers new diesels, longer warranty coverage

ALLENTOWN, Pa. — Mack Trucks has a new diesel engine series for its heavy-duty trucks and new extended warranties that increase its three-year/300,000-mile coverage to five years or 500,000 miles in some cases.

The new engines, offered under the Maxidyne name, are called Maxidyne Plus.

They are six-cylinder powerplants, available in 250-, 275- and 300-horsepower versions.

The engines, available on new Class 8 trucks, are designed to control torsional vibrations, considered the primary challenge to reducing governed rpm in high-torque-rise engines.

Having solved that problem, Mack is able to offer five- and six-speed overdrive transmissions with the powerplants.

The extended warranty plans will be available Jan. 1.

The plans are being marketed under the "Bulldog Protection Plan" in five packages.

The first package extends Mack's present warranty to five years or 500,000 miles.

A second plan provides coverage of five years or 500,000 miles on parts only.

A third plan extends the present warranty to five years or 300,000 miles and is desgined for customers who do not accumulate mileage at typical rates.

A fourth plan extends the present two year Mid-Liner powertrain warranty on medium-duty highway vehicles to five years or 300,000 miles.

The last plan offers contract maintenance coverage on as much or as little of the vehicle as the customer desires.

SERVICE MANAGEMENT

Electronics gain importance in servicing heavy trucks

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Automobile technicians have had to learn to repair electronic components during the last several years, and diesel and truck technicians will have to acquire the same skills in the near future.

The heavy-truck industry has lagged behind the auto industry in the introduction of electronic engine and vehicle controls. However, new emission regulations and advances in technology are encouraging manufacturers of trucks and diesel engines to incorporate electronics in their products.

For the 1987 model year, Detroit Diesel Allison introduced an electronic engine control system for its Silver 92 Series engines. The Detroit Diesel Electronic Control system has engine diagnostic capabilities that allow a mechanic to plug in a hand-held malfunction reader. Such devices are now common for automobiles.

Freightliner recently introduced an electronic engine shutdown option for its FL-112 Class 8 conventional tractor. The company said the microprocessor-based unit is the first step in its move to introduce electronic control devices.

The use of electronics in lighter commercial vehicles also will increase in the near future, particularly as electronic fuel injection becomes available on gas-powered models.

Caterpillar Tractor Co. plans to introduce a programmable electronic engine control system on its 3406B over-the-road, heavy-duty diesel engine next April.

The programmable system will allow a technician to change such variables as the vehicle's top speed and its cruise-control limit as well as the engine power rating. It will also include a data link that can be attached to trip recording devices, instrument-panel systems and other devices which can take advantage of the control system data.

Caterpillar plans to train its dealer training instructors, dealer technical communicators and truck shop foremen. The instructors

A Detroit Diesel technician uses diagnostic gear

train truck-dealer mechanics, and the communicators are the technical liaison between Caterpillar and its dealers.

Next March or April, the company will conduct 31 field schools to train the instructors, communicators and foremen of its 85 dealers.

Before the Caterpillar personnel attend the schools, they must take an aptitude test and must be trained in basic electrical troubleshooting. The basic training materials are available in the Caterpillar training system, but no formal classes are scheduled.

Frank Kelton, supervisor of the service training area for Caterpillar Engine Division said, "The experience in the auto industry is that not just anybody is equipped to work on electronic systems. With the aptitude test, we will try to manage the selection of electronic engine control technicians."

George D. Aravosis, vice president of marketing, sales, planning for Navistar International Corp.'s Engine and Foundry Division, said, "Electronics will allow technicians to plug in diagnostic equipment and repair an engine in cookbook fashion. . . . Any new product needs some training. But, how much training do you need to hook two connectors together and get a reading on a scope?"

Aravosis also predicted that electronics will "intimidate" some technicians. But he compared the inevitable introduction of electronics to the introduction of diesel engines.

"When we introduced diesels to the marketplace years ago," he said "the concern was, 'My mechanic is a gasoline engine mechanic. How do I get him to work on diesels?' But what is peculiar to a diesel? Injection nozzles and an injection pump. Most of the engine is the same."

Because trucks often are sold in quantity to fleets, the fleets often have their own maintenance facilities.

Ryder Truck Rental, with some 120,000 trucks in its fleet, decided it couldn't wait for the truck manufacturers and suppliers to design training programs for truck electronics.

Lynn Gorman, vice president of maintenance, said, "We were quite concerned with the cultural shock the technology would produce and the skills that would be needed to cope with the new technology."

Electronics, he noted, have arrived on 1987-model gasoline trucks and will soon arrive on big diesel vehicles. Gorman said the electronic engine management systems on diesel engines open up a whole world of possibilities for electronic controls throughout the truck.

Electronic instrument panels, driver monitoring and control functions, and tie-ins with transmission controls are just some of the likely outgrowths of engine management controls. Also, electronic chassis controls, including anti-lock brakes, are likely to be seen on trucks soon.

Gorman said, "We have been blazing a trail. Two years ago, I went to my peers, the operating officers, and said, 'I want $1.5 million over the next two years to invest in training on the new systems.' "

The officers complied and, in fact, the figure has since risen to $2 million.

Ryder wanted to train 1,900 of its mechanics, about two per branch.

Gorman said, "We wanted to train bumper-to-bumper electronic technicians."

He added, "The reason we started training early is that we had so many people to train. We are not saying those behind us won't get there. At 2,000 trucks in your fleet, you don't need the leadtime. But we realized Ryder couldn't train 1,900 technicians overnight when the technology becomes available."

As for the technicians who are selected for the training, Gorman said, "We don't select those who are resistant to change. We don't select guys who are good with a blowtorch and hammer. They have to be curious people, and they also have to pass a pre-test."

Ryder first hired two outside trainers to develop an electronic training program. The company found them inadequate. Then, Ryder took two trainers from its staff and gave them a three-month sabbatical to visit suppliers of truck electronics.

The trainers developed a three-part program. In the first part, technicians learn electronic basics in a one-week course at the company's facilities in Atlanta or Denver.

Then, the technicians participate in a 10-part correspondence course during a one-year period. Finally, when they have completed the first two phases of the program, the technicians go back to school for a one-week practical training course.

Six months into the program, the two trainers took another three-month sabbatical to gather more information. The electronic manufacturers had not developed training aids, so the trainers used the information garnered during the sabbatical to design and build their own.

Gorman said, "Because we are blazing the trail, we have accommodated some of the people who are behind us. We have allowed them to go through the course — officials from engine companies, truck suppliers and training schools — to see how we do it."

To date, about 1,250 technicians have been through phase one of the Ryder training program, and the company has "manufactured 350 electronic technical specialists," according to Gorman.

Service volume rises after a slow August

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships in September rebounded from an end-of-summer lull.

It showed an increase over the year-earlier month, and the gain was the second-highest of the year, trailing only the June advance.

Service volume for the first nine months of 1986 outpaced the volume during the corresponding 1985 period.

The Automotive News Service Index found that shop business at dealerships in September amounted to 111.4 percent of the volume recorded in September 1985.

September was the sixth straight month in which service volume topped that of the year-ago month.

The year's largest increase occurred in June, when service volume amounted to 114.3 percent of the volume recorded in June 1985.

In the first nine months of 1986, service volume was 105.7 percent of that in the same 1985 period.

In August 1986, the Service Index amounted to only 102.6 percent of the volume in August 1985. Industry sources tied the August lull to slow new-car sales during the month. Customers often have their old cars repaired before buying new ones, the sources said.

Also, many dealers and service managers said, customers traditionally hold back before the opening of a school year.

The industry experts predicted service volume would increase in September as a result of incentive-motivated sales. They also predicted that service volume would be strong through October as the new cars bought the previous month would be brought back for warranty work. At this point, it appears that the predictions were accurate.

A midwestern Chevrolet dealer said, "more used cars were traded in and there were more new cars to service as a result of the factory incentives."

A Northeast Chevrolet dealer said, "We were swamped with new-car and truck preparation work."

An Eastern Buick dealer also tied the increase in service volume to the low finance rates as well as special offers to service customers.

A Midwest Ford dealer said, "We added mechanics. There has always been plenty of work, but not enough people to do it all."

In September, total labor sales (customer paid and warranty) showed a gain of 13.4 percent.

Sales of all parts and accessories were up 13.0 percent; gross profit on all labor parts and accessories sales climbed 12.1 percent; shop parts sales (customer paid and warranty) were up 11.4 percent; and repair orders written were up 7.0 percent.

In addition, parts and accessories sales to off-premises customers were up 14.1 percent in September.

Total labor sales registered the biggest gain for the first nine months of 1986, climbing 9.4 percent over the 1985 period. Gross profit on labor, parts and accessories sales was up 7.3 percent through September; shop parts sales increased 7.0 percent; sales of all parts and accessories rose 3.9 percent; and repair orders written climbed 0.9 percent.

Parts and accessories sales to off-premises customers were up 1.2 percent through September 1986.

SERVICE INDEX
111.4★

	September, '86 vs. September, '85	9 mos., '86 vs. 9 mos., '85
Gross Profit on All Labor and P&A Sales	+12.1%	+7.3%
Repair Orders Written	+7.0%	+0.9%
Total Labor Sales (Customer & Warranty)	+13.4%	+9.4%
Shop Parts Sales (Customer & Warranty)	+11.4%	+7.0%
Sales of All P&A	+13.0%	+3.9%

★—Survey by Automotive News shows that dealers' service and parts business in September, 1986, was 111.4 percent of business in September, 1985. Service business in the first 9 months of 1986 was 105.7 percent of business in the corresponding period in 1985.

Buick's computer system supplies all the ANSWERS

SHOP TALK

ARTHUR FLAX

ANSWERS, Buick Motor Division's new computer service, is designed to sort out service information stored in the company's many computer data banks.

ANSWERS stands for Analytical Service Warranty Engineering Reporting System. It can identify service trends or work on a particular service problem from within Buick's service data bases.

Tom LaSorda, manager of customer satisfaction and engineering activities, said ANSWERS can "balance customer information with technical information."

He said a customer might complain about having to make more than one trip to a dealership to have a problem corrected. A dealer might be more concerned with the technical aspects of a repair.

Within ANSWERS is a library of standard reports used by Buick assembly plant managers, product design teams and top management.

The system can also provide ad hoc reports on service problems by searching through the Buick data bases.

LaSorda said, "A data technician might be asked for example, 'Can you tell me the power window failure rate on a certain model?' The technician can search through the data bases in 30 minutes to one hour."

Information contained in the data bases comes from the Buick technical assistance center (TAC), customer assistance center (CAC), service engineering analysis, internal quality index, company garage information, marketing information, J.D. Power & Associates and the Customer Satisfaction Index.

TAC is a toll-free hotline for technicians' questions, and CAC is a similar hotline for customers' questions.

Buick may be getting a reputation for innovation. It is also the first General Motors division to offer the IBM PC-based Computerized Automotive Maintenance System, a diagnostic tool that can instruct a technician and also can transmit dealership repair data to Buick headquarters in Flint.

There are plans for CAMS to become integrated into the ANSWERS system, according to LaSorda.

ANSWERS is a joint project between Buick and Electronic Data Systems.

1986 TOTALS (end of model year)	119	144	13	45		(321)

*Two-door models include hatchbacks, which some makers list as three-door models.
**Totals for Renault, Honda, Nissan, Toyota and Volkswagen include only U.S.-built models.

MODELS

FROM PAGE 3

cury Marquis now are officially out of the field. Ford Motor halted production of those models when Taurus and Sable arrived, but LTD and Marquis stayed in the 10-day sales reports throughout the 1986 model year.

Pontiac's Parisienne has departed, and its Bonneville ain't what it used to be. The 1986 Bonneville was a rear-wheel-drive intermediate; the 1987 Bonneville is a rear-wheel-drive standard-sized car. It is Pontiac's version of the Buick LeSabre and Oldsmobile Delta 88.

Chrysler Motors trimmed its two-door ranks heavily, knocking out all five of its convertibles and nine of its 18 coupes. The return of Daytona and the arrival of the LeBaron J will boost the two-door choices, but Chrysler — unlike Ford and GM — is pretty much a purveyor of four-door sedans for 1987.

GM also cut into its two-door ranks, eliminating 16 coupes. Ford bounced four.

The 1987 chart shows 116 domestic four-door sedans compared to 119 last year. But the coupe total has dropped to 120 from 144.

The 1987 story isn't entirely a tale of chopping models. The eight major companies that make cars in the United States added 38 models for 1987 and dropped 70 for a net decline of 32.

Strangely, the biggest reduction in the model total occurred in the best-selling category of domestic cars — the intermediates. There are 78 mid-sized choices for 1987, down from 98 in 1986. There were lesser cuts in the compact and subcompact and luxury segments and a minor rise in the standard-sized group.

Ford Division, with 40, has the most models for 1987. Next in line are Pontiac, 37; Chevrolet, 35; Buick, 31; Oldsmobile, 31; and Mercury, 21.

Pontiac was the 1986 leader with 43 choices, followed by Ford, 42; Buick, 39; Chevrolet, 34; Oldsmobile, 33; Mercury, 30; and Dodge, 25.

The Automotive News analysis includes all models the makers are pricing or merchandising individually. It does not include engine or transmission options.

Kruse family regains control of auction firm

AUBURN, Ind. — The Kruse family has regained control of Kruse International, the classic-car auction house, from ITT Corp., which had owned it for seven years. Terms of the sale were not disclosed.

Kruse Inc. is owned by Mitchell D. Kruse. The company named Dean V. Kruse national sales manager and chief auctioneer. Dean is Mitchell's father.

A Kruse spokesman said the sale, which was in the works for two months, followed some tense moments between Dean Kruse and executives of ITT Auction Service.

"Mr. Kruse didn't want the company to be owned by someone else," the spokesman said.

The Kruse family entered the auto auction business in 1938.

GM will call shots on 1987 incentives

By Michelle Krebs, Laura Clark and Dave Zoia
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Dealers across the country remain in the dark about whether the manufacturers plan to launch a new round of financing incentives.

The dealers, as well as consumers and other automakers, are waiting to see what General Motors does. And they are getting mixed signals.

Some dealers believe GM will stick to its vow of staying away from incentives on 1987 models. GM Chairman Roger B. Smith and President F. James McDonald have said GM will cut production rather than offer incentives.

Some dealers contacted by Automotive News said they believe GM will keep its promise. They point to GM's recent production cutbacks and new lease programs as indications that GM will not offer low-interest-rate financing incentives.

GM recently announced it will cut the hourly production rate on its slow-selling Buick LeSabre models. The cutback means the indefinite layoff of 1,300 workers at the Buick City complex in Flint, Mich., which produces the cars. Since September, GM has scaled back its overall fourth-quarter production schedule by 8 percent.

GM also has launched a new lease program, with attractive monthly rates. It runs through Dec. 31. GM is backing the program with a substantial advertising outlay.

"They've stuck longer without incentives than I thought they would," said Jim Caplinger, who has Chevrolet, Oldsmobile and Chrysler franchises in England, Ark. "They told us they were going cold turkey, and I believe that's what they're going to do. I didn't believe them before."

Other dealers said slow sales and high inventories will force GM to offer incentives.

GM's sales for the first 10 days of November were off 5 percent from the 1986 period. GM had a 68-day supply of new cars as of Nov. 1, compared with a 73-day supply Nov. 1, 1985, and a 36-day supply Oct. 1 of this year, which was near the end of GM's 2.9 percent financing program.

A number of dealers handling a variety of makes said they hoped incentives would return. Customers have become accustomed to incentives and aren't buying without them, they said.

Meanwhile, rumors of impending incentive programs are rampant. The rumors leave consumers wondering if they should buy now or wait for the next round of incentives. Dealers wonder what to tell their customers.

If a customer buys now and an incentive program is announced next week, a loyal patron could be lost for good, thinking the dealer had deceived him.

"Consumers think we know in advance, but we find out from the newspapers," said W.L. "Mac" McCulloh, a Cadillac, Oldsmobile and Honda dealer in Ardmore, Okla.

"All you can do is tell the customer what you know," said George Glassman, of Glassman Oldsmobile, Southfield, Mich. "There's no program now. GM hasn't announced one, and we don't know if one will be announced."

Nevertheless, Glassman said he wishes GM would say if incentives are on or off, to clear up the confusion.

McCulloh, a member of the Cadillac dealer council, said he plans to recommend to that group that GM outline a plan for incentives at the beginning of the year and stick to it so the market doesn't bounce like a yo-yo.

"It's killing us," he said. "We lose more than we gain because of the drop-off after incentives go off."

Dealers say that not knowing the prospects for incentives makes it difficult for them to forecast, regulate their inventories and make expansion plans.

Import incentives begin to rear their heads

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

The first cracks are appearing in Japanese importers' resistance to joining domestic automakers in offering rebates or low-interest loans on passenger cars.

Toyota dealers in four states started offering $600 cash rebates on 1986 Toyota cars, vans and trucks last week. The offer is backed by Gulf States Toyota, distributor for Toyota Motor Sales U.S.A. in Texas, Oklahoma, Mississippi, Arkansas and Louisiana. The rebate is not available in Louisiana because of state law.

While not a national program, it is the first time rebates have been offered on Toyota cars.

American Isuzu Motors is offering rebates or low-interest loans on 1986 cars through Nov. 30. With a 79-day supply of 1986 models nationally, Isuzu will pay a $500 rebate on I-Marks and $750 on Impulses. Instead of the rebate, purchasers may choose a 30-month loan at 5.9 percent or a 48-month loan at 7.9 percent.

Through Nov. 30, Mitsubishi Motor Sales of America is conducting a $200-per-car dealer-incentive program (plus another $200 if sales objectives are met). Many dealers are converting the program into subsidized-rate consumer loans through Mitsubishi Acceptance Corp.

Sales incentives of all types have been common on Japanese-brand trucks for years, but truck imports are not restricted as Japanese car imports are, and domestic automakers are competing aggressively in the compact truck segment.

Most Japanese importers say they have no plans for consumer incentives on cars. But in view of currency exchange rates that have eliminated much of the Japanese price advantage, importers acknowledge it would be difficult to ignore any such move by a major importer.

†—Estimate

Sales rise 5% for Nov. 1-10

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Domestic new-car sales for the first 10 days of November totaled 155,065, up 5.51 percent over the year ago period's 146,970.

But this year's post-incentive total was a far cry from the record 289,056 cars sold during the period in 1971.

Honda posted the biggest percentage gain during this year's period, with an upturn of 110.02 percent. Ford Motor Co. was next, with a 32.78 percent increase, followed by Nissan, up 27.46 percent, and Chrysler Motors, up 1.37 percent.

American Motors' sales fell 51.30 percent from the year-ago period; Volkswagen's declined 25.80 percent; and General Motors' dropped 5.15 percent.

SUPPLY

FROM PAGE 1

vehicles, which was 11.67 percent higher than the 548,455 on Oct. 1 and 64.21 percent above the year-earlier total of 373,603.

Days' supply for cars and trucks combined was 48 on Nov. 1, compared with 39 on Oct. 1, and 30 on Nov. 1, 1985.

On Nov. 1, import-car inventories were divided this way: Japan, 71.40 percent; West Germany, 18.17 percent; and other countries, 10.43 percent.

A month ago, the shares were: Japan, 73.26 percent; Germany, 19.47; and other countries, 7.27.

All inventory figures in this article include dealer and port inventories and vehicles in transit.

By country of origin, the days-supply figures for imported cars were:

Japan — Honda, 13; Toyota, 22; Acura, 31; Subaru, 40; Mazda, 48; Nissan, 54; Isuzu, 79; Chevrolet, 95 (including 85 for the Isuzu-built Spectrum and 122 for the Suzuki-built Sprint); Mitsubishi, 104; and Chrysler Motors, 112.

West Germany — Mercedes-Benz, 16; Porsche, 37; BMW, 51; Audi, 77; Volkswagen, 89; and Merkur, 108.

Other countries — Jaguar, 18; Hyundai, 22; Volvo, 35; Saab, 35; Yugo, 41; Alfa Romeo, 42; Renault, 57; and Peugeot, 61.

There were some major increases among the captive imports. Spectrum's 85-day supply was up from 36 a month earlier, and Sprint rose to 122 from 58. The supply of Chrysler imports doubled to 112 days from 56; Merkur almost doubled going to 108 from 58.

Among the independent imports, VW's supply climbed to 89 days from 57, and Mitsubishi's rose to 104 from 76.

Days' supplies of light trucks were: Suzuki, 19; Mazda, 42; Toyota, 46; Chrysler, 81; Mitsubishi, 118; Isuzu, 119; and Nissan 130.

All import-truck figures include Nissan's domestic-built models.

Porsche 1st with 2nd price hike

Stickers to rise 5% Jan. 1, after prior 8.6%

DETROIT — Porsche Cars North America has become the first auto firm to raise prices twice on 1987 models sold in the United States.

Also last week, Nissan Motor Corp. in U.S.A. completed its 1987 pricing by placing stickers on the 300-ZX sports car, the new van and the redesigned Pulsar coupe.

Porsche said last week that prices will rise an average of 5 percent on Jan 1. Optional equipment will be included in the hike. Porsche did not place a dollar figure on the boost, but Automotive News estimated it at $1,760.

In addition, the 924-S coupe went up $2,000 on Nov. 15 and is now $21,900. The car was introduced in the United States in June, and Porsche mentioned the Nov. 15 increase when it announced its 1987 prices in August.

Automotive News estimated that the Jan. 1 increases will range from $1,095 on the 924-S to $2,945 on the 928S-4.

On the basis of a 5 percent increase, Porsche prices will range from about $23,000 for the 924-S to about $62,000 for the 928S-4.

PCNA President John A. Cook said that since the August boost, "the value of the U.S. dollar has deteriorated and has necessitated this increase."

He added, "I want to announce our intentions now so our dealers and their customers can make their purchase plans for early next year."

In August, Porsche Cars North America posted a sales-weighted hike averaging 8.6 percent on its 1987 models. Increases ranged from $1,000 to $7,000, and Automotive News estimated that the increase averaged $3,280.

Nissan has priced its Pulsar at $10,599 for the XE and $11,799 for the twin-cam, 16-valve SE version. The 1986 Pulsar, which was not directly comparable to the new one, was $9,499. Nissan's 7-passenger van caries a tag of $11,999 for the XE and $13,999 for the GXE.

Prices of the 300-ZX sports car with five-speed transmission start at $18,499 for the base model. The coupe with T-bar roof is $19,499; the 2-plus-2 coupe is $20,649; and the topo-of-the-line turbo coupe is $21,-399. Models with five-speed transmission are up $400. Automatic transmision is $650 extra for 1987, compared with $550 for 1986.

OBITUARIES

Ivan L. Wiles, 88; retired GM executive

SCOTTSDALE, Ariz. — Ivan L. Wiles, retired General Motors executive, died Nov. 10. He was 88. Mr. Wiles retired in 1957 as executive vice president in charge of dealer relations. He also was a member of the GM board of directors.

He joined the then Oakland Division in 1928 and moved to Buick Motor Division in 1932, becoming comptroller in 1941. Mr. Wiles was named Buick general manager and elected a GM vice president in 1948. While he was at the helm, Buick produced 781,296 cars in 1955, which was then a record for the division. Mr. Wiles was named GM executive vice president for dealer relations in 1956.

Ralph W. Graham

SANTA MONICA, Calif. — Ralph W. Graham, a 35-year Ford dealer, died Oct. 30. He was 66. Mr. Graham founded Graham Ford, Downey, Calif., in 1951 and later changed its name to Downey Auto Center. In 1970, he founded Friendly Ford, Las Vegas, Nev. At the time of his death he was chairman of both dealerships. He was a member of the Ford National Dealer Council in 1963-64.

Sherman Sicklick

HARTFORD, Conn. — Sherman Sicklick, 64, long-time Connecticut automotive sales executive, died Oct. 29. Mr. Sicklick was general manager of the former Dworin Chevrolet, East Hartford, for 26 years, and more recently, was affiliated with Skip Gengras Chevrolet, Southington.

PRODUCTION

Auto production off a bit, but stays above 178,000

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

United States automakers targeted production of 178,452 cars last week, slightly below the previous week's 179,398.

The prior week's output was the highest since the week ended June 21 when 180,166 cars were built.

Last week's scheduled production was 2.64 percent more than the year-ago week's 173,863.

Companies split last week's estimated output as follows: General Motors, 53.38 percent; Ford Motor Co., 20.77 percent; Chrysler Motors, 15.80 percent; Honda of America Manufacturing Inc., 4.10 percent; New United Motor Manufacturing Inc., 2.35 percent; Nissan Motor Manufacturing Inc., 1.64 percent; Volkswagen of America, 1.12 percent; and American Motors, 0.84 percent.

AMC's Kenosha, Wis., plant resumed output last week (Nov. 10). The plant had been down for two weeks to adjust inventory.

GM's Flint, Mich., (Buick City) plant laid off 3,000 workers today (Nov. 17). Of that total, 1,000 will return to work Nov. 20, and the other 2,000 will return Nov. 24. On Nov. 24, 1,300 workers at Buick City will be laid off indefinitely as the line rate is cut.

GM's body assembly plant in Flint and its Pontiac G assembly plant in Pontiac, Mich., will be down from today until Dec. 1 for inventory adjustment. A total of 4,700 workers have been laid off.

The GM Fiero plant in Pontiac also closed today to adjust inventory, affecting 1,600 workers. The plant is scheduled to resume output Dec. 1.

Chrysler's St. Louis (No. 2) plant closed today for model changeover and will be down until March 27, affecting 3,000 workers. The plant, which has been building standard-sized cars, will be converted to produce a stretched version of the Dodge Caravan/Plymouth Voyager minivan.

Daily overtime is slated this week at all Ford plants except the Edison, N.J., facility.

Saturday (Nov. 22) overtime is scheduled at Ford's Wixom, Mich.; Wayne, Mich.; and Edison plants.

Chrysler slated overtime Saturday (Nov. 15) at its Belvidere, Ill., and Sterling Heights, Mich., plants. Those plants, along with Newark, Del., and Detroit, are scheduled for daily overtime this week.

Week's truck output drops 1.7%

Domestic truck production last week totaled 72,410, 1.70 percent below the previous week's 73,664 and 7.49 percent below the year-ago week's 78,274.

General Motors slated Saturday (Nov. 15) overtime at its Baltimore plant.

Ford Motor Co.'s Lorain, Ohio, and Louisville, Ky., plants also were scheduled to work Saturday.

All Ford truck plants except the Wayne, Mich., plant are slated for daily overtime this week (Nov. 17).

Chrysler Motors' Warren, Mich., plant was scheduled for overtime last Saturday.

Canadian cars dip after big week

Last week, Canadian automakers scheduled production of 25,655 units, 6.91 percent below the previous week's 27,559.

The prior week's output was the highest since the week ended May 14, 1983, when 27,994 cars were assembled.

Estimated car output last week was 3.39 percent more than the year-ago week's 24,813.

So far this year, 928,458 cars have been assembled, 3.46 percent less than the 961,704 completed last year at this point.

Truck production was targeted at 11,143 units last week, 9.05 percent more than the previous week's 10,218, but 42.87 percent below the year-ago week's 19,506.

Ford retools 2 plants in Michigan

Ford Motor Co. will invest $171 million to tool two Michigan plants to make a new line of alternators and starters for 1989-model vehicles.

Ford will put $77 million into its Ypsilanti, Mich., plant for additional starter production and another $94 million into its Rawsonville, Mich., facility for output of the alternators.

"We believe these new products will compete favorably in quality and cost with anything presently imported from Japan," said Edson P. Williams, vice president, Ford Diversified Products Operations. Ford said it had considered outsourcing the components, but "projected progress in cost containment, supported by very active employee involvement" won the jobs for the two facilities.

The company said both plants will be outfitted with computer-controlled machinery, robotics, automated material handling equipment and will have quality assurance processes.

Ford said improvements in the design of its alternator will lead to reductions in noise and vibration. In addition, links to vehicle engine control modules will enable the alternator to be shut down during full acceleration or when the engine is being started.

The new starter will be smaller and more reliable and efficient than current units, Ford said.

The starters and alternators will go into production alongside existing designs for the 1989 model year. By the early 1990s, they will replace current units in all Ford cars and trucks.

Ford's Rawsonville plant employs 2,500 hourly and 450 salaried workers. It produces alternators, carburetors, fuel injectors, electric fuel pumps and small motors.

The Ypsilanti facility employs 1,800 hourly and 300 salaried workers in manufacturing starters, distributors and other mechanical products.

Each plant will receive $3 million in state grants for training.

Despite the announcement, the UAW continued to criticize Ford for its outsourcing plans.

"We welcome Ford's recent announcement (about Ypsilanti and Rawsonville)," said Stephen Yokich, UAW vice president and head of the union's Ford department. "Unfortunately, though, that's not the whole story.

"The sad fact is that jobs saved . . . will not come close to replacing those lost by Ford's decision to transfer (other) work to plants in France, Brazil, Mexico and elsewhere."

Nissan plant receives environmental award

SMYRNA, Tenn. — Nissan Motor Manufacturing Corp. U.S.A. has received an award for environmental excellence at its plant from the Tennessee Manufacturers and Taxpayers Association. Ten other companies — none of them automakers — also were recognized.

Ernest Blankenship, the association's vice president, said Nissan has spent more than $10 million on air pollution control, solid and hazardous waste management and waste water treatment at the plant.

GM SOUTH AFRICAN:

By selling in 1986, GM gains millions in U.S. tax deductions

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Copyright, 1986, Automotive News

General Motors stands to gain millions in U.S. income tax deductions from its much-ballyhooed withdrawal from South Africa.

Tax experts at two major national accounting firms say by GM selling its South African subsidiary now — rather than after tax laws change next year — the U.S. government will effectively reimburse 46 cents of every dollar GM has lost in South Africa over the years.

Although GM will not reveal its accumulated losses in South Africa, they are believed to be in the tens of millions. And by selling in 1986, GM can write off those accumulated losses at the high 46 percent current corporate tax rate, instead of at the reduced rates dictated by the tax reform act. GM can also deduct on its U.S. tax returns the millions it will pay to erase the debt of General Motors South African, declaring it a bad debt in the United States.

GM also may stand to gain tax writeoffs from its 1986 divestiture of portions of its Bedford truck subsidiary in England and a reorganization of its Australian operations, although those effects were unclear.

Present tax law does not allow corporations to write off losses from an overseas subsidiary on their U.S. taxes. But corporations can accumulate those losses over the years and write them off when disposing of an overseas subsidiary.

And the tax benefit from that deduction under 1986 U.S. tax rules is worth more because the corporate tax rate is higher than it will be after Jan. 1, 1987, when the corporate rate drops from 46 percent to 40 percent. It falls to 34 percent by July 1, 1987.

If GM foresaw any likelihood of divesting its controversial and money-losing South African investment in the next several years, the most beneficial time to sell to local investors in South Africa was in 1986.

The exact amount of tax benefit GM could gain from its South Africa sale is not known. Despite numerous requests from Automotive News during the last month, GM officials have declined to specify the amount of GM's accumulated losses in South Africa and the tax implications of the South African or any other divestitures. GM officials will say only that the South African subsidiary has lost money for several years.

A GM spokesman said: "Our decision to divest was not affected by a change in the tax code. In decisions of this magnitude, the

AUTOMOTIVE NEWS JOE WILSSENS

A strike at GM's Delco Electronics plant in Kokomo, Ind., forced 10 assembly plants, including GM's Clark Avenue plant in Detroit, to close last week.

Delco dispute: Tip of GM iceberg

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

A settlement was reached after a four-day strike at General Motors' Delco Electronics plant, in a preview battle over outsourcing expected to continue in next year's national contract talks with the UAW.

Members of Local 292 in Kokomo, Ind., were expected to ratify the agreement Saturday (Nov. 22), according to Ron Cassis, the local's president.

The Delco Electronics strike was the second since September over subcontracting at General Motors. The other was at the GM Tech Center in Warren, Mich. The Delco strike also involved outsourcing.

It appeared that — in the tentative Delco agreement — the UAW had won the first round in the dispute over outsourcing.

Subcontracting and outsourcing are expected to be main topics during the industry's 1987 national contract talks.

About 7,700 UAW workers at the company's Delco Electronics plant in Kokomo walked out last Monday (Nov. 17). By week's end, the strike had choked off 10 assembly plants dependent on the thinned inventories of the just-in-time delivery system.

At presstime, about 38,000 GM assembly workers had been laid off, and GM had lost an estimated 3,600 units of production — about 4 percent of its planned output for

Chrysler offers new incentives; a wave begins

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co., Chrysler Motors and American Motors kicked off a new round of dealer and consumer incentives last week, geared partially to trimming inventories.

Chrysler's program is heavily slanted toward trucks where inventories have been on the rise for the Big Three generally.

The Ford and AMC programs were partially in response to Chrysler's, though AMC is trying to solve a special problem of its own.

GM officials have been telling dealers they're holding fast with their no-incentive philosophy.

Chevrolet and Oldsmobile, in fact, sent dealers electronic communiques last week, saying in effect that sales have been slow and that dealers holding back, waiting for incentives, were part of the problem.

In response, one of GM's largest dealers said, "It's hard for them (factory officials) to believe the market is as bad as it is."

He added that while he believed what GM was saying at the moment, "there's no telling when they may change their minds or what they'll do."

AMC is paying dealers a straight $500 on every 1986 Alliance, Encore and Comanche pickup they sell from Nov. 20 to Jan. 6.

It is also paying $300 on every 1987 Alliance, including the new performance GTA model and the former Encore being sold for 1987 under the Alliance name.

The program excludes fleet and government sales.

William Price, AMC general manager of North American sales, said the company wants to clear out its backlog of carryover models so it can get on with selling its new models. He estimated AMC's 1986 stock of Alliance/Encore at about 8,000 units and its stock of carryover Comanches at 5,000 to 8,000

What next?

Renault outsider expected to succeed slain Besse

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

PARIS — Whoever is selected to take over Renault after the assassination of Chairman Georges Besse is likely to find the state-owned automaker in better financial shape than was generally known.

The French government is expected to install a new chairman by mid-week, likely choosing an outsider.

The person will inherit a company that will earn a net profit in the fourth quarter — a startling revelation for a concern which lost nearly $2 billion in 1984 and was not expected to pull out of the red for at least another year.

GAMMA-LIAISON

Besse takes the wheel at Paris Auto Show

Several Renault sources last week confirmed a fourth quarter net gain and predicted that the state-owned automaker will be in the black for all of 1987.

The murder of Besse left the automaker without a leader at a crucial point in its financial restructuring.

American Isuzu shopping world for low-priced car to import

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

KAPALUA, MAUI, Hawaii — John E. Reilly, senior vice president and general manager of American Isuzu Motor Co., wants to escape a shakeout of Japanese automakers which he sees coming by the late 1980s.

Reilly is scouring automakers in developing countries of the Asia-Pacific region and Eastern Europe, trying to locate a low-cost supplier of built-up cars that he can market as Isuzu-brand models in the United States.

He has visited automakers in Taiwan, Malaysia, Korea and Eastern Europe. Earlier this month, he went to Skoda in Prague, Czechoslovakia. He even tried Adam Opel AG, the West German subsidiary of General Motors. GM owns 38.6 percent of American Isuzu's parent company in Japan.

Reilly is looking for supplementary supplies of entry-level Isuzus before an Isuzu-Fuji joint-venture assembly plant comes on stream in late 1989 in the United States. For the record, Isuzu says it expects

NLRB denies challenge to Saturn pact

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The National Right to Work Legal Defense Fund lost another round in its challenge to the hiring practices at General Motors' Saturn Corp.

Rosemary Collyer, National Labor Relations Board general counsel, denied the group's appeal of a July ruling by the NLRB's regional director that dismissed the right-to-work group's charges of unfair labor practices against GM and the UAW.

The group challenged preferential hiring at the Saturn plant in Spring Hill, Tenn., for employees at GM facilities represented by the UAW.

Collyer also dismissed charges that GM prematurely recognized the union as the collective bargaining representative at Saturn.

A spokesman for the group said it will decide on its response by the first week of December.

Toyota plant stirs union fire

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Members of several building trades unions staged a protest at the Japanese embassy last week against the use of non-union labor in the construction of Toyota's Kentucky assembly plant.

About 400 workers demonstrated, part of a six-month-old campaign.

Toyota Motor Corp. has hired Ohbayashi Construction Co. as project manager, and the Building and Construction Trades Department of the AFL-CIO charges that Ohbayashi has refused to negotiate a labor agreement.

"We will not sit idly by and allow foreign developers, or any developer, to subvert American labor standards," Robert A. Georgine, president of the Building and Construction Trades Department, said last week.

The union has also challenged the legality of Kentucky's incentive package to get the $800 million plant.

The union claims that the package consists of $300 million in incentives, plus $60 million in tax breaks. The state, however, has estimated the total cost of the package at $125 million.

LeFauve at Saturn site in Spring Hill, Tenn. AUTOMOTIVE NEWS JOE WILSSENS

SATURN: *Dealers will be located to battle imports head on*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

The first Saturn dealers will be located in areas where import sales are strong.

Richard LeFauve, Saturn Corp. president, told a news conference in Spring Hill, Tenn., last week that dealers — though he won't say how many — will be phased in while the plant itself is being phased in.

The first phase of the plant will represent $1.7 billion of the total $3.5 billion Saturn investment. The workforce initially will be 3,500 instead of 6,000 as previously planned.

The first phase is scheduled to produce 200,000 to 250,000 cars annually, beginning in the summer of 1990. The second phase, which has no timetable yet, is expected to bring total production of the Saturn plant to 500,000 units annually.

LeFauve said the first Saturn car will be produced in the summer of 1990 and General Motors Chairman Roger B. Smith will drive it off the assembly line, as Smith has promised from the start of the Saturn program.

However, the bulk of cars in the first phase will be produced in 1991 because of a slow, controlled start-up.

"That's also the way you bring your dealers on so that you don't have dealers with facilities in place and no cars," LeFauve said.

While selection of dealer locations will be aimed at fighting imports, one of the exceptions will be Maury County, Tenn., where the Saturn plant is located. There definitely will be a Saturn dealer there, LeFauve said.

LeFauve said the initial annual production will be enough to support a dealer network. A second wave of dealers will be added when production reaches the 500,000 mark.

LeFauve said a group of GM dealers has been asked to assist in the design of Saturn's franchise system. The dealers are helping to decide how Saturn dealers will be chosen and whether the Saturn franchise will require a separate dealer showroom.

Audi acceleration woes continue

By Edward Lapham and Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTERS

The anticipated report on alleged unintended acceleration problems of the Audi 5000 was scheduled to air yesterday on the CBS-TV program "60 Minutes."

The report has been in preparation for several months.

Audi has said it can find no mechanical problems with the cars but has issued a recall to install shift-lock devices for them.

CBS officials last week notified Audi that the segment was scheduled to air and, in keeping with network policy, asked Audi if it wanted to pull a 30-second spot scheduled for that telecast.

An executive of Audi's advertising agency said Audi removed its ad from the show but not from the network. "We're negotiating to run the spot in the second Thanksgiving Day football game," he said.

Also last week, the Center for Auto Safety asked Transportation Secretary Elizabeth H. Dole to declare Audi's shift-lock repair a failure and to order the company to repurchase 227,000 Audi 5000s with automatic transmissions.

The shift lock prevents the driver from getting out of "park" without depressing the brake pedal. On July 28, Audi announced a recall of all 1978-86 Audi 5000s to install that lock and said it would be installed on all new Audi 5000s.

The consumer group cited three instances of unexpected acceleration during the last three weeks in Audi 5000s with the devices.

On March 19, the Center for Auto Safety and the New York attorney general petitioned NHTSA to recall Audi 5000s. The center claims the toll has now reached 750 accidents, 250 injuries and 6 deaths — one accident for every 300 Audi 5000 cars.

Ironically, the wife of a DDB Needham Worldwide finance department employee was involved in a unintended-acceleration accident last week in Greenwich, Conn. She suffered a broken leg.

The car was equipped with an automatic transmission but did not have the interlock device.

Makers may get second NHTSA crash

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA plans to give automakers a second chance to prove how crashworthy their products are.

NHTSA has proposed that any vehicle it has already tested for occupant protection can be re-crashed under the agency's New Car Assessment Program, if the manufacturer has made production changes to improve safety.

Those crashes by NHTSA would be done at manufacturer expense.

Interested parties have 45 days to file comments on the proposal.

NCAP crashes are done at 35 mph into a brick wall and produce forces about one-third more severe than those done at 30 mph to test compliance with NHTSA safety standards.

Recent 35-mph tests by NHTSA have resulted in several production changes by manufacturers: Honda shortened its seat belts and is believed to have made changes in its steering-column system. Volvo also made changes to its belt system. Ford changed the belt retractor on the Tempo and did away with the plastic clip on the B pillar.

The new NHTSA proposal refers only to production changes made after NHTSA crash results have been announced.

In the Federal Register notice, NHTSA noted that when manufacturers have made "small but significant" production changes to improve performance in the NCAP crashes, re-crashing has shown improvement.

NHTSA, however, has a limited amount of money for re-crashing and consumers do not always learn of better results.

Under the proposal, results from the NCAP crashes would be published by NHTSA in government press releases, but labeled as optional test program data. The Reagan administration has continued this consumer information program although it is considered experimental.

NHTSA is proposing that manufacturer data be released simultaneously with government data, but identified separately to show production changes which have been made.

The companies would have to provide technical data to NHTSA (confidentially, if requested and justified) and allow a government representative to be present at the retest. To avoid any question of pre-selecting a vehicle, the government would buy the vehicle at random from a dealer — just as it always has done.

NHTSA would not publish the data unless production changes had been made, but once assured of the validity of the retest, it would publish the automaker's results whether they are better or worse than the government's.

Benefits, according to NHTSA, are "timely and up-to-date crashworthiness data provided to consumers, fairness to manufacturers which have made vehicle safety improvements by replacing outdated data and minimum expense to the taxpayers."

NHTSA conducts crashes to enable consumers to make a rough comparison, by weight class, among various makes and models.

Chrysler challenges EPA order to recall 93,000 cars

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Chrysler is protesting EPA's recall order on 1981 Omni and Horizon models equipped with 1.7-liter engines and manual transmissions. About 93,000 cars are affected.

Chrysler has requested a public hearing through a letter from its Washington law firm, Hogan and Hartson, to the EPA. The letter indicates that Chrysler is willing to go to court, if necessary.

Although the Omni and Horizon models are approaching the end of their 5/50 emissions warranty, EPA could still force a recall if it sticks to its guns and prevails in what could be a court battle.

The EPA's testing of the Chrysler cars was part of the Clean Air Act, in which the agency randomly tests to see if cars are meeting 50,000-mile/five-year emissions standards.

In September 1986, EPA said the cars had an emissions level of 1.4 grams per mile, exceeding the nitrogen oxide standard of 1.0 gpm.

In fact, EPA said, retesting showed not only a 75 percent failure rate for NOx, but a 50 percent failure rate for hydrocarbons as well.

EPA suggested that Chrysler deal with its HC emissions problem (mean emissions were 0.42 gpm compared with the standard of 0.41 gpm) as long as the company was working on a remedy for NOx.

In September, Chrysler protested that the humidity at the test site may have affected NOx emissions adversely. In its proposed recall order to Chrysler, EPA noted that the federal test procedure has no humidity specification, but had a correction factor been used, its "finding would remain the same as the NOx mean and it would be 1.3 gpm with an 88 percent failure rate."

Chrysler said EPA failed to account for ambient humidity at the Virginia Testing Laboratory where it did confirmatory tests. Had EPA done so, Chrysler said, 90 percent of those tests would have been voided, leaving no basis for the recall.

Besides, said Chrysler, EPA failed to check the Virginia retests against tests made in San Antonio, Texas; Vancouver, Wash.; and East Liberty, Ohio, where the mean test results were "well below" the NOx standard. Chrysler also said some of the "worst-case" cars tested at those three sites had better results than vehicles tested in the so-called properly maintained cars tested in the Virginia lab.

Correction

TRUCK INDUSTRY

10-month sales set record despite October dip

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck dealers retailed a record 4,090,068 vehicles through the first 10 months of calendar 1986, up 3.9 percent from the comparable 1985 period.

They retailed 364,125 trucks in October, off 4.1 percent from last year, according to figures compiled by Automotive News and the Motor Vehicle Manufacturers Association.

The accompanying chart, which details sales by segment and manufacturer, will be published by Automotive News every month.

Sales results for medium and heavy truck manufacturers indicate a rebound in those segments during October.

Freightliner, Mack, Navistar, Volvo and Peterbilt were among companies showing an upturn in October sales, after being down on a year-to-date basis for most of the year.

Ford, GMC, Kenworth, Mercedes-Benz and Chevrolet medium and heavy sales, however, continued to lag behind a year ago in October.

Freightliner's Class 8 sales of 1,742 were up 21.4 percent in October. With another strong month in November, the company could pull ahead of a year ago.

Mack was also up a strong 12.2 percent in the month on sales of 2,035 medium and heavy trucks. Mack, down 25.3 percent for the first 10 months of the year, has virtually no chance to match its 1985 performance for the full year.

Navistar's sales of 8,329 were up 3.6 percent in the month, giving it a slight 0.5 percent lead over last year in 10-month sales.

Peterbilt was up 6.8 percent in October, and trails last year by 16.6 percent for the 10-month period.

Volvo White sales of 1,261 were up 11.8 percent in October and, with a strong finish in November and December, the company could top its full-year 1985 performance.

Generally, new-to-market importers Hino and Nissan Diesel are gaining slowly but steadily in the middle Class 5, 6 and 7 segments.

Both are making their strongest marks in Class 7 where they've tallied a total of 803 sales between them thus far this year.

New 6-cylinder diesel line will replace Navistar V-8; Metro II package van due

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Navistar International Corp. introduced an engine line and a package van at the American Trucking Association's convention.

The DT-360 diesel engine will replace the company's naturally aspirated 9-liter (360-cid) diesel V-8 by 1988. The 9-liter received a major update in 1979, but the basic engine family dates back to the 1960s.

The DT-360 is an inline six-cylinder turbocharged diesel engine based on the larger DT-466 engine, which was introduced in 1975.

The new engine was designed for the medium-duty market up to 50,000 pounds GVW. The 466-cid DT-466 is designed for applications to 70,000 pounds GVW.

The DT-360 will be available in 165- to 180-horsepower versions. The intercooled versions carry a DTA designation and are rated at 180 hp for 49-state models, 175 hp in California. Versions of the DT-466 range from 165 to 240 hp.

"The 9-liter engine could not qualify for the 1988 emissions standards," said George D. Aravosis, vice president for marketing, sales and planning in Navistar's Engine and Foundry Division.

"In order to meet the hydrocarbon and nitrous oxides requirements, we would have to turbocharge. Once you turbocharge the 9-liter and strengthen the bottom end, you wind up with a more costly engine than the market will bear."

He added, "We had the capability to build a six-cylinder, turbocharged, intercooled 360-type engine more cost effectively."

The DT-360 will be offered at a price equal to that of the current 9-liter. The engine will be standard on International model 1754 S-series medium trucks and model 1853 school buses, now powered by the 9-liter.

Limited DT-360 production will begin in January with full-scale production starting in March.

The new engine features a open-chamber design with direct fuel injection.

Navistar said the DT-360 shares 60 percent of its service parts and all of its accessories with the DT-466.

The new engine is five inches shorter and some 200 pounds lighter than the DT-466.

The new DT-360 will carry a two-year, unlimited mileage warranty that includes 100 percent parts and labor coverage.

The warranty is identical to the coverage on the 9.0-liter diesel.

The DT-360 will be built on a production line next to the DT-466 at Navistar's Melrose Park, Ill., engine plant.

The International Metro II package van, to be available in January 1987, was designed for the growing overnight package delivery market. The new van is available in six body lengths from 14 to 24 feet. Two models, the Metro II 1400 at 14,480 pounds GVW, and the Metro II 1600 at 20,500 pounds GVW, will be offered. Optional GVW ratings range to 27,500 pounds.

International estimates 800 to 1,000 sales the first year, with sales increasing in following years.

"The recent increase in overnight package deliveries, along with the traditional multi-stop product delivery services, have increased the need for a larger, truck-quality, multi-stop vehicle," said Robert M. Shaughnessy, senior vice president for marketing and sales. "The International Metro II walk-in vans have been designed to meet this demand."

Both Metro II models will be powered by the International 6.9-liter V-8 diesel engine, rated at 130 hp in the 1400 and 155 hp in the 1600.

The Metro II is built on an International S-series truck chassis and features body sidewalls of fiberglass reinforced plywood. Four-wheel disc brakes are standard.

Vans of this type commonly use aluminum sidewalls which, Navistar said, are susceptible to scratches and gouging.

Shaughnessy admitted aluminum walls are lighter, but he said vans of that type usually carry goods that fill the unit before reaching the maximum weight capacity of the truck. He also said aluminum-bodied trucks often have plywood scuff guards that increase the truck weight.

Navistar previously produced a multi-stop Metro model from 1938 to 1972.

Shaughnessy said, "The market is now shifting back from the lightweight automotive type chassis to the more durable truck type vehicles that can handle heavier loads while delivering outstanding fuel economy."

The Metro II will carry a 12-month warranty with complete reimbursement of parts and labor. Also, certain major components will be covered for 24 months at 50 percent reimbursement for parts and labor. The van body structure will carry a five-year or 50,000-mile warranty.

West Germany's still tops in sales

By Richard Johnson

The West German auto industry — Europe's largest and healthiest — continued to pace other Western European nations in new-car sales through the third quarter of this year.

The Spanish market picked up momentum during the third quarter to move past the Netherlands into fifth place, behind West Germany, the United Kingdom, Italy and France.

The West German car market was 16.1 percent ahead of 1986 through the first nine months, according to industry estimates compiled by *Automotive News*. The gain was nearly double the European-wide 8.3 percent average growth through September.

New car sales in West Germany stood at 2,111,000 for the first nine months of 1987, against 1,818,000 over the same period last year. West Germany recorded sales of 2,379,000 for all of 1985 — less than 1 percent lower than 1984 volume.

Japanese producers, which face restrictions in Europe's other large markets (United Kingdom, France, Italy, Spain) continue to take advantage of West Germany's free market. They had a combined 12-percent share and increased sales 20.6 percent through September.

West German leader Volkswagen AG held 28.1 percent of its home market with VW, Audi and Seat brands. VW group sales were up 14.8 percent for the year.

Among Europe's other key markets, the United Kingdom was next best through the third quarter. Sales of 1,542,000 units were up 2.6 percent for the year.

The Italian market, with total volume of 1,413,000, was up 3.9 percent over its 1985 pace through the third quarter.

The French market also ran ahead of 1985. Sales totaled 1,361,000 through September, 5.6 percent better than the same period last year. ■

AUCTION ACTION

Florida auction builds new headquarters

WEST PALM BEACH, Fla. — Ground has been broken on an 18-acre site for a $1 million headquarters facility for West Palm Beach Auto Auction. The 19,000-square-foot building is scheduled to be completed in January.

Company officials expect the new facility to increase the auction's volume from 1,200 cars per week to 1,800. West Palm Beach Auto Auction is a subsidiary of Anglo American Auto Auctions Inc.

Expansion in Chicago

CHICAGO — Greater Chicago Auto Auction has broken ground for a six-lane, 26-acre facility.

The property is across the street from the company's present five-lane, 22-acre location, which will eventually house Auction Way Sales, a sister auction. Both facilities will hold dealer auctions every Thursday. The combined sites will be able to handle more than 3,000 vehicles a week.

Greater Chicago Auto Auction and Auction Way recently were purchased by General Electric Credit Auto Auctions.

Move for Southwest

PHOENIX, Ariz. — Southwest Auto Auction of Phoenix, part of the Cox Communication group, plans to move its auction site to Chandler, Ariz. Operations at the new location will begin in September 1987.

Kruse slates auction

SCOTTSDALE, Ariz. — The 16th annual Kruse Collector Car Auction and Show is slated for Jan. 9-11 at the Scottsdale Activity Center. More than 500 classic and collector cars are expected for the three-day event.

Mendenhall graduation

HIGH POINT, N.C. — Forty-four students graduated recently from the Mendenhall School of Auctioneering here. They were from 14 states.

Correction

Automotive News last week incorrectly identified one of the persons who pleaded guilty to federal charges involving odometer rollbacks (U.S. Charges Three in Odometer Scheme; More to be Named). The reconditioner was in fact not an employee of Manheim Auto Auction but an independent reconditioner based in Manheim, Pa.

Automotive News apologizes for any damage to Manheim's reputation caused by the error.

PRODUCTION

GM strike cuts U.S. car output

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Production of domestic cars dipped last week from the previous week's output as nine General Motors assembly plants closed for varying periods because of a strike at Delco Electronics Corp. in Kokomo, Ind.

Two other GM plants and part of a third were down for inventory adjustment.

Although the strike was settled early Friday (Nov. 21), GM was unable to say when workers would return to their jobs. The strike cost GM about 3,600 cars.

Delco workers walked out last Monday (Nov. 17), citing health and safety issues.

Last week's targeted production of 165,476 was 6.33 percent below the prior week's 176,658 and 7.11 percent below the year-ago week's 178,138.

Automakers assembled their 7-millionth car of the year last Wednesday (Nov. 19), almost three weeks behind 1985.

So far this year, 7,083,991 units have been assembled, 4.50 percent below the 7,417,637 completed last year at this point.

Companies split last week's scheduled output as follows: GM, 50.83; Ford Motor Co., 24.41 percent; Chrysler Motors, 14.32 percent; Honda of America Manufacturing Inc., 4.02 percent; New United Motor Manufacturing Inc., 2.54 percent; Nissan Motor Manufacturing Co., U.S.A., 1.76 percent; Volkswagen of America, 1.21 percent; and American Motors, 0.91 percent.

Here are the GM assembly plants and number of employees laid off by the Delco Electronics strike: Wilmington, Del., 3,600 workers; Fairfax, Kans., 5,000; Linden, N.J., 2,000; Lake Orion, Mich., 5,600; Willow Run, Mich., 4,200; Bowling Green, Ky., 1,000; Detroit (Clark Avenue), 5,500; Detroit-Hamtramck, 3,500; Wentzville, Mo., 6,000.

The 2,000 workers that had been temporarily idled at GM's Flint, Mich., plant are expected to return to work today. They had been laid off for inventory adjustment. The Fiero and G-car plants in Pontiac, Mich., also were down for inventory adjustment last week.

Chrysler's St. Louis (No. 1) plant resumed output last week. The plant had been down for model changeover since mid-July.

Ford slated Saturday (Nov. 22) overtime at its Wixom, Mich.; Edison, N.J.; and Wayne, Mich., plants.

Chrysler's Sterling Heights, Mich., plant was scheduled for overtime last Saturday.

Sterling Heights and Chrysler's Belvidere, Ill., and Newark, Del., plants are slated for daily overtime this week.

Goodyear buys out Goldsmith

CRAIN NEWS SERVICE

AKRON, Ohio — Goodyear Tire & Rubber Co. has kept control of its company, but the victory will cost about $3 million.

The company agreed Nov. 20 to pay Sir James Goldsmith and his partners $49.50 for each of their 12.5 million shares in the world's largest tire maker, or about $618.8 million. The European financier owns about 11.5 percent of Goodyear's shares. The stock had been trading at $41.75 on Nov. 19, the day before the buy-back was announced.

In addition, the company said it would pay Goldsmith for unspecified expenses and protect him against certain claims.

As part of the deal, Goldsmith agreed not to buy any Goodyear stock for five years.

Goodyear also announced a tender offer for 40 million of its outstanding shares at $50 per share cash, or $2 billion.

The company will carry out its previously announced plan to shed its Celeron Corp., Goodyear Aerospace Corp. and Motor Wheel Corp. subsidiaries. The restructuring came in response to Goldsmith's accumulation of shares for a takeover, and it reversed Goodyear's previous strategy of diversification.

In addition, Goodyear will implement early retirement programs and a wide range of cost-cutting measures.

"In my opinion, the sight of whole communities rising up against an unwarranted takeover attempt was the major factor in Goldsmith's decision to sell out," said Robert E. Mercer, chairman and chief executive officer of Goodyear.

Goldsmith said his move was influenced by pending legislation in Ohio that could have seriously impaired his bid. The proposed laws, for example, would have allowed Ohio companies to issue new shares with special voting rights to third parties without shareholder approval.

U.S. truck build dips during week

United States truck makers targeted production of 71,424 units last week, 1.77 percent below the previous week's 72,709 and 9.17 percent below the year-ago week's 78,632.

Due to a strike at Delco Electronics Corp. in Kokomo, Ind., General Motors cut out one shift on its van line at the Lordstown, Ohio, plant last Friday (Nov. 21). It idled 1,032 of the plant's 6,000 employees. The strike was settled early Friday (Nov. 21).

GM scheduled Saturday (Nov. 22) overtime for its heavy-duty line in Pontiac, Mich. Saturday overtime also was slated at Ford Motor Co.'s Lorain, Ohio, plant.

Chrysler Motors' Warren, Mich., plant is scheduled for daily overtime this week.

All plants will be closed Thursday and Friday (Nov. 27-28) for Thanksgiving.

Canada passes truck milestone

Canadian makers built their 700,000th truck of the year last Tuesday (Nov. 18), 11 days later than in 1985.

So far this year, 709,925 trucks have been assembled, 7.65 percent fewer than the 768,730 completed last year at this point.

Last week's scheduled truck output of 13,672 was 30.06 percent more than the previous week's 10,512 and 28.81 percent below the year-ago week's 19,205.

Car production was targeted at 25,695 units last week, 13.93 percent more than the previous week's 22,554 and 1.67 percent more than the year-ago week's 25,272.

So far this year, 951,052 cars have been built, 3.60 percent below the 986,595 completed last year at this time.

A number of General Motors assembly plants in the United States were idled last week (Nov. 17) by a strike at Delco Electronics Corp. in Kokomo, Ind. However, at press-time, no Canadian assembly plants were affected.

GM to save millions by electronic bill-paying

CRAIN NEWS SERVICE

NEW YORK — General Motors has decided to begin paying all of its 20,000 suppliers electronically, a move that will save the company hundreds of millions of dollars and likely will spur other corporations to stop making corporate trade payments by check.

GM now issues 400,000 checks a month, totaling $4 billion.

Benson K. Woo, GM's director of worldwide banking and cash management, said GM will begin to move suppliers for the Chevrolet-Pontiac-Canada Group, the Buick-Oldsmobile-Cadillac Group and the Truck and Bus Group to the electronic system by the end of the year.

Chrysler Corp. now pays 50 major suppliers electronically and hopes to get its other 350 major suppliers — those that produce at least 50 invoices a month — on electronic payments, according to Henry Nauka, general supervisor — accounts payable.

Ford Motor Co. hasn't yet moved to electronic payments.

GM's electronic payments system incorporates several notable features. Among them:

- Company officials have set up a network of eight banks outside the automated clearinghouse (ACH) to handle payments and trade information electronically.
- Working with the banks, GM executives designed the network to allow other banks to join and to allow other industries to use it to send electronic corporate trade payments and trade information.

Electronic Data Systems Corp., Dallas, a GM unit that developed the electronic system, plans to market it to other companies.

- Messages will be compatible with the standard electronic business data interchange standard — known as X12 and developed by the American National Standards Institute — which allows receiving companies to update their accounts receivable automatically without having to re-key the data manually.
- GM will encourage its suppliers to receive all trade information electronically — not just payments — to enhance their trade relationship and save costs, said Woo.

At a minimum, he said, suppliers will have to receive payments electronically. For suppliers unable or unwilling to move completely to electronic data interchange, GM will use the ACH to send payments to them, while sending trade information separately either in electronic or paper form.

He indicated that suppliers that do not move to a complete elec-

3-tier plan from Mitsubishi

Korea, U.S., Japan to supply 1988 lineup

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LA JOLLA, Calif. — Changing conditions will create an unconventional, three-tiered sourcing and pricing structure for Mitsubishi Motor Sales of America by 1988.

It will consist of entry-level cars from Korea, mid-level volume cars built in America and upscale and specialty cars and trucks from Japan, said Richard Recchia, executive vice president — general operations.

Next March, MMSA will start importing 30,000 entry-level cars a year from Korea's Hyundai Motor Corp., in which Mitsubishi Motor Corp. holds a stake. This move will boost volume otherwise restricted by allocations on Japanese car exports to the United States.

The two-door cars from Hyundai will be based on the same platform as the current Hyundai Excel, which essentially is a one-generation-old Mitsubishi Mirage-Dodge Colt.

To make room for it, Mitsubishi will drop the Mirage two-door hatchback and boost imports of the four-door Mirage, Recchia said. The dropped Mirages will give MMSA more of the higher-priced Cordia, Tredia, Starion and Galant imports.

Available volume will get another boost for 1988 with the startup of Diamond-Star Motors Corp., a joint venture of Chrysler Corp. and Japan's Mitsubishi Motors Corp. The output of the new assembly plant in Bloomington-Normal, Ill., will eventually grow to as much as 240,000 units annually, split equally between MMSA and Chrysler.

The cars Diamond-Star builds for MMSA will be marketed as mid-priced Mitsubishis. At that point, the Japanese export allocation will go only to higher-priced units such as the luxury Galant or lower-volume specialty cars like Starion, Recchia said.

Incentives grow; AMC Chevy join

By Edward Lapham and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

The current wave of incentives grew last week. American Motors replaced its dealer-rebate program with a retail low-interest-rate/rebate incentive, and Chevrolet Motor Division responded to Ford Motor Co. with a cash rebate to buyers of Cavaliers.

Chrysler Motors added incentives on its imported trucks.

The Chevrolet program offers $300 cash on all 13 Cavalier models. The program started Nov. 25 and covers retail deliveries from dealer inventories through Jan. 5.

A GM spokesman said the program is strictly "a response to the Escort and in no way is in conflict with" GM's promise to avoid annual-percentage-rate retail incentives.

Chrysler Motors started the retail incentive wave with an announcement Nov. 20 that it would offer cash or cut-rate loans on Aries, Reliant, pickups and vans. Last week, Chrysler expanded the program to include 1986 and 1987 imported Ram-50 and Power Ram-50 compact trucks.

The Chrysler plan runs through Jan. 20 and offers buyers interest rates of 3.9 percent on 24-month contracts, 4.9 percent for 36 months, 5.9 percent for 48 months ad 9.9 percent for 60 months, or $500 cash.

Last week, AMC replaced its dealer-rebate incentives that had been announced hours after Chrysler's package came across the wire.

AMC now will offer zero-percent APR financing for 24-month loans on 1986 Alliances, Encores and Jeep Comanches. AMC is offering 5.9 percent on 36-month contracts and 8.9 percent on 48-month contracts on 1986 Alliance,

Custom vans win major role in auto sales

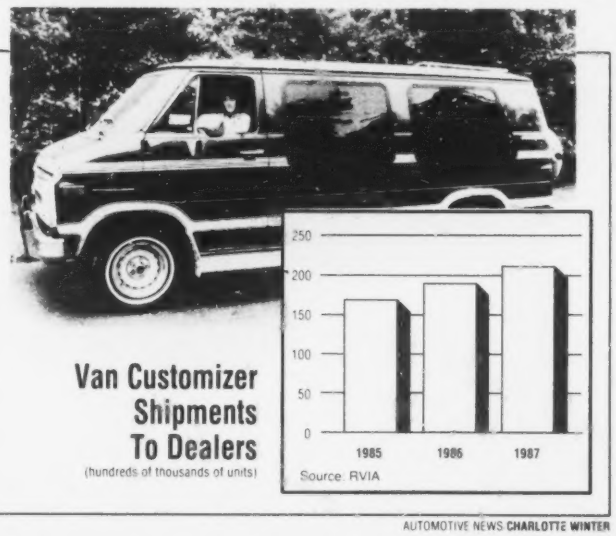
By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The recreational-vehicle industry has become an increasingly important stimulus to auto company and auto dealer sales, particularly through its van-customizing operations.

Customized vans, the largest single segment of the RV business, now account for half of all shipments.

As Dave Tarrant, Ford Division RV/OEM sales manager, said, the auto industry wouldn't have sold nearly the record 1.2 million vans it sold in the 1986 model year without the help of customizers.

Tarrant added that September 1986 was Ford's best retail sales month ever for RV vehicles going through its consignment pools — i.e., vans for customizing and cutaways for motor homes. October was the company's second-best month.



AUTOMOTIVE NEWS CHARLOTTE WINTER

Bob Rieth, special vehicle manager for Chevrolet, expects the RV industry to generate more than 100,000 sales for Chevrolet in the 1987 model year — 60,000 in vans for customizing and another 40,000-45,000 in chassis for motor homes.

RV manufacturers are expected to wholesale an estimated 386,000 units in calendar 1986, according to John W. DeWolf, an independent analyst for the Recreational Vehicle Industry Association.

That is up from 359,200 in 1985,

About face: Iowa dealers on fleet law

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

After working to pass a law to ban fleet incentives, the Iowa Automobile Dealers Association board of directors has voted to seek repeal of that same law.

The law banned incentives for business and rental fleets, and became effective in July. Iowa is the first state to enact such a law.

It forbids auto makers from selling cars to fleet buyers at prices lower than those given to auto dealers. Automakers argue that the lower prices are justified because large fleet orders give them economies of scale and allow them to smooth out otherwise bumpy production schedules.

Gary Thomas, executive vice president of the Iowa dealer association, said in a telephone interview with Automotive News that the

Autolatina

VW and Ford to cut losses with merger in Brazil, Argentina; VW's share 51%

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO — Ford Motor Co. and Volkswagen AG last Tuesday revealed details of the agreement to merge their subsidiaries in Brazil and Argentina.

The new unit, which will bear the name Autolatina Ltda., will be owned 51 percent by the German manufacturer and 49 percent by Ford. It will be presided over in Sao Paulo by Wolfgang Sauer, currently president of VW do Brasil. Wayne Booker, Ford Brasil president, becomes general manager.

Ford's tractor-making and consumer electronics operations in Brazil are not included in the deal.

The merger of the two groups' operations seeks primarily to cut overhead and reduce losses, which have become almost endemic in South America's two most important auto markets. The losses stem in part from government intervention, high local-content requirements and the economic climate.

There is still some question about the future of VW do Brasil's minority shareholders — the government of Kuwait and the Monteiro Aranha Group. Sauer revealed that negotiations are going on to swap each group's 10 percent for one percent of stock in the parent Volkswagen AG.

The new group is significant in its own right. Installed capacity at its 15 plants — 10 in Brazil and five in Argentina — totals 900,000 vehicles. Autolatina thus ranks about 11th in the world.

The group currently employs 75,000 people and has annual sales of $4 billion. It starts life with $1.8 billion in equity and, according to Booker, plans to invest $1 billion during the next five years in retooling and updating facilities.

Brazil's market absorbs some one million vehicles a year. VW is the market leader with around 40 percent and Ford is third with about 20 percent, following General Motors.

In Argentina, a market of some 150,000 units a year, Ford is the bigger. It ranks third with 19 percent while VW, a newcomer, is fourth with 13.5 percent. The front runners are Sevel and Renault. Sevel assembles Fiats, Peugeots and GMC vans.

This year VW's Brazilian sales (domestic and export) will be 380,000 while Ford's will be 195,000 in the country. In Argentina, Ford will sell 32,000 vehicles and VW will sell 23,000.

The total of 630,000 sales this year means the group has about 30 percent spare capacity. The aim is to minimize costs, particularly in Brazil which has the basics for a successful auto industry.

The problem, at least as far as Brazil is concerned, is that price controls have existed since 1977 in one form or another. Both VW and Ford have been in the red since 1981 as a result. This year, the German-owned company predicts a loss of $100 million, while Ford may lose as much as $40 million to $60 million.

And yet both companies want to stay in Brazil — for its domestic market potential and its prospects as an export base.

A recent study by the country's auto manufacturers' association, ANFAVEA, indicates that vehicle production could reach 5 million units by 1995 compared with 1.2 million today. Of that total, 3.5 million would be for export, according to ANFAVEA President Andre Beer.

Ford sends Cargo trucks from Brazil to the United States (a target of 10,000 units a year) and provides other truck lines in the United States and elsewhere with Brazilian diesel engines.

VW do Brasil, meanwhile, is embarking on a major export program to the United States, with a plan to ship 100,000 Fox sedans and station wagons a year. It is also to export 10,000 medium-sized trucks a year to be distributed by PACCAR, of Seattle.

Both companies have sorely felt the lack of full engine lines in the face of GM, which has 1.6-, 1.8- and 2.0-liter engines. VW's engine line tops out at 1.8 liters, while Ford currently has only a 1.6-liter and an export-only 2.3-liter. One idea is to power VW's Santana sedan with the Ford engine, for which there is spare capacity.

At the same time, the VW 1.8-liter engine could provide an interesting addition to the Escort. Ford's old 1.6-liter Corcel engine is even being considered for VW's new subcompact, the BY.

Autolatina wants to swap Brazilian Escorts for Argentine Sierras, and the potential for similar trade in parts is considerable. The problem is that Argentinian parts are more expensive to produce than Brazilian parts.

Meanwhile, the VW operation in Argentina, which assembles kits from Brazil, is earmarked for closure. Its functions will be transferred to one of the Ford plants in the country.

Behind Autolatina's formation, however, are the plans for economic integration of the two countries.

VW to spend $15 billion on product, plants by '91

Hahn: VW Group will surpass 3 million car sales in 1987.

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

WOLFSBURG, West Germany — Volkswagen Group will spend the equivalent of $15 billion during the next five years to bring out new products and equip its plants.

VW Chairman Carl Hahn predicted that in 1987, the company will for the first time surpass 3 million car sales (including Audis and Seats) worldwide. He said VW will hold on to first place in the European sales race even with Alfa Romeo part of the second-place Fiat Group.

Hahn dismissed as "a lot of hysteria" concern on European stock markets about a drop in net profits reported by VW Group for the first nine months.

Although VW will cooperate with Ford Motor Co. in South America, Hahn said the two companies are not a good match in Europe. He also said VW is disinclined to help Chrysler Corp. return to the European market by participating in a joint agreement.

Hahn said that Audi, saddled with troubles in the United States caused by publicity surrounding unexpected acceleration of Audi 5000s, will get back on track next year with introduction of the new 4000.

To build on VW's recent emergence as Europe's leading manufacturer, Hahn said the company will spend heavily in the next half-decade. The investment plan is part of a strategy to move upwards in production scale and sales.

"We will reach a spending pattern in our investment worldwide of better than 5 billion D-marks ($2.48 billion)," he said. "We plan for the next five years to invest better than 30 billion deutschemarks in new hardware and new products."

In the short term, he said, capacity increases will be achieved by "mobilizing the potential of Seat and mobilizing still hidden reserve capacities in our plants." Seat is the Spanish carmaker in which VW has taken a majority stake in preparation for a full takeover.

"We plan to increase Audi production next year from about 390,000 to 450,000," he said, citing a large backlog of orders for the new Audi 80 (4000 in the United States).

"There is no factory left of ours where production will not be increased," Hahn said. "But we don't have the idea of investing in a new plant, except for the (Seat) plant outside Barcelona."

The VW-Audi-Seat group is on

LeMans

More cars slated for North America

By Andrew Tank
STAFF CORRESPONDENT

Pontiac plans to introduce its LeMans June 11.

SEOUL, South Korea — Gun-Woo Park, general director of the export division of Daewoo Motor Co. Ltd., said he expects to ship about 120,000 LeMans subcompacts to Pontiac and 30,000 to 40,000 to General Motors of Canada in the first year of exports.

Park's figures are higher than those given recently by GM Chairman Roger Smith, who said imports would range from 80,000 to 100,000.

Pontiac Motor Division plans to introduce its LeMans June 11. GM of Canada hopes to launch it later in 1987.

"Pontiac has asked us for more, and GM of Canada wants them as soon as possible," said Park.

Daewoo Motor's $425 million LeMans assembly line at Pupyong now has a capacity of 167,000 cars a year. That is expected to rise to 278,000 in 1988. If extra orders are forthcoming from North America, it seems likely that Daewoo Motor will exceed its projected LeMans production of 140,000 units in 1987 and 167,000 in 1988.

There were reports that Pontiac planned to launch the LeMans as early as January or February. Park denied there has been a delay.

In the long term, Daewoo Motor hopes to broaden its export market. In Park's office, there is a map of the world with pins — indicating prospects — stuck in virtually every major city in Asia, Africa and South America. He also hopes to sell to Japan, but reckons Europe will be unlikely, since GM's Opel is already well established there. LeMans is an Opel design. He said an international marketing plan is still in the early stages, although a study group has been set up to investigate the complexities of entering the Japanese market.

Initially, most exports will be marketed through GM outlets, as in North America. But in Third World markets, Daewoo Motor might set up its own dealerships. GM owns 50 percent of Daewoo Motor, with the rest held by Daewoo Corp.

It recently signed an agreement with Nissan to make minivans and coaches. It permits Daewoo Motor to export those models to markets where Nissan does not have a manufacturing plant.

Park said he hopes to start exporting vans, too. However, Daewoo plans to make only 17,000 vans in 1987 and 30,000 in four years' time. Most will be absorbed by the domestic market in Korea.

Yue Loong: Nothing less than Feelings

TAIPEI, Taiwan — Yue Loong Motor Co., one of Taiwan's top auto manufacturers, has introduced its first self-developed compact car, called the Feeling 101.

In a separate development, the San Fu Industrial Co. has reached an agreement with Isuzu Motors Ltd. and General Motors to produce Isuzu's Trooper utility vehicle for export, according to the Free China Newsletter.

According to the newsletter, the car, designed and manufactured by Yue Loong, was unveiled here at the World Trade Center Complex by Vivian Wu Yen, chairman and president of Yue Loong, during a reception for government officials and business leaders. Lee Ta-hai, economic minister of Taiwan, was on hand to congratulate Wu Yen and the company for developing its own compact car.

Yue Loong, which is 25-percent owned by Nissan Motor Co., has been producing cars with Nissan's technical assistance. However, the Feeling 101 was produced solely by Yue Loong's own engineers and workers at its Sanyi plant in central Taiwan.

William Chao, chairman of the Council for Economic Planning and Development, praised the company for introducing the first car "with the country's own brand name" and called for continued efforts by domestic car makers to produce more locally built cars in the future.

"There is a long and difficult path to go," he said. "However, I call on you to overcome the difficulty and struggle for breakthroughs, so that more Chinese-made cars may run on the streets in the big cities around the world."

Although details of the car's production were not announced, Yue Loong officials revealed that the first 1,500 units of the 1.5-liter Feeling 101 were already sold through advanced orders. The company said it also plans to introduce domestic standard- and automatic-transmission models of its 1.6-liter Grand Tour car.

The Nissan-San Fu agreement, said to have been under discussion for some time, was firmed up after the Taiwanese firm obtained consent from Renault to go ahead with the project. Renault is currently providing San Fu with technical know-how for the production of Renaults in Taiwan.

San Fu officials were quoted as saying if all goes as planned, production of the vehicles will begin next March or April. The vehicles will be produced for Isuzu, which in turn will market them in the United States and Europe through GM's dealer network.

According to the publication, the agreement calls for San Fu to produce 40,000 Troopers annually in its existing facilities, while Isuzu will provide $100 million in production equipment, components and techniques for vehicle assembly.

Two years after the start of production, San Fu said Taiwanese manufacturers are expected to provide 30 percent of the components for the Trooper.

Levy expected to head Renault

PARIS — Long-time European steel industry executive Raymond Levy emerged last week as the frontrunner to take over as chairman of Renault.

Sources at the French automaker said Levy was a clear favorite to replace Georges Besse, who was assassinated Nov. 17.

Levy, 59, has been president of Belgium's Cockerill steel group since June 1985. He previously headed the state-controlled Usinor steel group in France, but was dropped by the then-Socialist government.

Levy was expected to be nominated late last week by the officials in the French government, which owns Renault. The nomination must be approved by the company's board of directors and ratified by the French cabinet.

The Renault board meeting scheduled for last Tuesday was canceled, apparently because top ministers had not then decided on a successor for Besse.

Levy has an appropriate background for taking charge at Renault. He was schooled at the Ecole Polytechnique, the prestigious French engineering school which produced Besse and several other titans of French industry. He also studied at the Massachusetts Institute of Technology.

Delco strike ends; parts lag hobbles GM

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

With the just-in-time inventory system backfiring, crippled General Motors assembly plants continued to close last week, even after a settlement was reached in the Delco Electronics strike.

Twenty assembly plants and four component plants have been affected by the five-day strike, which resulted in the layoff of more than 60,000 employees. Two assembly plants resumed production last week, and 11 are slated to come back this week. The other assembly plants will be down until Dec. 8.

Members of UAW Local 292 in Kokomo ratified an agreement Nov. 22 and some work resumed at the plant that night. But the assembly plants continued to go down last week as their thinned supplies of Delco radios and electrical components quickly dried up.

In a domino reaction, several component plants that supply the assembly plants closed down because their customers were not operating.

Other component plants, such as those of Fisher Guide Division, have used the delay to build inventories. A Fisher Guide spokesman said that there is a possibility that a few people will be affected at two of its plants this week.

Meanwhile, officials at UAW locals said the success of the Delco strike demonstrates that job loss through subcontracting and outsourcing can be curbed through a strike — or the threat of a strike.

In the Delco settlement, GM agreed to build radios in Kokomo, Ind., rather than in Mexico and to return subcontracted work to the local.

A UAW source remarked, "People who say that the strike has no place in modern labor strategy are wrong."

However, a source at a UAW local representing Ford Motor Co. workers said that Ford is less vulnerable to a massive shutdown, because just-in-time is less widespread at Ford.

UAW Vice President Donald Ephlin, head of the union's GM Department, said that the strike was the result of a breakdown in procedure.

Ephlin said that under the GM agreement, the union is notified of a plan to outsource. "We sit down and talk, and we're supposed to find a way to keep the work in house," he said. "We regularly succeed in doing that.

"Obviously that's the better result."

A UAW spokesman in Detroit said that, in the Delco settlement, GM also agreed to make a cash payment to some 400 workers affected by the subcontracting to other U.S. firms and to clean up plant areas the union claimed were health and safety hazards.

He said the agreement included some job classification reductions. Ephlin said the union agreed to "adjustments which were called for under the circumstances." He said no concessions were made, but he did not elaborate. Officials at Local 292 could not be reached for comment.

A GM spokesman said the company had no comment on the settlement.

The UAW views outsourcing and subcontracting as twin threats to job security. But Ephlin said outsourcing out of the United States also means "the better paying blue-collar jobs are going overseas. We consider the exporting of so many of our jobs a very serious problem."

Though companies claim they have to outsource certain products to be competitive, Ephlin said, "We don't necessarily agree to that. They sell their products in the U.S.; it is essential to provide jobs to Americans so they can buy those products."

Ephlin said that though most radios are outsourced to foreign countries, "We're proud that radios are still being made in Kokomo and will be in the future."

Ephlin said the United States needs an industrial policy to deal effectively with the "bloodletting" caused by foreign competition. He said that toward that end, he will serve on a new national Competitiveness Committee, which will be announced this week.

But he said that gains can be made at the bargaining table to curb outsourcing. He noted that provisions in the 1982 and 1984 national agreements "make it more difficult for a company to outsource."

For example, workers who lose their jobs because of outsourcing are eligible for the job bank and receive wages, benefits and, in

Japanese dip predicted as import sales increase

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Having satisfied pent-up demand in the U.S. market, the auto industry faces flat sales in 1987 and Japanese car sales will actually decrease, according to auto analyst Maryann Keller.

Speaking at the annual meeting of the Automotive Trade Association, National Capital Area, Keller predicted that the Japanese government will retain quotas at their current level of 2.3 million cars; however, higher prices resulting from the increased valuation of the yen will result in fewer sales for the first time since 1979.

However, she expects total import-car sales to increase by 200,000 units to 3.3 million in 1987, largely due to the presence of two Korean imports, Hyundai and the forthcoming Daewoo-produced Pontiac LeMans; Lincoln-Mercury's Mexican-built Tracer; and Volkswagen's Brazil-sourced Fox.

Keller predicted that sales will decline in both the car and truck sectors, to 10.3 million-10.5 million cars in 1987 (compared to 1986's forecast of 11.7 million) and to 4.3 million trucks (compared to 1986's forecast of 4.6 million).

She predicted that sales of imported light trucks will rise, however, from 800,000 units this year to 900,000 in 1987.

"The car market is reshaping itself," she said, adding that competitive, more than economic, forces are at work.

Keller: "The car market is reshaping itself."

For the first two years of this recovery cycle, demand outstripped supply, Keller said. But now the business has moved into a new phase in which overcapacity and competition are pressuring automakers. The change, according to Keller, "began in late 1985 when GM was caught with an enormous inventory of cars and offered the first mega-finance-rate incentive program."

It was the beginning of the phase in which car companies had to prod consumers to buy, she said. gram, she said.

Keller said that another factor that will depress sales is the record consumer debt level. That will translate into flat sales for several years, she said.

Keller sees the U.S. market of the future more closely resembling the Japanese and European markets today. There, manufacturers are competing for share in a robust market, yet are losing money.

Today, "the United States is the only major profitable market in the world," she said. Both European and Japanese manufacturers count on profits here to sustain them in their home markets. If those profits go away, the worldwide auto industry is due for some major changes, she said.

It will be a market in which incentives will be part of the normal business pattern and manufacturers will be "fighting for shelf space." As a result, dealers — especially mega-dealers — will become more important, Keller said.

The number of supermarket mega-dealers will increase, and "the era of public ownership of car dealerships is near," Keller predicted. Public ownership "opens up huge capital markets" heretofore unavailable to dealers.

Perhaps the only stumbling block would be dealers' reluctance to relinquish total control to "an amorphous group of stockholders," she said.

Keller is vice president of Furman, Selz, Mager, Dietz & Birney.

GM reported trying to sell EDS

Automaker denies it's on block, but AT&T tells of talks

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Just two years ago, General Motors was counting on its Electronic Data Systems subsidiary to lead its technological charge into the 21st century.

But now there are reports that GM recently considered selling EDS. And although GM has denied that its computer services company is for sale, analysts were quick to speculate on the situation following a Wall Street Journal article (Nov. 17) that reported GM had talked with AT&T about selling all or part of EDS.

AT&T later confirmed that it had wide-ranging discussions with the automaker "that didn't preclude investment." A GM spokesman said EDS was not for sale and when asked if it had been offered, would not comment further.

However, GM Chairman Roger Smith, in an interview published in the Detroit Free Press (Nov. 26), said, "EDS isn't for sale; we have never had it on the block or anything like that."

He said that GM and AT&T have continual talks because EDS is a large customer of AT&T. "We are discussing some other things with AT&T that would result in some different arrangements involving EDS and maybe even Hughes Aircraft," Smith said.

On several fronts, the sale of EDS would be understandable, analysts said. But overall they see the GM-EDS linkup, despite the problems it has created, as a venture worth preserving.

Among the possible motives is money. By selling EDS, GM could bolster its cash reserves by several billion dollars. Although analysts doubted that GM could get its reported asking price of twice the $2.5 billion it paid for EDS in 1984, a sale would likely have brought a substantial gain. The price was reportedly an issue in the discussions.

Another consideration may have been EDS Chairman H. Ross Perot. The founder of EDS, now a GM board member, has been an outspoken critic of GM corporate policy. He has accused GM's top brass of being alienated from customers and has called for the end of some executive perks.

According to analysts, the comments have stung GM's tightly knit board. Selling EDS would solve the problem.

The EDS talks may also reflect GM's second thoughts about its approach to new technology.

Philip Fricke, an analyst with Goldman Sachs & Co., said the discussions appear to have stemmed from GM's announcement last spring that it was cutting capital spending.

In addition, he said, GM has questioned whether the level of technology at its highly automated Hamtramck, Mich., assembly plant, for example, is necessary to produce a quality product. Problems with the new technology led to production delays after the plant opened in 1985.

In other moves this year, GM has scaled back spending for its Saturn project and has shelved other programs, such as its hi-tech GM80 project to replace the Pontiac Firebird and Chevrolet Camaro.

"Perhaps within the total reassessment, it stands to reason that the role of EDS may also be reassessed," Fricke said.

GM's absorption of EDS has taken longer and has been more expensive than expected. The cultural clash that resulted when thousands of GM workers switched to EDS has been well publicized. But despite the problems, other analysts contend that GM and EDS have made significant strides in integrating operations.

In addition, they point out, other factors would make the sale of EDS a questionable move.

On a practical front, EDS would be hard to unravel from GM. Though the merger itself was hardly smooth, analysts said, se-

GM shuffles C-P-C engineering bosses

Several top engineering executives at General Motors' Chevrolet-Pontiac-Canada Group were shuffled into new positions last week, as the division named new chiefs for Chevrolet engineering, C-P-C advanced engineering and C-P-C vehicle engineering.

Effective today F.J. Schaafsma, most recently head of the now-defunct GM-80 Camaro-Firebird replacement program, takes over at Chevrolet engineering, replacing Donald L. Runkle, who becomes director of advanced engineering for C-P-C.

Kenneth R. Baker, whom Runkle replaces, becomes C-P-C director of vehicle engineering, replacing D.R. Genord, who moves to product assurance and test validation.

C-P-C said the assignment juggling was prompted in part by the impending retirement of Russell Gee, group director for powertrain systems, who will depart Jan. 1.

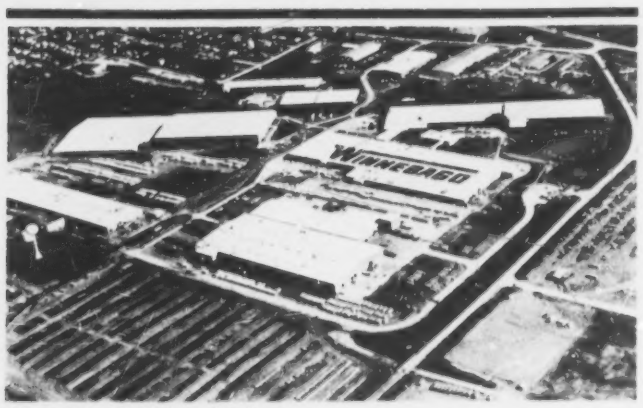
Also, Jerry Rivard will move from director of test validation to a new position as manager of carryover car programs, reporting to R.J. Schultz, vice president and group director of engineering for C-P-C.

Schaafsma's "extensive background at Chevrolet" helped win him the job as engineering chief for the division, C-P-C said. He came to Chevrolet in 1965 and was promoted to assistant staff engineer for vehicle development and tests in charge of the Camaro program in 1979 and the Corvette program in 1981.

Schaafsma was named chief engineer for the Celebrity, Monte Carlo and Citation in 1983 and moved to the GM-80 program in 1984.

Runkle joined Chevrolet in 1968. In 1982 he was named chief engineer for the Camaro, Caprice and international programs. Later that year he joined Buick as assistant chief engineer. He was appointed head of Chevrolet engineering in 1984.

Baker began his career at Buick in 1969 and was promoted to assistant chief engineer in 1978. In 1979 he was named project manager for GM car programs. Three years later he rejoined Buick as manager of advanced design and special projects. In 1984 he became assistant chief engineer for the Buick-Oldsmobile-Cadillac Group. A year later, he was appointed head of C-P-C advanced engineering.



Winnebago's twin milestones
Winnebago Industries Inc., Forest City, Iowa, marked two milestones by producing its 200,000th motor home and commemorating 20 years of motor home manufacturing. Winnebago uses automotive-type manufacturing in its 2.5-million square-foot facilities which include sophisticated chassis lines for four-wheel-drive vehicles.

Sept. brings 13% increase in shipments

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale shipments of RVs were up sharply in September, according to the Recreation Vehicle Industry Association.

The industry shipped 30,000 RVs in September, up 13.6 percent from September 1985. For nine months of calendar 1986, shipments of 298,900 units were up 4.9 percent from a year earlier.

The industry shipped 14,800 van conversions in September, up 24.4 percent from last year. It shipped 146,100 for the first nine months, up 14.6 percent.

Recreational Vehicle Wholesale Deliveries

	September 1986	September 1985	% change	9 months 1986	9 months 1985	% change
Travel trailers	6,600	6,400	+ 3.1	67,900	67,000	+ 1.3

TOTAL ALL RVs	30,000	26,400	+ 13.6	298,900	284,900	+ 4.9

Source: Recreational Vehicle Industry Association.

Domestic van manufacturers shipped 10,000 full-sized van chassis to converters during the September, off from 15,800 a year ago. They shipped 99,200 full-sized vans to converters during the first nine months, down from 108,200 in like 1985.

However, their minivan chassis shipments of 2,400 units in September were up from 1,300 a year earlier. Nine-month minivan chassis shipments of 23,700 units were up from 3,600 last year.

September motor home shipments of 5,500 were up 17.0 percent from last year. Their nine-month total of 51,500 was off 7.2 percent.

Van converters cater to special needs of buyers

By Patricia A. Kelsey
STAFF CORRESPONDENT

ST. PETERSBURG, Fla. — Mark Megin, owner and president of Sans Vans, of Largo, is an example of today's Florida van converters. He caters to people who can't find what they want in mass-produced factory vans.

Although a smaller converter, Megin has one of the oldest operations in his area. He said his production of 75 units a year allows him to focus on craftsmanship.

Megin sits down with potential customers to spec the van to exact requirements.

His low-line conversion package is about $5,000. With the chassis, prices can run $20,000 to $35,000. His high-top conversion packages are about $7,000.

Megin sells mostly to young professionals, with $50,000-a-year household incomes, and secondarily to persons in the 50-and-up age group who may use a van for travel.

He sells 70 percent of his vans through dealers, 30 percent through direct retail.

DMC Vans, St. Petersburg, has been in operation three years. It produces about 150 units a month, according to owner Dale Mock.

His Florida operation is essentially an outgrowth of a DMC Vans operation in Butler, Wis., which has been in business for 13 years.

DMC distributes through Ford, Dodge, Chevrolet and GMC dealers in Miami, Orlando, Sarasota and the Tampa Bay area.

It offers four low-top and three high-top models, as well as pickups, RVs, campers, Suburbans and Blazers.

Its most popular options are elaborate sound systems, rear air conditioning and rear heating units.

Mock said the conversion market is "fabulous." He attributes it to the downsizing of cars.

The company's lower-priced models are more popular in northern markets because of handling in the snow, while southern markets go for the more expensive units with the rear air and heating units, Mock said.

Mock operates a full-service operation for conversions. He claims to have one of the largest parts and accessories stocking facilities in Florida.

Incentives end; Canada unhurt

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Domestic new-car sales in Canada rose 4.9 percent in October despite the expiration of widespread consumer incentives.

Canadian dealers delivered 65,837 cars in October compared to 62,720 in September. Incentive programs, which had been offered by General Motors, Ford Motor Co. and Chrysler Motors for all of September, expired early in October.

Even though October car sales were better than September's, they were 5.0 percent below those of October 1985 when Canadian dealers delivered 69,361 cars.

Sales for the first 10 months of 1986 were off 1.9 percent from the same period in 1985. The 10-month total was 678,365 this year compared to 691,546 last year.

GM accounted for the biggest September-to-October car sales increase. Sales rose 16.7 percent to 35,303 from from 30,239.

A GM spokesman said the 1987 Oldsmobile Delta 88 and Buick LeSabre were strong sellers in October.

Ford recorded a gain of 4.3 percent from September, as sales rose from 15,075 to 15,727. A Ford spokesman said sales were steady throughout October despite the fact that Ford incentives expired after the first week of the month. Combined sales of Taurus and Sable set a record of 3,389 units — 2,449 for Taurus and 940 for Sable.

Showing September-to-October declines in car sales were Chrysler Motors, down 13.5 percent from 15,502 to 13,399; American Motors, down 37.5 percent from 1,298 to 810; and Volvo, down 1.3 percent from 606 to 598.

Canadian new-truck sales for October improved 4.9 percent from the same period a year ago. The monthly totals were 31,089 this year and 29,626 in 1985. Chrysler was the only truck maker to show a decline.

For the year, truck sales were up 9.5 percent.

Exports dip for Toyota, Nissan, Mazda

TOKYO — Three of Japan's major automakers reported declines in both vehicle exports and production for October.

Toyota Motor Corp., Nissan Motor Co. and Mazda Motor Corp. said the downturns resulted mainly from the appreciation in the value of the yen.

Toyota managed to register an increase in domestic sales in October, compared with the same month a year ago.

Industry observers also blamed the overall decline on the Japanese government's curb on car shipments to the European Economic Community and the continuing drastic drop in sales to China, the Middle East, Oceania and other Asian countries.

Toyota, the No. 1 auto manufacturer in Japan, said its exports in October decreased 9.1 percent to 156,988 units for the fourth consecutive month-to-month decline compared with last year. The October total included 102,825 cars, down 0.7 percent from October 1985.

Toyota said its production totaled 337,632, down 0.1 percent from the volume recorded in the same month last year. Toyota's domestic vehicle sales in October spiraled 18.8 percent over last year to 178,255 units.

However, Toyota said its share of the domestic car market (excluding minicars) in October surpassed 50 percent for the first time ever. Sales totaled 144,520 units, and market share was 51.4 percent.

Nissan, Japan's second largest car company, said its October exports totaled 94,853 units, down 18.8 percent from last year. The October figure included 74,675 cars, down 19.0 percent.

Nissan's vehicle production for the month plummeted to 170,175 units, down 20 percent, the biggest year-to-year decline since a 25 percent drop in August 1974, at the start of the first series of oil price hikes. The company's domestic vehicle sales totaled 72,351, down 5.7 percent.

Mazda said October exports dipped 26.7 percent to 53,623 units. The total included 38,368 cars, down 25.0 percent. Mazda's production in October skidded 13.9 percent to 99,182 units, while domestic sales in October were off 0.4 percent at 38,667 units.

Korean unions hope for legal strikes, mediation

By Andrew Tank
STAFF CORRESPONDENT

SEOUL, South Korea — Korea's weakening union movement is hoping to benefit from the reform of labor laws which could also have important implications for the fledgling auto industry.

A package of labor law reforms is being presented in Korea's National Assembly this year. The major changes would reduce the lengthy procedure which presently makes it almost impossible to call a legal strike and would include a provision for an independent arbiter to offer mediation between employers and unions.

Jung Sik Min, president of the Federation of Korean Metalworkers Trade Unions, expects those changes to become law in the current session of the National Assembly.

Actual union organization in Korea is based on the individual company rather than on a national basis. The Metalworkers' Federation is the country's second largest union, with 130,000 members in all fields of engineering industries and about 20,000 in the auto industry.

Hyundai, Korea's biggest auto firm, is not unionized, but the other two major competitors — Daewoo Motor and Kia Motor — as well as many auto parts firms, have fairly strong union structures.

Min's optimism for reform may be premature. The government of President Chun Doo Hwan recently cracked down on labor organizations, students and other political activists, and seems likely to resist moves allowing greater militancy.

Korean unions have been prohibited from any activities the government deems "political" ever since the military coup lead by Gen. Park Chung-hee in 1961. In Korean terms, almost any coordinated industrial action by unions or others can upset the authorities.

There have been strikes — such as a 10-day stoppage at Daewoo Motor last year — but union leaders have generally been punished by the law.

Min said that union claims must be judged according to the financial health of the company. He quoted the example of Kia Motor, which teetered on the edge of bankruptcy in the early 1980s and has emerged as a healthy enterprise due to concerted joint worker-management cost-cutting measures.

Any strength of Korea's auto unions is blunted by the lack of a union at Hyundai and also at Dong-A, a small truck and bus maker. "We're trying to unionize them, but the employers are very strongly against it," Min said.

Autoworkers in Korea are paid about $375 a month, including allowances. Many are working overtime, bringing take-home pay to around $500 a month.

That is about 20 percent higher than the pay of other industrial workers and is close to the average for all workers (including clerical and managerial grades) in manufacturing.

Ford praised in book on top corporations

Dave Zoia
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. will be portrayed as a prime example of an American company gone right in a book due next year.

Robert Waterman (one of the authors of "In Search of Excellence") will write the untitled book. It will profile 50 U.S. corporations that during the past few years have gone through a period of extensive "change and renewal."

Waterman said Ford stands out as one of the better examples in the book, "because of the company's size and importance to America."

"There's been a fundamental change at Ford in regard to how management treats people," he said. "Ford management woke up to the threat of overseas competition."

Waterman, formerly of McKinsey & Co., San Francisco, now runs his own consulting firm, Waterman & Associates, also San Francisco-based. He and Tom Peters (also formerly of McKinsey) co-authored "In Search of Excellence," a 1982 book detailing exemplary management techniques employed by some U.S. companies.

Waterman admits his new book won't contain the kind of exhaustive research on Ford that David Halberstam undertook for "The Reckoning," his book profiling both Ford and Nissan. Ironically, Halberstam's book cites Ford as an example of what went wrong with the automotive industry in the United States.

But in time spent touring some Ford facilities and talking to workers and top management, Waterman liked what he saw.

Is Ford management that exceptional?

"I'm not sure I'd call them exceptional," Waterman said. "They are just the right people for the times — they're divided up well in terms of interests."

A key attribute of Ford's top executives is their willingness to listen, he said.

"Ford's future looked pretty bad five years ago," Waterman said. "But since then, things have turned around.

"Management has opened up communication lines. They've been very receptive to ideas."

As a basis for his analysis of the automaker, Waterman interviewed several top Ford executives, including Donald E. Petersen, chairman; John Risk, program manager for medium and large front-drive cars; and John J. Telnack, chief design executive, North American Design.

He also hopes to catch up with former Ford Chairman Philip Caldwell and Louis C. Veraldi, current head of luxury and large car engineering and planning, before the book goes to press.

Waterman said he was impressed with Ford's automated Taurus-Sable assembly plant in Chicago, as well as what he found to be a highly motivated workforce.

But he admitted Ford still has room for improvement.

"You see some things that make you wonder," he said. "But the contrast with the way the company was five years ago is like night and day."

The book will be published by Bantam Books.

U.S. site choice near for Subaru-Isuzu plant

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — A site selection for the U.S. plant being built jointly by Fuji Heavy Industries (Subaru) and Isuzu Motors Ltd. could be announced "any time, as soon as this week or maybe in a month," according to an Isuzu spokesman.

Nihon Keizai, a local economic newspaper, reported the automakers "are expected to make a final decision in early December and begin work on establishment of a new firm and construction of an assembly plant, which will begin operating in 1989."

Representatives for the automakers denied as "pure speculation" reports that southeastern Indiana is the likely choice.

Stephen Merrick, who is in charge of operations in Japan for the State of Indiana, also said that a site had not been selected.

Merrick said Indiana Governor Robert D. Orr was in Japan recently but did not meet with officials of the automakers.

Another Midwest representative, who asked not to be identified, said both Greenfield and Lafayette, Ind., were strong contenders.

He also said a debate developed between the two automakers when Isuzu pushed its bus chassis plant at Russellville, Ky., as the site.

However, the source said Isuzu's proposal was shelved because Toyota Motor Corp. already selected Kentucky for its plant, and the Japanese government has been encouraging the industry not to construct more than one factory in any state.

The Japanese newspaper story said the two automakers chose Indiana because the state government offered various preferential measures.

In addition, it said, in Indiana, "Japanese automakers can transport parts and finished cars easily on Route 37, which runs near the state, and hire technicians and ordinary workers from big cities such as Cincinnati."

The plant will produce cars, multi-purpose four-wheel-drive vehicles and small trucks. Output will be split between the two makers.

Sales climb without incentives

The retail car market in the United States, Nov. 11-20, could have been described as a lame duck.

The period fell between sales incentive programs, but its performance, a 6.06 percent gain above the like 1985 period, was relatively strong.

Healthy year-to-year gains were reported by American Honda Motor Co., up 99.42 percent; Nissan Motor Corp. in U.S.A., 25.61 percent; Chrysler Motors, 18.40 percent and Ford Motor Co., 17.14 percent.

The similar 1985 period offered incentives in the form of cut-rate car loans.

In mid-November this year, sales skids were reported by American Motors with a drop of 51.30 percent, Volkswagen's U.S.-built cars at 29.50 percent and General Motors off 4.20 percent.

Job losses to Mexico in question

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A program to promote Mexico as a low-cost manufacturing base for U.S. companies, initially backed by the Commerce Department, came under fire during a congressional hearing last week.

The department planned to spend more than $166,000 to mail brochures to 120 companies, advertising an early-December exposition in Acapulco to promote investments in that country's "Maquiladora" or "golden mill" area along the U.S.-Mexican border.

The Commerce Department has since backed out of the program and Congress barred the brochure expenditure in the omnibus funding bill approved last October. But the House Economic Stabilization Subcommittee scheduled the hearing to find out about the Commerce Department's initial plans.

In defending the department's role, Alexander M. Good, director general of the U.S. Foreign and Commercial Service, testified that "it (the Maquiladora program) has maintained employment that otherwise would go to the Pacific rim."

Among those disagreeing was the UAW. Steve Beckman, a union economist, said, "The efforts of the Commerce Department to encourage American companies to invest in low-wage countries instead of in this country is, in our judgment, an outrage."

Under the program, U.S. companies setting up assembly operations across the border may ship components, tooling and machinery into Mexico duty-free if the built-up output is exported.

Duty upon re-importation into the United States is assessed only on the Mexican content, which is usually only the low-cost labor.

The Commerce Department claims the program preserves U.S. jobs among supplier industries while offering manufacturers a low-cost alternative to final assembly.

Beckman countered that those supplier jobs "are no substitute for the U.S. jobs lost to the foreign countries that receive the investment. In fact, the U.S. supplier jobs remain when Maquiladora investments are made because they are cost-effective for the company, not because of any 'loyalty' by the company or the proximity of the Mexican border. The question asked by the company is where it can make the biggest profit."

Automotive News appoints reporter, circulation personnel

David Versical, 31, former business editor for the Oakland Press, Pontiac, Mich., has joined the Detroit staff of Automotive News as a reporter.

Versical joined the Oakland Press in 1984 as a general assignment reporter; he subsequently became a business writer and then a copy editor.

Versical

He worked for Gale Research Co., Detroit, from 1978 to 1982, as an assistant editor and later an associate editor.

He is a 1983 graduate of Northwestern University's Medill School of Journalism and received his undergraduate degree from Michigan State University.

Automotive News has also expanded its circulation department.

Leah DiPippo, former account supervisor for Marketing Associates, Bloomfield Hills, Mich., has been named circulation manager. At Marketing Associates, she coordinated the Ford and Lincoln-Mercury corporate, national and dealer programs.

DiPippo

LoPrete

DiPippo also will manage the circulation activities of two other Crain Communications publications, Rubber and Plastics News and Tire Business.

She is a graduate of Western Michigan University.

Thomas R. LoPrete has been named to the newly created position of market information manager. As such, he will track emerging market segments of the auto industry and work with both the marketing and circulation departments of Automotive News.

Before joining Automotive News, LoPrete was an account executive at McCann-Erickson on the Kelsey-Hayes and Fruehauf Corp. accounts. He is a graduate of Wayne State University, Detroit.

Parts marking for 80 cars; NHTSA says most comply

WASHINGTON — NHTSA has selected 80 vehicles to meet parts marking requirements of the government's anti-theft standard for 1987 model year.

In most instances, manufacturers already know which vehicles require marked parts and already comply with the standard, NHTSA said.

The agency said models were selected on the basis of national auto theft data for the models' 1984, 1985 and 1986 counterparts.

Some vehicle designs new for 1987 were included, despite no theft history.

The parts marking requirement is intended to reduce thefts by labeling major vehicle parts with vehicle identification numbers.

NHTSA allowed 12 vehicles that otherwise would have been designated as theft-prone, to avoid parts marking because manufacturers agreed to install anti-theft devices as standard equipment.

Those vehicles include: Sterling (manufactured by Austin Rover), Chrysler Conquest, Cadillac Allante, Chevrolet Corvette, Isuzu Impulse, Mitsubishi Galant and Starion, Nissan Maxima and 300-ZX, Toyota Celica Supra and Cressida and Audi 5000-S.

The Alfa Romeo Milano, Mazda RX-7 and Porsche 924-S do not have to meet the parts-marking requirements for 1987 because the vehicles were introduced as 1987 models before April 24, 1986.

NHTSA's full listing runs as follows:

BMW: 3-series, 5-series, 6-series, 7-series.

Chrysler Motors: Chrysler Executive Sedan/Limousine, Fifth Avenue, Laser, LeBaron/Town & Country, LeBaron GTS; Dodge Aries, Daytona, Diplomat, Lancer, 600; Plymouth Caravelle, Gran Fury, Reliant, Q-coupe.

Ferrari: Mondial, 308, 328.

Ford Motor Co.: Ford Mustang, Thunderbird, Mercury Capri, Cougar, Lincoln Continental, Mark VII, Town Car; Merkur Scorpio, XR4Ti.

General Motors: Buick Electra, LeSabre, Riviera; Cadillac DeVille, Eldorado, Seville; Chevrolet Camaro, Nova; Oldsmobile Delta 88, 98, Toronado; Pontiac Bonneville, Fiero, Firebird.

Honda: Acura Legend.

Jaguar: XJ-S, XJ-6, XJ-40.

Maserati: Biturbo, Quattroporte.

Mazda: GLC, 626.

Mercedes-Benz: 190D/E, 260E, 300D/E, 300TD, 300SDL, 380SEC/500SEC, 380SEL/500SEL, 380SL, 420SEL, 560SEL, 560SEC, 560SL.

Mitsubishi: Cordia, Tredia.

Porsche: 911, 928.

Reliant: SS1.

Saab: 900, 9000.

Subaru: XT.

Toyota: Camry, Celica, Corolla/Corolla Sport, MR-2, Starlet.

Volkswagen of America: Audi Quattro; Volkswagen Cabriolet, Rabbit, Scirocco.

PRODUCTION

Holiday, strike cut car output

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

A combination of the Thanksgiving holiday and the General Motors plant closings, due to the Delco Electronics Corp. strike, drastically reduced last week's targeted production from the prior week's output.

Automakers scheduled 80,162 cars last week, 48.17 percent below the previous week's 154,654, which was also affected by the strike.

Although the strike has been settled, several GM assembly plants remain affected.

Last week's estimated production was 18.99 percent below the year-ago week's 98,954, which was also a holiday week.

So far this year, 7,153,331 cars have been assembled, 4.81 percent below the 7,514,502 completed last year at this point.

Companies split last week's scheduled output as follows: GM, 45.07 percent; Ford Motor Co., 28.22 percent; Chrysler Motors, 15.59 percent; Honda of America Manufacturing Inc., 4.98 percent; Nissan Motor Manufacturing Co., U.S.A., 3.64 percent; Volkswagen of America, 1.50 percent; and New United Motor Manufacturing Inc., 1 percent.

American Motors' Kenosha, Wis., plant was idle last week (Nov. 24) for inventory adjustment.

The plant is not expected to resume output until Dec. 8.

Additional GM assembly plants idled last week (Nov. 24) by the Delco Electronics strike were Van Nuys, Calif., until Dec. 8; Norwood, Ohio, until Dec. 8; Leeds, Mo., until Dec. 8; Lordstown, Ohio, until Dec. 4; and Janesville, Wis., until Dec. 3.

The following GM plants were down all last week because of the strike: Fairfax, Kans.; Bowling Green, Ky.; Detroit (Clark Avenue); Willow Run, Mich.; and Wentzville, Mo. They are scheduled to return to work today (Dec. 1).

GM's Detroit-Hamtramck plant will resume output Dec. 3. Its Lake Orion, Mich., plant returned to work Nov. 24, and the Wilmington, Del., plant resumed production Nov. 25. Both were down because of the strike.

GM will close its Fiero plant in Pontiac, Mich., Jan. 5 for two weeks for inventory adjustment.

On Jan. 19, production at that plant will be reduced from two shifts at 22 cars per hour to one shift at 30 cars per hour. About 600 employes will be laid off as a result of the adjustments.

There was no Saturday (Nov. 29) overtime slated at any car plants due to the Thanksgiving holiday.

Japan firms to produce parts in U.S.

TOKYO — Two Japanese parts manufacturers have announced plans to establish manufacturing facilities in the United States, which would supply components to both Japanese and U.S. automotive assembly plants.

Stanley Electric Co., Tokyo, said it has formed a joint parts venture in Battle Creek, Mich., with Kyokuto Boeki Kaisha Ltd., a trading firm, to produce automotive electrical components.

Showa Mfg. Co., Tokyo, will construct a plant in Sunbury, Ohio, by early 1988 to make shock absorbers primarily for U.S. and Canada-produced Hondas.

The Stanley Electric venture, capitalized at $1 million, will be owned 60 percent by Stanley Electric, 30 percent by Kyokuto and 10 percent by the Ohio-based Stanley Electric U.S. Co. Stanley Electric's wholly owned subsidiary.

The company will produce and market a wide range of parts including car lamps and electronic components. They will be offered to Japanese and U.S. car manufacturers, which are stepping up U.S. output to cope with the yen's rise against the dollar, according to Hisao Fujiwara, Stanley Electric general manager.

"We can't help but undertake U.S. production because we were requested to do so by our clients, including Mitsubishi Motors Corp., Honda and Toyota Motor Corp.," he said.

MMC owns 3.2 percent of Stanley Electric, while Honda has a 4.2 percent stake in the company.

Showa, which is 36.4 percent owned by Honda, will produce some 1.6 million shock absorbers annually for Honda and other automakers.

Metals group renamed ASM International

METALS PARK, Ohio — The American Society for Metals has changed its name to ASM International.

ASM said the change resulted from increased use of materials such as composites, ceramics, plastics and electronics.

Truck build OK for Thanksgiving

Last week's scheduled truck output decreased from the previous week's build due to the holiday and the General Motors plants affected by the Delco Electronics Corp. strike.

Estimated production of 49,221 units last week was 18.68 percent below the prior week's actual build of 60,531 but was 8.01 percent more than the year-ago week's 45,569, which also included the Thanksgiving holiday.

So far this year, 3,246,514 units have been assembled, 2.44 percent more than the 3,169,192 completed last year at this time.

Here are the GM plants and number of workers that were idle at various times last week due to the Delco Electronics strike: St. Louis, 1,800; Moraine, Ohio, 2,470; Pontiac, Mich., 1,900; Shreveport, La., 2,200; and Flint, Mich., 6,257.

Because of the holiday, there was no Saturday (Nov. 29) overtime slated at any truck plant.

Canadian auto production slides

Canadian automakers targeted production of 24,544 cars last week, 4.48 percent below the previous week's 25,695 and 0.13 percent more than the year-ago week's 24,512.

So far this year, 975,596 units have been assembled, 3.67 percent below the 1,012,769 completed last year at this point.

Truck output was scheduled at 13,102 units last week, 5.73 percent below the prior week's 13,899 and 31.09 percent below the year-ago week's 19,012.

So far this year, 723,254 trucks have been built, 8.21 percent below the 787,935 assembled last year at this time.

A strike at Delco Electronics Corp. in Kokomo, Ind., forced General Motors to close its plant in Ste. Therese, Quebec, last Tuesday (Nov. 25).

The plant is expected to resume production Dec. 3.

Chrysler Motors' Pillette truck plant in Windsor, Ontario assembled its one millionth Dodge Ram Van/Wagon last Friday (Nov. 28).

SHOWDOWN

Smith-Perot rift ends in $750 million buyout

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

It was what experts on corporate chemistry might have expected when two strong personalities find themselves heading in opposite directions in the same boardroom.

General Motors Chairman Roger B. Smith and H. Ross Perot, chairman of GM's Electronic Data System subsidiary and GM's single biggest shareholder, brought their two-year partnership to an end last week.

And to the thousands who looked on, the professed commitment to link the nation's No. 1 automaker with the technological expertise of a top computer service firm seemed to lose its luster because of two individuals not getting along.

Perot, who in recent months had become increasingly outspoken in his criticism of GM, agreed to step down from the GM board and relinquish his EDS chairmanship in exchange for $700 million — roughly twice the market value of his shares. And Perot got a similar deal for his closest long-time associates, bringing them another $50 million.

Those top EDS executives — Morton H. Meyerson, J. Thomas Walter Jr. and William K. Gayden — will divide the $50 million for leaving the company.

EDS's new chief executive is its current president, Lester Alberthal. In one analyst's view, Alberthal will use his quiet style to restore some sense of calm inside EDS and refocus attention on its business.

GM also announced that it was linking its high-technology defense and electronics units into a single business group. It will include EDS, Hughes Aircraft, Delco Electronics and GM's defense operations.

The group, which has not yet been named, will be headed by Donald Atwood, GM's executive vice president and a GM board member.

"We believe that this new operational alignment will be an important and logical step for GM as we continue to devote our energies and resources to

Layoffs extend to new plants amid GM woes

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

General Motors announced last week it will slash production at three of its newest plants and lay off 4,500 workers.

To GM workers and to the communities involved, the action seemed part of the ominous wave that analysts predicted would follow GM's recent plant-closing announcement.

Ironically, the recent layoffs involve the high-tech plants that produce GM's luxury cars — the same plants GM says are replacements for the doomed older facilities.

GM plans to lay off 1,000 employees at its Orion Township, Mich., plant beginning Jan. 5, cutting production 12 percent. The plant assembles Cadillac DeVille, Fleetwood sedan and Oldsmobile 98 Regency.

Another 1,000 workers will be laid off Jan. 5 at GM's Wentzville, Mo., plant, cutting production 12 percent. It assembles Buick Electra and Fark Avenue and Oldsmobile 98 and Delta 88 models.

The second shift at Detroit-Hamtramck will be shut down Feb. 2, affecting 2,500 workers and cutting production in half. The plant assembles the Oldsmobile Toronado, Buick Riviera and Cadillac Eldorado and Seville.

A GM spokesman said it was reasonable to assume that slowdowns at its assembly plants will eventually mean layoffs at its component operations.

UAW Vice President Donald F. Ephlin, head of the union's GM Department, said of the 4,500 layoffs that GM's "shocking announcement is further evidence of the deepening crisis facing GM and its employees."

He said he hoped that GM's top management and board of directors would "devote as much attention and concern" to the laid-off workers and their families as they did to the "internal management problem" involving H. Ross Perot.

Ephlin also said that — since GM's 1986 profits are expected to be lower than 1985's — the union anticipates little or no profit-sharing payout for this year. That is particularly galling to workers who gave up traditional fixed wage increases in 1984 in exchange for a profit-sharing program.

The new layoffs came on the heels of GM's domestic-car sales plunge in November of 13.1 percent from a year ago. They seem tied to GM's plans to close nine plants and parts of two others permanently over the next three years, eliminating 29,000 jobs.

Doug Ross, Michigan Department of Commerce director, said the permanent closing of the older plants — though a blow to many communities — had been anticipated. He called the cutbacks at new plants "distressing."

But GM said the production cutbacks at its luxury-car plants are an alternative to expensive incentive programs. GM's 2.9 percent financing incentives last summer are blamed for part of its $338.5 million third-quarter operating loss.

Auto analyst Arvid Jouppi said GM's recent layoffs are not related to its planned plant closings.

Bricklin named importer of Malaysia's Proton Saga

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The man who introduced the Yugoslavian-built Yugo to the United States will do the same with Malaysia's Proton Saga.

Proton America Inc., a newly created subsidiary of Malcolm Bricklin's Bricklin Industries, was named the exclusive U.S. importer last week. A letter of intent was signed between Proton, Bricklin Industries and Proton America Dec. 3 in Kuala Lampur.

The new subsidiary is planning to import between 80,000 and 100,-

Audi fights bad publicity on runaway cars

By Dave Zoia
AUTOMOTIVE NEWS STAFF REPORTER

For the first time, Audi of America is going on the offensive to counter negative publicity surrounding its flagship model, the 5000-S.

Rocked by reports of unintended acceleration in the 5000-S, Audi has vowed to "do whatever it takes" to offset the bad press that has contributed to a 15 percent decline in U.S. sales during the past year.

Last week, the importer launched an aggressive national advertising campaign to dispel conclusions drawn by CBS News' "60 Minutes" in a scathing report on Audi and the 5000-S. The report was broadcast last month.

"We've started running ads and we've written a number of letters to dealers and owners attempting not only to counteract the ("60 Minutes") report, but really more to educate (consumers) as to the issue and assure them we are building safe cars," said John B. Damoose, newly named vice president in charge of Audi of America. "We plan to continue that as long as necessary.

"We've spent about $1 million," he told Automotive News last week. "But we will go substantially beyond that if that's what it takes to educate the world to the fact that we are stepping up to this problem."

The ads, which ran in The Wall Street Journal, USA Today and 100 newspapers in 33 major U.S. markets, claim that "60 Minutes" looked for an "easy answer" to the complex problem of unintended acceleration and made Audi appear the "villian."

The ads note that unintended acceleration is an industry crisis and that other makes of cars, including Nissan, Ford, Toyota, General Motors, Volvo, Honda, American Motors/Renault and Mercedes-Benz, have been investigated by NHTSA for the same problem.

The ads also cite Audi's automatic shift lock, which requires that the brake be engaged before the car can be shifted out of park, as proof the company is "looking for solutions" to the unintended-acceleration problem.

In a letter to "60 Minutes," Damoose said the program's contention that the shift lock mechanism may be ineffective was "tragic." It "may have convinced thousands of Audi owners not to have this safety device installed," Damoose wrote.

In another letter, Damoose urged Audi 5000 owners to have the shift lock installed. But so far, the mechanism has been put on only 36,000 of the 250,000 1978-86 automatic transmission-equipped Audi 5000s on U.S. roads.

Audi also has taken the campaign directly into dealer showrooms, providing potential customers with booklets explaining the company's position on unintended acceleration.

By the end of the month, the importer will unveil the "Audi Advantage," a new series of programs designed to provide more extensive "cradle to grave" service for Audi customers.

Audi's decision to face the sudden acceleration problem head-on in its advertising and letter campaign represents a departure from past policy and is the first visible effect of Damoose's input at the division. Damoose came to Audi just three weeks ago from Dodge, where he was general marketing manager.

"I took this job because I believe there is a real opportunity for this franchise in this country," Damoose said. "I'll tell you what, I wouldn't have taken it if I didn't think so."

The next step for Audi is to wait for the results of NHTSA's investigation, which company officials think will exonerate the 5000-S. The safety agency is expected to conclude its report within the next few weeks.

But Audi's big chance to rebuild will come next fall, when it introduces a replacement for the 4000 model, already achieving success in Europe as the Audi 80.

"That car will enhance our sales substantially," Damoose said. "We're certainly looking forward to a big introduction in this country."

Even before the 4000 replacement debuts, Audi will try to establish itself as a leader in automotive technology. The image development is critical to Audi's future, Damoose believes, because additional luxury car entries on the way to the United States from Japan will intensify competition in Audi's market sector.

When the smoke clears, Audi hopes to reemerge as a serious contender in the U.S. market for luxury/performance sedans. The firm predicts it could post annual sales volumes approaching 100,000 units within the next three to five years.

Indiana wins Fuji-Isuzu plant; workers to decide unionization

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

LAFAYETTE, Ind. — Fuji Heavy Industries, maker of Subaru cars, and Isuzu Motors will build their $500 million assembly plant for cars and trucks on an 869-acre site in central Indiana, 66 miles north of Indianapolis.

The Lafayette plant, scheduled for completion in late 1989, is to produce 120,000 units annually, 60,000 by each company. Groundbreaking is scheduled for next spring. Eventual capacity is to be 240,000 units per year.

The plant is scheduled to initially produce 1990-model Subaru sedans and station wagons and Isuzu Trooper sport-utility vehicles and P'up pickup trucks.

John E. Reilly, senior vice president and general manager of American Isuzu Motor Co., said, "By 1990, there is a definite possibility we will be producing new models there."

State, local and federal funding will amount to $86 million, accord-

L-M trims Merkur dealer ranks

Division tries to strengthen franchise as it awaits Scorpio

By Dave Zoia
AUTOMOTIVE NEWS STAFF REPORTER

Lincoln-Mercury Division is cutting back on the number of Merkur retail outlets, just as it prepares to add two new vehicles to its line of high-performance luxury cars.

So far, more than 50 of the 700 original Merkur franchises in the United States have been called back, Thomas J. Wagner, L-M general manager, told Automotive News last week.

"We've gone out and talked to the dealers who sold none or one or two last year and told them we would buy back their sign, parts and cars," Wagner said. "And we will continue to press the people who aren't giving the franchise its due, to resign.

"Will we ever reach the BMW total?" Wagner asked rhetorically, referring to the German makes dealer organization of about 430. "No, we'll never get that low.

"But we'll keep watching them. And the fact that we're out there and the dealers know that we've asked some to resign clearly says that we're trying to strengthen the franchise."

The cutback is due in part to the Merkur's disappointing sales. When Merkur franchises first were doled out in 1985, projections called for sales of 20,000 XR4ti models annually.

Wagner: "We will continue to press the people who aren't giving the franchise its due, to resign."

But actual retail deliveries of the import from Ford of Europe failed to reach 9,000 units in 1985. Less than 13,000 were sold through the first 10 months of 1986.

With the addition of two new Scorpio models to the Merkur line in April, the division is trying to ensure that the disappointing launch of the XR4ti is not repeated.

Ford is convinced it has succeeded in tailoring the Scorpio to meet demands of the American market, after delaying the car's introduction several months for modifications.

Efforts are being made to shore up the retail end as well, with L-M pressuring dealers to designate one or two sales and service people who know the product to handle all Merkur customers. As it is, Merkur buyers often are more knowledgeable about the car than salespeople, Wagner said.

Scorpio will be offered in two models, one priced around $20,000 and the top-of-the-line targeted at about $25,000, putting it in competition with such imports as the Audi 5000 and the Volvo 7 series. Profit margin is expected to equal that of the Lincoln Town Car.

About 8,000 Scorpios will be sold in the United States in the first year, Wagner said.

Addition of the Scorpio and the Mexican-built Mercury Tracer means imports could account for about 20 percent of L-Mercury sales in the United States in five years, Wagner said.

The Mazda-designed Tracer will retail for about $8,000 when it debuts in the spring as a two-door and four-door hatchback. A station wagon will be added in the fall of 1987. Sales are forecast at 50,000 units for the first 12 months.

The Tracer is built at Ford's Hermosillo, Mexico, plant. Content is 30 percent Mexican, 60 percent Japanese and 10 percent American. Tracer also is being built in Taiwan for the Canadian market.

GM line of succession: Some too young, some too old

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

Howard H. Kehrl will retire Dec. 31 as vice chairman of General Motors, and the people who watch the industry's personnel gyrations have a whole bagful of possibilities for GM to consider in picking the next occupant of that post.

Kehrl

GM said Kehrl will not be replaced, and that simply added to the speculation. The vacancy is likely to be only temporary, although it may not be filled until next summer.

GM President F. James McDonald will be 65 next Aug. 3 and will retire at the end of August. There are two — perhaps three — prime candidates for that job. The ones who miss out on the presidency may be offered the post of vice chairman.

The three are Donald J. Atwood, 62; Robert C. Stempel, 53; and Lloyd E. Reuss, 50. All are executive vice presidents.

By GM standards, Stempel and Reuss are rather young for the presidency. That makes Atwood a possibility, although he has no car division or overseas experience. Also, he could serve only two years. But those two years would bring Stempel and Reuss closer to the age that GM seems to prefer when electing a president.

So who will be vice chairman? If Stempel becomes president, Reuss might be named vice chairman. If Reuss is annointed, Stempel might get the runnerup job. If Atwood climbs to the top, there could be two vice chairmen.

Two vice chairmen would not be a trailblazing move. GM did it in 1974 when Richard L. Terrell and Oscar A. Lundin were picked — Terrell because he lost the presidency to Elliott M. Estes and Lundin as a fitting reward for a highly esteemed 63-year-old executive.

Kehrl is six months younger than McDonald. His early retirement gives GM a chance to fill both jobs at once.

see KEHRL, page 65

Correction

Two sentences were inadvertantly printed incorectly in the Delco strike settlement story on Page 54 of the Dec. 1 issue of Automotive News.

UAW official Len Wozny should have been quoted as saying the threat of a strike is now an even more important tool for the union than a strike itself.

Jake Smith, a UAW official at a Ford plant, added that a recent announcement that Ford is spending $171 million to boost production through automation at its Rawsonville and Ypsilanti, Mich., plants will result in a loss of about 200 jobs.

Denver Auto Auction builds new quarters

AURORA, Colo. — Ground has been broken here for the new quarters of the Denver Auto Auction. The facility, scheduled to open in July 1987, is being built on a 50-acre site.

Denver Auto Auction has been at its present location for 35 years. Expansion plans were announced when the auction was purchased by General Electric Credit Corp. a year ago.

General Electric Credit has auto auction facilities in four cities: San Francisco; Seattle; Harrisonburg, Va.; and Denver. The company said it plans to expand to 20 auction locations within the next three years.

Fiat sales in Europe climb 20%

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Fiat Auto's passenger-car sales in Europe climbed nearly 20 percent during October, by far the largest year-to-year increase among European companies.

Through the first 10 months of this year, only Japanese automakers have recorded European sales gains bigger than Fiat's 11.3 percent improvement over 1985, according to industry estimates compiled by Automotive News.

If Alfa Romeo, Fiat's new acquisition, were included, Fiat Auto's 10-month sales were within half a percentage point of Volkswagen Group, the market leader.

New-car sales in Europe totaled 9,996,000 for the first 10 months, up 8.5 percent over the same period last year. The market is expected to finish at 11.4-11.5 million units, surpassing the record 10.6 million cars sold in 1985.

VW Group clung to its sales lead in October, followed by Fiat Auto and Ford. Peugeot S.A. moved into fourth place ahead of General Motors.

Renault was sixth, and Mercedes-Benz edged ahead of Austin Rover for seventh place.

While the industry was up 7.5 percent in October compared with the year-ago month, Fiat Auto's sales increased 19.6 percent. The Italian company's European sales totalled 130,900, up from 109,500 in October 1985.

Fiat's 10-month market share was at 12.6 percent. With Alfa Romeo included, Fiat's share was 14.1 percent, compared to 14.5 percent for Volkswagen, Audi and Seat under the VW Group umbrella.

Fiat improved its position in two key markets during October — climbing 36.4 percent in France and 26.4 percent in West Germany. It did well in the Italian home market, where sales were 16 percent ahead of October 1985, and it gained strength in several smaller markets, including Spain, the Netherlands, Belgium-Luxembourg, Portugal and Ireland.

While Fiat surged in October, Japanese makers also continued to gain strength, increasing combined sales 16.7 percent during the month. Together, the Japanese held 12 percent of Europe's 10-month new-car market, up from 10.8 percent at the same time last year.

Nissan led the way in October, improving sales by 27.3 percent to 33,000. For the year, Nissan was up 14.4 percent with volume of 307,300. Toyota sales rose 16.8 percent in October to 28,700, and Toyota up 25.1 percent for the year with 297,000.

Volkswagen-Audi-Seat sales increased 3.4 percent in October. For the year, the group was 9.7 percent ahead of its 1985 pace with total volume of 1,440,000.

Third-place Ford increased sales 6.3 percent in October. Through the first 10 months, it sold 1,170,100 cars, a gain of 6.8 percent.

PSA edged past GM into fourth place during the month. The French group sold 1,116,700 cars in the first 10 months, compared to GM's 1,110,800. PSA was up 7.8 percent for the year, and GM was up 5.4 percent.

Renault remains in sixth and last place among volume producers, with sales of 1,012,300, up 4.2 percent over 1985.

Mercedes-Benz grabbed seventh place from Austin Rover in October. While the British firm's sales were plunging 13.9 percent during the month, Mercedes' were up 9.4 percent.

For the year, Mercedes' sales stood at 373,700, up 8.8 percent. Austin Rover, at 363,000, was down 3 percent for the year.

Deliveries up 2.5% for November

Imports set record; domestics barely exceed 1985 total

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Combined domestic and import new-car sales in the United States in November totaled 782,621, a 2.5 percent increase over the 763,304 units sold in November 1985.

That marginal increase came despite one less selling day in November this year. Last month, the industry sold an average of 32,609 new cars on each of the 24 selling days, a 6.8 percent increase over the November 1985 daily selling rate of 30,532.

The increase also came despite a lack of industrywide incentives. Only a smattering of models were covered by incentives, and those programs started at the beginning of the final selling period of the month.

There was a definite, measurable shift in segmentation from October.

The subcompact and standard-size segments increased last month at the expense of compact, intermediate and luxury models.

The industry's gain was largely the result of a record November total of 263,822 new-car deliveries by the imports. The total was 6.6 percent above the old record of 247,502 sold in November 1985.

Where the market was November, 1986

	Total Sales	Pct. of Total
SUBCOMPACT	120,777	15.43%
COMPACT	90,448	11.56%
INTERMEDIATE	179,165	22.89%
STANDARD	68,939	8.81%
LUXURY	59,470	7.60%
IMPORT	263,822	33.71%
TOTAL	782,621	100.00%

Domestic new-car sales for November totalled 518,799, up just 0.6 percent from the 515,802 units delivered the same month last year.

The month ended on a low point for the domestic makes. Their sales total in the final 10 days of November fell 8.8 percent to 168,335 from 184,506 in the Nov. 21-30 period last year.

The year-to-year decline was led by General Motors. GM sales in the final 10 days were off 28.4 percent, which put its monthly total down 13.1 percent. GM's 11-month new-car sales total fell 2.1 percent below the comparable 1985 year-to-date tally.

Every GM car division reported a year-to-year sales decline in the final selling period of the month, although Cadillac was up marginally for the entire month.

Particularly hard hit were the Cadillac Eldorado-Buick Riviera-Oldsmobile Toronado and Olds 98-Buick Electra models. Lagging sales of those models prompted the announcement last week of layoffs at the plants which produce those cars.

Among the other domestic makes, only American Motors, off 50.2 percent, and Volkswagen down 19.8 percent, reported year-to-year sales declines in November.

Honda reported that sales of its U.S.-built models rose 169.6 percent in November.

Ford Motor Co. sales were up 18.9 percent, although sales of Ford Escort and Mercury Lynx, the subjects of an annual percentage rate finance incentive that began Nov. 20, remained below year-ago levels in both the final period of the month and for all of November.

Chrysler Motors sales were up 4.9 percent for the month and retail deliveries of Nissan's domestically produced models rose 15.7 percent.

Although the imported makes posted a record sales total for the month, the new benchmark was largely the result of new entries.

The November 1986 sales total was bolstered by the addition of Acura and Hyundai models that were not sold in the United States last November.

Also, Yugo was still in the start-up stage of its U.S. sales operation at this time last year.

Still, the imports' record showing boosted their market penetration to 33.7 percent for the month, compared to 32.4 percent last November.

For the first 11 months of 1986, the import penetration was 27.9 percent, compared with 25.2 percent in the 1985 11-month period.

The imports also had a mixed bag of monthly winners and losers. Makes with year-to-year sales declines included Audi, Chevrolet Spectrum, Chevrolet Sprint, Dodge Colt, Maserati Biturbo, Mazda, Merkur, Nissan, Plymouth Colt, Porsche, Renault, Subaru and Volkswagen.

Sales of imported Honda models also declined during the month, but the company said that with the inclusion of Acura sales and the retail deliveries of U.S.-built models, American Honda had a record month.

Gifts for the car that has everything

LOS ANGELES — Car accessories from somewhere beyond the ordinary are featured in the Beverly Hills Motoring Accessories Holiday Gift Book.

For the car that you thought had everything, how about a silk cover with embroidered monogram or logo for $800? There is also a set of mink floor mats for $7,000 and a solid gold license plate frame for $20,000. And the ultimate: driving lessons from 1985 Indy 500 winner Danny Sullivan for $30,000.

November output at 4-year low

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

November's domestic auto production took a beating. The total was the lowest for the month in four years.

The Thanksgiving holiday, inventory adjustment and a strike reduced the month's output to 589,253, the lowest for November since the 404,542 completed in 1982.

Last month's total was 19.67 percent below October's 733,499 and 11.80 percent below the year-ago month's 668,083.

Automakers' targeted production of 157,968 units last week, more than double the previous week's 76,736, which reflected the Delco Electronics Corp. strike and the Thanksgiving holiday.

The week's build was 16.45 percent below the year-ago week's 189,068.

So far this year, 7,307,873 cars have been assembled, 5.14 percent below last year's 7,704,124.

Last week's scheduled output was split as follows: General Motors, 51.31 percent; Ford Motor Co., 25.70 percent; Chrysler Motors, 15.07 percent; Honda of America Manufacturing Inc., 3.41 percent; New United Motor Manufacturing Inc., 2.66 percent; and Nissan Motor Manufacturing Co., 1.85 percent.

Volkswagen of America's plant in Westmoreland, Pa., was idle last week because of parts shortages. The plant is scheduled to resume production today (Dec. 8).

American Motors' Kenosha, Wis., plant was idle last week for inventory adjustment. The plant resumed output today.

The last of the GM car assembly plants shut down by the Delco Electronics strike resumed output today. They are: Van Nuys, Calif.; Leeds, Mo.; and Norwood, Ohio.

GM closed its Arlington, Texas, plant today until Feb. 2 for installation of paint equipment. The shutdown affects 1,630 workers.

Saturday (Dec. 6) overtime was slated at GM's plant in Lake Orion, Mich.

Ford scheduled Saturday overtime at its Kansas City, Mo.; Wixom, Mich.; and Dearborn, Mich., plants.

Truck production slips for month

U.S. truck production during November totaled 254,380, the lowest for that month since 1983 when 235,497 units were built.

Last month's output was 20.27 percent below October's 319,066 and 12.72 percent below the year-ago month's 291,446.

Scheduled truck production of 70,444 units last week was more than double the previous week's 32,582 but was 12.74 percent below the year-ago week's 80,731.

The prior week's build reflected the Thanksgiving holiday and the Delco Electronics Corp. strike. The strike trimmed General Motors' output.

Year-to-date, 3,300,319 trucks have been assembled, 1.43 percent more than the 3,253,785 completed last year at this time.

GM slated Saturday (Dec. 6) at the following plants: St. Louis; Pontiac, Mich.; and Flint, Mich. (No. 1).

Saturday overtime was scheduled at Ford Motor Co.'s Kansas City, Mo.; Lorain, Ohio; and Louisville, Ky., plants.

Canadian truck build tumbles

Canadian truck production of 48,746 in November was the lowest for any month since July 1984 when 42,625 units were built.

Last month's output was also the lowest for November since 1982 when 26,018 trucks were assembled.

The November build was 7.57 percent below October's 52,739 and 39.25 percent below the year-ago month's 80,245.

Last week's targeted truck output totaled 14,139, 6.01 percent more than the previous week's 13,337 but 26.57 percent below the year-ago week's 19,256.

Year-to-date, 737,628 trucks have been built, 8.67 percent below the 807,686 completed last year at this time.

Automakers assembled 96,366 cars in November, 10.53 percent below October's 107,705 and 7.47 percent below the year-ago month's 104,148.

Scheduled auto production last week totaled 24,047, 10.15 percent more than the previous week's 21,831 and 6.96 percent less than the year-ago week's 25,847.

So far this year, 996,930 cars have been assembled, 3.64 percent below the 1,034,567 completed last year at this point.

Import surge seen for '87 inside Japan

TOKYO — Yanase and Co., Japan's leading automobile importer, has raised its imported-car sales target 31.3 percent for its 1987 fiscal year. The goal is 42,000 units, compared with 31,991 sold in the previous business year ended in September.

In a separate but related development, Daimler-Benz, of West Germany, said it will expand its Japanese Mercedes-Benz product line in an effort to capture a greater share of the domestic market.

Yanase said it based its ambitious sales goal on the belief that the environment for the import-car market will continue to be favorable because of the yen's high value.

The company said it expects double-digit growth in the total import market to continue into the first half of the 1987 calendar year, which could push imports to an annual volume of 70,000 units. Import sales of all cars in calendar 1986 are expected to exceed 60,000 units.

As additional factors in the projected sales rise, Yanase cited the narrowing price differential between imported cars and Japanese luxury cars and the Japanese government's simplification of import certification procedures.

By make, Yanase projects 20,000 sales for Volkswagen (up 31.4 percent over the total for the previous fiscal year), 10,000 Audis (up 46.2 percent), 10,000 Mercedes-Benz models (up 18.6 percent) and 2,000 General Motors models (up 33.5 percent).

In addition, the company said it expects to sell 1,100 Isuzu Piazzas, an increase of 22.2 percent over last year, and 1,300 Nissan-built VW Santanas, up 15.4 percent.

According to Daimler-Benz, its first special models for the Japanese market will be lower-priced and luxury versions of the 190-E. They will be introduced in January. The base 190-E, with less standard equipment and fewer frills, will cost about $27,000 at an exchange rate of 160 yen to the dollar, compared with the standard 190-E at $30,000. The luxury model will be priced at $34,000.

Although virtually all Mercedes-Benz cars sold in Japan have been imported with left-hand-drive, the new models will be right-hand drive like Japanese cars.

AMC bares product plan of early '90s

By Laura Clark and Dave Zola
AUTOMOTIVE NEWS STAFF REPORTERS

American Motors is eyeing two new vehicles for 1992 or thereabouts — an upscale compact passenger van and a small, entry-level Jeep to compete with imports from Japan.

The two new-vehicle proposals are part of a larger AMC-Renault five-year product plan to be sorted out by the companies in the next few months.

That plan also includes importing a four-wheel-drive Medallion in 1989, development of a Premier replacement in 1993-94 and a redesign of the XJ (Cherokee, Wagoneer, Comanche) line of Jeeps in 1989.

Still open to debate is whether to import a replacement for Alliance or abandon that small-car market segment.

Alliance is scheduled to be dropped after the 1988 model year.

The proposed small Jeep development program, code-named J-90, might even result in the construction of a new low-volume, technologically advanced North American assembly plant, James R. Murphy, AMC director of product planning told Automotive News.

AMC and Renault executives are trying to decide which new vehicle programs to pursue. They are also wrestling with the question of whether AMC or Renault should take the lead with large-car and van programs.

The two companies agree AMC has the resources and experience to handle all Jeep vehicle development, while Renault's expertise lies in small-car design.

But large-car and van programs fall into a gray area where neither firm rates as the obvious choice. Ideally, each company would like to do its own products to ensure the vehicles appeal to the home market. But AMC and Renault officials realize that isn't efficient, so it is imperative that they quickly make the decision on who does what.

AMC is counting on profits from the Premier — an intermediate going into production in Canada — and XJ models to fund future products, according to Murphy.

The J-90 utility vehicle could be available by the 1992 model year, according to an internal AMC product planning document obtained by Automotive News. The vehicle would be in the size class of the Suzuki Samurai and priced in the $6,000 to $7,000 range.

AMC said it is considering producing the J-90 in the United States if the program gets the go-ahead. New production techniques would allow the automaker to construct an assembly plant for a relatively small investment and build

Auto dealers stung on travel certificates

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Dozens of dealers from Minnesota to Georgia and from Colorado to New York have been stung for hundreds of thousands of dollars by vendors selling unredeemable travel-accommodation certificates for use in retail promotions.

More than a dozen such vendor-firms have been identified by consumer protection units in the attorneys general offices in Texas and Florida, where many of the travel certificate companies are located.

Authorities report a recent growth in the number of consumer complaints regarding unredeemable certificates, many of them tied to auto dealership promotions.

Officials from a number of states are investigating — and taking civil action against — companies that sell the certificates.

"The poor car dealer is the real sucker in these scams," said Kay O'Toole, consumer investigator in the Houston office of the Texas attorney general.

"They are taking a chance with their customer relations if they purchase these certificates," said O'Toole.

The dealer who falls prey to the bogus travel incentive promotions has much to lose.

He loses the $100 to $150 he paid for each

1st quarter output cuts seen for GM

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

General Motors, on the heels of production cuts in the last quarter of this year and first quarter of next, will have to cut early-1987 production even more or offer incentives to reduce its high car stocks.

Analysts say GM's announced January-March 1987 production cutback of 3.31 percent or about 40,000 units will not be enough to bring its production into line with the 100-plus days supply GM is expected to have in January. GM sales have been off about 25 percent for most of the 1987 model year, although overall sales have been near last year's pace.

FIRST QUARTER AUTO PRODUCTION
1987 forecast vs. 1986 actual

	1987	1986	% change
GM	1,122,851	1,161,300	– 3.31
Ford ...	505,000	446,505	+13.10
Chrysler	303,000	373,481	–18.87
AMC ...	9,500	12,553	–24.32
Honda .	87,789	45,114	+94.59
NUMMI	50,000	46,428	+ 7.69
Nissan .	37,632	21,517	+74.89
VW	27,200	21,169	+28.48
Industry	2,142,972	2,128,067	+ 0.70

"First quarter production will be significantly lower than what the makers are saying and most of the reduction will come from GM schedules," said John Hammond, auto analyst

Japan's market to rise, but how far?

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Reflecting an uncertain economy and fluctuating yen, automotive analysts in Tokyo offer mixed outlooks for Japan's domestic vehicle market in the 1987 fiscal year and the remainder of the 1986 business year.

Depending on the analyst, bank or auto company making the forecast, sales projections for the next fiscal year (April 1987-March 1988) range from an increase of 0.1 percent to 2.8 percent. Forecasts for the 1986 business period (April 1986-March 1987) range from a gain of 1.3 percent to 3.0 percent.

The most bullish domestic sales forecast comes from Y. Kondo, senior analyst in the research department of Daiwa Securities Co., Tokyo. According to Kondo, sales of cars, trucks and buses in Japan for the 1986 business year will total 5.74 million units, an increase

Porsche looks for new brand to sell in U.S.

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

RENO, Nev. — Porsche Cars North America is looking for foreign automakers who would like to sell their own-branded cars through Porsche's dealers.

Porsche is offering a network of 322 dealers help in obtaining federal certification, marketing services, plus engine and suspension technology, engineering and "refinement" services from West German parent company Porsche AG.

In return, Porsche would boost the potential profitability of its dealers by increasing their volume and flesh out its sports-car lineup with compatible vehicles without the risk or expense of developing them. It could also help Porsche establish dealers in small markets where an independent Porsche store could not survive.

"We want to be a full-service transportation company," John A. Cook, president of Porsche Cars North America, said in an interview with Automotive News.

"We are looking for one or more companies that can provide 20,000 to 70,000 vehicles a year that are compatible with Porsche's image and that complement our lineup,"

EDS-GM: More lawsuits, explanations

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

To no one's surprise, the aftershocks of General Motors' $700 million buyout of ousted board member H. Ross Perot were still being felt last week.

Holders of GM's Class E shares filed two more lawsuits challenging the deal. The complaints echoed an earlier suit that contended GM was throwing away its money and undermining the value of Electronic Data Systems stock by paying twice the market value for Perot's 12 million shares.

Meanwhile, GM and EDS officials made gestures of unity in apparent attempts to put the controversy behind them.

In a joint appearance before the Economic Club of Detroit (Dec. 8), Perot and GM Chairman Roger Smith treated each other with gentlemanly respect. That no doubt surprised those among the record crowd of 7,124 who expected recent public sparring between the two to continue on the rostrum. Later in the week, EDS issued a statement reaffirming its role as an independent company committed to supporting GM.

While Perot's speech made no specific reference to GM, the former EDS chairman didn't shy from talking about his differences with GM at a news conference. He said he made his criticism public because, as the company's largest shareholder, he felt obligated to speak out for change.

There's something wrong when GM, with all its size and its resources, has become the domestic industry's high-cost producer and will make less money than Ford Motor Co. this year, Perot said.

"We're spending $3.6 billion a year on R&D," he said. "We ought to have a car that can ice skate."

Perot revealed that his plans to vote against executive bonuses caused a commotion on the GM board. Citing his "feed the troops first" belief, he said that special treatment for officers is uncalled for at a time when GM was closing plants and laying off workers.

Another "stress point," Perot said, was EDS's inability to get contracts signed for the services it provides GM, its largest customer.

EDS shareholders were promised the contracts when the two companies merged in 1984, Perot said. Because GM Class E stock dividends are based on EDS earnings, the lack of contracts hurt profits and also posed a "securities law problem," he said.

In the meantime, GM was pressing Perot to have its own auditors review EDS, said Perot. He said he agreed to the audit in exchange for a meeting before the board's fairness committee at the December board session to discuss the contracts.

But Perot wasn't allowed to come to that Dec. 1 meeting, he said. That's where the board voted on the buyout — an idea that Perot said he had proposed in June, but stressed at the time he thought would be unwise.

For his part, Smith told reporters that he still considered Perot a friend and that the troubles stemmed from their different approaches on how to get things done. History will someday say that the EDS purchase is working, he said. It will also prove the buyout to be "one of the best investments GM ever made."

Some shareholders apparently disagree. Two more lawsuits have been filed protesting the deal — one in New York Supreme Court and the other in Delaware chancery court.

In the New York suit, one of EDS's cofounders, Milledge A. Hart III, charged that the buyout was a waste of corporate assets and represented a breach of GM directors' fiduciary duty. In Delaware, five shareholders from New York and an Illinois company, Drexel Home Inc., sought, among other things, to rescind the buyout.

Those suits, and an earlier complaint filed in federal court in Detroit, are derivative suits, meaning they've been filed against the directors on behalf of the corporation. A GM spokesman said the company is still reviewing the suits and couldn't comment.

In the EDS statement, president and new chief executive Lester Alberthal Jr. said EDS intends to continue supporting GM while increasing business outside the automaker by 20 percent annually.

Those objectives were worked out with GM Executive Vice President Donald J. Atwood after the Dec. 1 buyout of Perot and three other EDS executives.

Bill would halt use of shareholders as 'pawns'

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Angered by General Motors' decision to pay $700 million in "hushmail" to Ross Perot, Senator Howard M. Metzenbaum, D-Ohio, will introduce a bill in the new Congress to "require that any deal offered to one shareholder will be offered to all."

Metzenbaum said the bill would prohibit what he calls "greenmail," which treats shareholders "as pawns in the battle for boardroom control."

Greenmail is "when corporate management buys off unwelcome investors or raiders at a substantial premium not available to the average investor," Metzenbaum said.

Although GM's payments to Perot are not technically "greenmail" — because Perot apparently was not interested in a takeover of GM — Metzenbaum said the decision by the GM board to buy out Perot's holdings amounted to the same thing because "Ross Perot is about to be paid $700 million in what he himself calls 'hushmail.' "

"I don't fault Perot for selling out for double the market value of his stock, but I seriously question the propriety of GM management using shareholders' money to get rid of him," the senator said.

"In fact, the rest of the shareholders often see the value of their investment eroded as the stock prices fall once the greenmail is paid," according to Metzenbaum.

The senator said, "Shareholders need to know they have a fair shot at success on Wall Street. If they see that they are pawns in the battle for boardroom control, they will abandon the market to the professionals and the institution of publicly owned corporations will crumble."

GM, Volvo sign pact for heavy truck company

DETROIT — General Motors Chairman Roger Smith and AB Volvo Chairman Pehr G. Gyllenhammar signed a agreement forming a joint venture effective Jan. 1, 1987, to develop, produce and market heavy-duty (Class 8) trucks for distribution in North America.

Volvo GM Heavy Truck Corp. will be headquartered in Greensboro, N.C., and Volvo GM Canada Heavy Truck Corp. in Toronto.

Volvo currently has 76 percent ownership, with GM still retaining the option to raise its stake from a current 24 percent to 35 percent.

The joint venture firms will now focus on electing boards ofdirectors and working out specifics, such as what products they will offer in the future.

GMC will continue to build and market its heavy trucks during 1987, with August 1988 as the current phaseout target for manufacturing which will be moved to Volvo's three U.S. plants.

Gyllenhammar, left, and Smith sign to form Volvo GM Heavy Truck Corp.

Olds follows lead, realigns field, opens up dealer communication

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

LANSING, Mich. — Oldsmobile Division will restructure its field sales and service operations beginning early next year, cutting the number of zones from 27 to 19 by fall and opening a computer dealer assistance center.

Oldsmobile's moves are similar to those that have taken place at the other General Motors divisions in recent months. The revampings are designed to put the divisions closer to the dealers and marketplace as well as to reduce the employee headcount. GM plans to cut its salaried workforce 25 percent by 1989.

Oldsmobile said its restructuring will enable the division to strengthen support to its 3,300 dealers and to increase regional marketing efforts.

Oldsmobile General Sales and Service Manager David E. Lahti said greater efficiency and sales effectiveness will be gained by having larger, more completely staffed zone offices.

Oldsmobile already has closed two zone offices. The Buffalo and Omaha zones are now being consolidated into other zones.

The Oklahoma City, Cleveland, Indianapolis, Houston, Milwaukee and Portland, Ore., zone offices will halt operations by the end of August.

Operations of the Atlanta and Los Angeles regions will be merged with those in Tarrytown, N.Y., Detroit, Chicago and Dallas.

Dealers in the Portland zone will be served by the San Francisco office. Dealers in the Oklahoma City zone will be transferred to the Dallas zone.

Activities in the Cleveland zone will be split among the Pittsburgh or Detroit zones. Milwaukee dealers will be served by either the Chicago, Minneapolis or Kansas City zones. Houston dealer activities will be transferred to the Dallas zone. Operations from the Indianapolis zone will be assigned to either the Cincinnati, St. Louis or Detroit zone offices.

Lahti said the boundaries of the new zones are based on the market size and dealer needs.

Field support staff will be boosted by district managers for sales and district managers for service working as teams, Lahti said.

Larger dealers will receive attention from the division more in line with the volumes they sell. Smaller dealers, who received little or no contact from the division in the past, also will receive more attention under the new system, Oldsmobile said. The division will establish a dealer assistance center in Lansing, Mich., to provide more frequent contact — by telephone — with smaller dealers.

The center will provide quicker responses to dealer questions, Lahti said.

GM to replace tires on some models

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors has told dealers it will replace up to two tires free on selected vehicles because of excessive tread wear.

Although GM has not publicized the program, dealer bulletins obtained by the Washington-based Center for Auto Safety show GM is offering the free tires on 1985 Buick LeSabre and Riviera and 1985 and 1986 Century, Regal and LeSabre and Electra Estate Wagon. Replacement is offered only for models equipped with all-season radials on non-driving wheels during the first 12 months or 12,000 miles.

A similar free-tire-replacement program is in place for Cadillac's 1985 and 1986 Fleetwood Brougham and 1985 Eldorado and Seville; GMC's and Chevrolet's 1985-1986 M and G vans, C/K trucks and S/T trucks; and Chevrolet's 1985 and 1986 Caprice and Monte Carlo, according to GM service bulletins.

A Washington spokesman for GM said the fix was offered after GM found its original-equipment all-season tires, "extremely sensitive to misalignment."

The spokesman said "fewer than 50,000 tires have been replaced." He said GM told dealers about the problem in February, changed factory alignments, then began the replacement program in May.

Tires covered by the program include the Uniroyal Tiger Paw Plus, Goodyear Vector, Firestone Supreme, General Ameriway X7 and Michelin XZ4, GM said.

The problem was brought to the attention of the Center for Auto Safety by Maine Attorney General James E. Tierney. Tierney told the center in a letter dated Oct. 23, 1986, that a tire dealer in Portland, Maine, "which is the outlet for the tires used on General Motors cars, states it is receiving approximately 20 complaints a week concerning tire wear on front-wheel-drive GM cars."

The attorney general added, "Apparently, the tire warrantor will replace the tires, giving the consumer a discount based on the amount of tread lost due to the General Motors defect. However, consumers are sometimes being charged for the rebalancing and realignment."

INVENTORIES

Domestic stockpile rises, imports cut supply

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Stocks of new domestic cars in November continued to climb as they have since widespread incentives were dropped early in October.

For certain domestic models, stocks soared as sales tumbled dramatically.

By comparison, stronger sales of imported cars forced their days' supplies down slightly.

On Dec. 1, the days' supply of domestic cars was 71, up from 60 days on Nov. 1.

The ideal days' supply for domestic models is generally considered to be no more than 60 days.

As December opened, there were 1,531,295 new domestic cars in inventory at assembly plants, dealerships and in transit to dealerships. A month earlier, 1,412,637 cars were stockpiled.

Inventory levels climbed at all domestic manufacturers with the exceptions of Honda and Volkswagen.

American Motors had a 120-day supply on Dec. 1, up from 69 days a month earlier; General Motors stocks climbed to 84 days, up from 68; Chrysler Motors stocks rose to 75 days, up from 54; Ford Motor Co. stocks inched up from 56 days to 58; and Nissan domestic stocks climbed from 46 to 56 days.

Volkswagen supplies fell from 93 to 86 days and Honda stocks slipped from 11 to 5.

Two domestic car lines and 24 models reported stockpiles representing more than 100 days' worth of sales.

Renault had a 133 day supply at the start of December and Buick was stocked with a 102 days' worth.

GM had 15 models with supplies of more than 100 days; Chrysler had seven; AMC had one (Renault Alliance) and Ford had one (the discontinued Mercury Capri).

Companies shared the Dec. 1 domestic inventory as follows: GM, 58.45 percent; Ford, 23.12 percent; Chrysler, 14.60 percent; AMC, 1.26 percent; VW, 1.14 percent; Nissan, 1.05 percent; and Honda, 0.38 percent.

A month earlier, shares were: GM, 58.38 percent; Ford, 22.83 percent; Chrysler, 14.54 percent; AMC, 1.36 percent; VW, 1.30 percent; Nissan, 0.80 percent; and Honda, 0.79 percent.

Shares by market class on Dec. 1 were: intermediate, 33.31 percent; compact, 23.02 percent; subcompact, 19.37 percent; standard, 13.56 percent; and luxury, 10.74 percent.

Shares on Nov. 1 were: intermediate, 33.78 percent; compact, 22.16 percent; subcompact, 19.01 percent; standard, 13.41 percent; and luxury, 11.64 percent.

Although the number of imported cars in stock increased slightly in November, the days' supply fell from 42 days on Nov. 1 to 41 days on Dec. 1. One year earlier, the days' supply was 31.

December opened with an inventory of 455,303 cars, up from 425,608 on Nov. 1.

On Dec. 1, 1985, import cars numbered 304,079.

The number of new imported trucks on hand also rose while the days' supply fell — again due to an increased sales rate.

The number of new imported trucks in stock as December opened totaled 194,033, up from 186,825 on Nov. 1 and 103,138 on Dec. 1, 1985.

Truck inventories represented a 56-day supply on Dec. 1, down from 69 a month earlier and 41 a year earlier.

The combined car and truck stockpile on Dec. 1 totaled 649,336 vehicles, 6.03 percent above the 612,433 on Nov. 1 and 60.24 percent above the Dec. 1, 1985 total of 405,217 units.

Days' supply for cars and trucks combined was 45 on Dec. 1, compared with 48 a month earlier and 33 a year earlier.

On Dec. 1, import-car inventories were divided this way: Japan, 70.58 percent; West Germany, 18.47 percent; and other countries, 10.95 percent.

One month earlier, import-car inventories were divided: Japan, 71.40 percent; West Germany, 18.17 percent; and other countries, 10.43 percent.

Import inventory figures include dealer and port stocks and vehicles in transit.

By country of origin, the days-supply figures for imported cars were: Japan — Honda (imports only), 5; Toyota, 16; Acura, 25; Mazda, 45; Subaru, 50; Isuzu, 56; Nissan, 65; Mitsubishi, 81; Chrysler Motors, 113; and Chevrolet, 133 (including 124 for the Isuzu-built Spectrum and 148 for the Suzuki-built Sprint).

West Germany — Mercedes-Benz, 27; Porsche, 41; BMW, 57; Volkswagen (imports only), 91; Audi, 120; and Merkur, 163.

Other countries — Jaguar, 22; Hyundai, 23; Alfa Romeo, 34; Saab, 35; Yugo, 36; Volvo, 48; Peugeot, 62; and Renault (imports only), 92.

Days' supplies of light trucks were: Suzuki, 25; Toyota, 36; Mazda, 47; Chrysler imports, 55; Mitsubishi, 64; Isuzu, 88; and Nissan, 97. Nissan's domestic built models are included in the total.

WHAT HAPPENS WHEN YOUR CUSTOMERS FIND OUT THEY'RE LEAVING WITH LESS SUBARU THAN THEY CAME IN WITH?

We'd rather not find out.

There's a good reason why we at Subaru have been rated one of the highest in overall customer satisfaction.

It's because our customers trust Subaru and their Subaru dealers.

But a customer's trust can easily be shaken. All it might take is discovering he got something he wasn't expecting. A non-genuine Subaru part.

To insure customers receive genuine Subaru parts when they need them, we've set up a state of the art, fully automated parts distribution center in Southern California. This, coupled with 13 regional distributor warehouses and the Subaru Star Dealer Computer System, lets you locate genuine Subaru parts anywhere in the country.

After all, customers come to a Subaru dealer for Subaru quality. Don't you agree they shouldn't leave without it.

TRUCK INDUSTRY

Incentives call the tune in November

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

While General Motors and Ford Motor Co. concentrated on improving the per-unit profitability of the trucks they sell, Chrysler Motors and the imports began eating their competitors' lunches in November.

GM and Ford decided not to match Chrysler's low-interest financing programs, for example. They kicked off Nov. 21 with some telling effects on market shares.

An analysis of November light truck sales shows that Ford's share of the light-truck market dropped to 26.5 percent from 30.5 percent in like 1985, while Chevrolet's share dropped to 22.9 percent from 28.0 percent in like 1985.

GMC and Jeep also saw their market shares erode an identical 1.0 percentage point. Each captured 5.7 percent of the light truck market in November, compared to the 6.7 percent share each held in the like year-ago month.

Chrysler's share, meanwhile, increased to 16.4 percent from 10.9 percent a year earlier; the imports captured 22.9 percent of the light truck market compared to 17.2 percent last year.

A significant part of Chrysler's gains, of course, are due to new truck lines — the Dakota and Raider — which it began offering in the 1987 model year. But there's no discounting the impact of its low-interest financing programs which run through Jan. 20.

Meanwhile, the overall light-truck market softened slightly in November, with industrywide sales down 6.3 percent from last year's record-setting pace.

Light-duty truck manufacturers retailed 318,420 units in November compared to 339,766 in like 1985.

Industrywide light-truck sales of 4,187,197 for the first 11 months of calendar 1986, however, maintained a strong lead over last year's 4,039,101 for the comparable period, guaranteeing another calendar-year record in 1986.

Chrysler's November light-truck sales of 52,368 units were up 41.2 percent from a year ago.

The imports retailed 72,872 trucks, up 24.4 percent from November 1985.

All other manufacturers, including Jeep which previously had a long string of sales records. were off in the month.

Ford's sales of 83,815 light trucks in November were off 19.1 percent from a year earlier.

Eleven-month Ford light-truck sales of 1,208,096 were up 8.1 percent over like 1985.

Ford chalked up sales gains in its medium and heavy trucks during November, bringing its total monthly truck sales to 88,483, off 18.2 percent from like 1985.

Year-to-date, it retailed a total of 1,258,750 trucks, up 7.2 percent from last year.

Chevrolet retailed 73,017 light trucks in November, off 23.1 percent from last year.

Year-to-date, it retailed 1,135,435 light trucks, off from 1,174,217.

Chevrolet retailed a total of 74,176 trucks in November, off from 96,712 last year. Year-to-date, it retailed a total of 1,152,098 trucks, off from 1,193,547 last year.

Heady '87 forecast from GMC

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

GMC's 1987 model new-truck lineup closely resembles Chevrolet's, and GMC officials are predicting record sales for the 1987 calendar year.

GMC's sales projections, though, are beginning to look overly optimistic, particularly in view of its sales falloff in November.

John D. Rock, manager of GMC Truck & Coach, said he is looking for record industry sales of 4.9 million truck sales in calendar 1986 which would top the 4,758,530 sold in calendar 1985.

He anticipates more than 4.6 million light-duty truck sales industrywide, up from 4,470,641 in calendar 1985; 155,000 medium-duty sales, up from 152,113 in 1985; and 115,000 Class 8 heavy-duty trucks, off from 135,776 in 1985.

GMC's S-15 Club Coupe Pickup

He also predicted GMC will sell a record 362,000 trucks in the 1987 model year, topping the 353,286 sold in 1986.

Rock pointed to the division's record-breaking sales momentum, a strong product line that will be augmented by new full-sized pickups in spring, revitalized dealer organization and firm base of customer support to help it achieve its ambitious target.

Aside from record light-truck sales in model year 1986, GMC dealers sold over 32,000 medium duties, their best showing in a dozen years, Rock said.

He anticipates a similar medium-duty performance in the 1987 model year.

Strengthening GMC's confidence is another large order recently placed by Ryder Truck Rental. Production of about 5,000 Ryder medium-duties began in December at Pontiac. Another 1,200 medium duties will be built for Hertz-Penske, beginning in January.

GMC's light-duty trucks have the same engineering improvements as Chevrolet for 1987.

That includes electronic fuel injection in virtually all trucks up to 10,000 pounds, a new serpentine single belt accessory drive system and other performance improvements.

The 2.5-liter engine's output went from 92 to 98 hp, for example. The 4.3 liter V-6, with its new closed loop fuel injection and roller tappet camshaft, offers 160 hp, and ratings on the 5.0 liter increased from 160 to 170 hp.

The 5.7-liter engine is rated at 210 hp for most applications, up from 165 hp in the 1986 model year. It has 300 foot-pounds of torque at 2,800 rpm.

The 7.4-liter V-8 provides 230 hp at 3,600 rpm and 385 foot-pounds of torque at 1,600 rpm.

GMC's S-15 models feature several new interior treatments in uplevel trims. For example, color-keyed floor mats and sporty leather trim bucket seats are options for extended cab S-15 pickups and S-Jimmy models.

A new "Timberline" version of Jimmy will become available later in the model year. It is comparable to Chevrolet's "High Country" package on Blazer.

It features special paint, blending from black to gold, gold aluminum wheels and unique interior seats.

The compact Safari van, competing in a segment that accounted for more than 600,000 sales in the 1986 model year, also gets a new "Touring Package," tailored to style, comfort and appearance.

Outside, it has a unique two-tone paint scheme. Inside, it has upscale trim and front bucket seats that are wider and more plush than those previously available, and are closer to what a customizer might offer.

The back seats also offer a split bench seat option, with a center console. The rear seats have an adjustable full-width headrest and reclining back.

A seating configuration with four buckets will also be available in the Safari Touring Package, slated to debut in January.

A new trailering package increases Safari's towing capacity to 6,000 pounds.

The van also features a new roof luggage rack finished in satin black with adjustable tie-down bars and rubber roof protector strips.

A new sporty air dam and fog lamp package with improved aerodynamics will be available later in the year.

A new four-spoke steering wheel is available in several configurations — base vinyl wheel, soft custom wheel and sporty luxury wheel.

A new four-speed transmission is available for Safari cargo vans with the base four-cylinder engine. It provides quieter operation and smoother shifting.

The full-sized Rally passenger vans, Vandura cargo vans, full-sized pickups and Suburban are largely unchanged from last year.

The 6.2-liter diesel is available for Jimmy applications in all states except California.

GMC has also complemented its W4 Forward medium-duty imported truck with a higher GVW model. The Forward is available in 11,000 pounds GVW and, for 1987, with a 13,250-pound rating in all states except California.

Other standard features added for 1987 include radial tires and a newly designed grille.

The bigger W7 Forward is available with GVW ratings up to 33,000 pounds.

For 1987, there's a special tractor model in the W7HV series, the "heavy version" of the GMC Forward Line. It features a 60,000-pound gross combined vehicle weight rating for tractor-trailer applications.

New for 1987 is the availability of the 8.2-liter Detroit Diesel in naturally aspirated and turbocharged versions of GMC's medium duty Top Kick series.

U.S. post office order is high for Volvo White

GREENSBORO, N.C. — As part of its continuing efforts to expand and modernize its heavy-duty truck fleet, the U.S. post office has ordered 497 White Xpeditor low cabover tractors from Volvo White Truck Corp.

The order includes 348 single axle tractors and 149 tandem axle units. Cost of the trucks exceeds $20 million.

The order, single largest dealer order ever received by Volvo White, was placed with Weber White Trucks, a Volvo White dealer in Washington, D.C.

Weber White submitted bids for both the single and tandem axle groups, based on Post Office specifications for performance, durability and operating economy.

The Xpeditors will be used primarily to haul mail and parcel post between Post Office facilities within major metropolitan areas around the country.

SERVICE MANAGEMENT

How dealers sell service for winter

SHOP TALK

ARTHUR FLAX

Automotive News recently surveyed dealers to find out how they encourage customers to return for winter car preparation. Their methods ranged from those shops which rely solely on their reputations to those that use computerized mailing systems.

One of the respondents, Delaware Oldsmobile-Volvo-Saab, Wilmington, Del. has a particularly advanced computerized service system, according to Steve Gerkens, service director.

The 46-year-old dealership has in its service data base the names of its 20,000 Oldsmobile customers and 4,000 import-car customers. The computer is programmed to suggest maintenance procedures to customers, via postcard, based on the time and mileage interval since their last service visit.

The seasons also play a part in the type of service suggested. For example, cooling system service is automatically offered in the fall, air conditioning service in the spring.

The computer system at Delaware Olds has been in place since 1979 and has been continually updated.

Gerkens said he has watched the dealership switch from handwritten repair orders to computer-written tickets that tie into the computer's accounting system.

Not all of the updating went smoothly. He said an effort to program the computer to dispatch technicians to vehicles failed quickly.

Saab training

ORANGE, Conn. — Saab-Scania of America will open three more training centers in the United States to offer more accessible training to its dealers.

Until the first satellite training center recently opened in Dallas, Saab's training schools were in its regional offices. Similar satellite training centers are slated for Boston, Baltimore and for the New Haven area. This last center will replace a Saab training facility in West Haven, Conn.

Saab's other traditional training centers are in Schiller Park, Ill.; Torrance, Calif.; and Atlanta.

The new sites will give dealers in almost every major metropolitan area easy transportation to a Saab training center, field school or temporary vocational school facility, a spokesman said.

Ideal design? No, compromise

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The perfectly serviceable vehicle probably would have an engine bay large enough to fit a piano. All of the components and accessories — oil filter, alternator, spark plugs and such — would be neatly laid out and easily accessible.

The perfectly serviceable vehicle, however, is not practical. Engine and component space, cost and ease of assembly are just some of the trade-offs engineers must balance with serviceability when designing vehicles.

Service engineers work with design engineers from the start of a product's development cycle to minimize the trade-offs.

"There is a general contest for space, what goes where, ease of assembly and serviceability," said Donald R. Morgan, Ford Parts and Service Division supervisor of advanced service engineering.

"In assembly, sometimes it is easier to put large parts on the engine before it goes into the car. We hope they don't put something on that we can't reach without removing the engine. Sometimes we get surprised, but if we can see it on paper, it is easier to change than in hard metal."

A Ford engine project generally starts six years before introduction, according to Morgan. Vehicle design usually starts four years before introduction.

"We start when we see a new engine coming," Morgan said. "We list the serviceability requirements and also the service wants."

That list, he said, is some 10 pages long. A requirement might be that the water pump can be removed without removing the engine. A want might be for an oil filter that can be changed from above the engine.

Chrysler Motors engineers also design serviceability into a product from the start of the design cycle — about four years for a new engine and three to four years for a vehicle — according to Ray Bollman, manager of serviceability and technical service liasion.

Bollman said, "At Chrysler, serviceability is defined by certain statements in the product plan during the concept stage. In every case they address the cost of car ownership."

Automobiles, said Bollman, must be serviceable to the dealership mechanic, the independent shop mechanic and the do-it-yourself customer.

Service features that meet these goals, said Bollman, are designed in at the concept stage and "protected" from deviations through the development stage.

Service engineers meet with vehicle design engineers throughout the development stages of a project.

Chrysler rates its serviceability features on a one, two or three priority level. A level one priority is a must-have, and Bollman said he has never lost on a top priority request. Level two reflects a moderate need for a service feature, and level three is a "nice to have" feature, he said.

A cost trade-off, said Bollman, is never a consideration for a high-priority item. For example, he said, Chrysler would never "hide" an oil filter.

Although there is an occasional need for special tools which only work in certain situations, they are avoided if possible, according to the service engineers.

New types of fasteners may, however, replace traditional designs when they offer assembly or appearance advantages. For example, the "Torx" head screw developed by the Camcar Division of Textron, which features a star shaped indentation for a tool, is proving popular.

Designing a car to be serviceable is easier with a clean sheet of paper, but sometimes engineers have to make do with what is available.

Inside Chrysler's design center: Ray Bollman and the new V-6 in a minivan buck

Providing easily serviceable V-6 engine installations in both Ford and Chrysler minivans proved to be a challenge, according to Bollman and Morgan.

Chrysler recently adapted a Mitsubishi V-6 for 1987½ minivans. A little more engine compartment room would have made the job easier, Bollman said.

"On the Aerostar," Morgan said, "we should have left another inch or so of room. When this happens, we understand and quantify the situation and say we will never do it again. If we could do the Aerostar with a clean sheet, we would leave more room."

Auto companies test serviceabilty and access to components on design bucks, mock-ups of front-end sheetmetal and engine compartments.

Ford has three design rooms in which are numerous configurations of new-model front-ends.

Engines are placed in the bucks to see how they fit. When completed engines aren't available, engine blocks and mock-up parts are placed in the buck.

Morgan said 1988 models are in the final service design stage, 1989s are being studied carefully and 1990 bucks have engine blocks placed in a plastic model of the front end.

"After the sheet metal is available, we will replace the plastic, and when a metal manifold replaces the wood, we will use that," Morgan said.

Chrysler engineers follow a similar time schedule and practice, Bollman indicated.

Manufacturers are placing greater emphasis on engine compartment appearance than they have in the past. Ford highlights major service locations such as oil and other fluid locations with yellow markers.

"Five or 10 years ago there was spaghetti under the hood," Morgan said. "Now it is pretty good."

Although an organized engine compartment is less intimidating to the mechanic, it does not ensure serviceability. Component covers, for example, often improve appearance because they are made of an aluminum alloy, but they also take up space and make parts less accessible, according to Morgan.

At Chrysler, an "under hood committee" meets every two weeks to clean up appearances. The committee routes such items as hoses, cables and wires to improve serviceability.

Service business surge continued in October

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships continued in October to outpace the year-earlier level, as it has this year in all but February.

However, the increase in October was significantly less than in September.

SERVICE INDEX
105.7★

	October, '86 vs. October, '85	10 mos., '86 vs. 10 mos., '85
Gross Profit on All Labor and P&A Sales	+8.7%	+7.5%
Repair Orders Written	−2.9%	+0.5%
Total Labor Sales (Customer & Warranty)	+8.1%	+9.2%
Shop Parts Sales (Customer & Warranty)	+ 9.3%	+7.2%
Sales of All P&A	+ 5.5%	+4.0%

★—Survey by Automotive News shows that dealers' service and parts business in October, 1986, was 105.7 percent of business in October, 1985. Service business in the first 10 months of 1986 was 105.7 percent of business in the corresponding period in 1985.

Service volume for the first 10 months of 1986 also outpaced the volume during the corresponding 1985 period.

The Automotive News Service Index shows shop business at dealerships in October amounted to 105.7 percent of the volume recorded in October 1985. Shop business in September amounted to 111.4 percent of the volume in September 1985.

October was the eighth straight month in which service volume topped that of the year-ago month.

The year's largest increase occurred in June, when the service volume amounted to 114.3 percent of the volume recorded in June 1985.

In February, service volume amounted to 99.6 percent of that in February 1985.

In the first 10 months of 1986, service volume was 105.7 percent of that in the same 1985 period.

Dealers and service managers tied the increases in service volume to the strong, incentive-induced domestic car sales in September and early October. Sales of domestic cars, however, fell in late October and that may have accounted for the less impressive service volume of October, compared with September.

Industry experts say new-car customers often bring in their old cars for repairs before selling them. Also, a rush in new-car sales often results in a later wave of customers who return for warranty work.

In October, dealers also reported that winter car preparation service increased business.

A northeastern Chrysler-Plymouth-Dodge and AMC-Jeep-Renault dealer said service volume increased due to large-car sales in September.

A midwestern Ford dealer also tied service volume increases to incentive-stimulated car sales.

A northeastern Saab dealer said service increased in October due to "winterization" programs.

A western Cadillac dealer said body shop sales were up sharply. Also, the dealer said October is a "long service month" and his shop was open 23 days.

An eastern Oldsmobile dealer said "a loss of service technicians and poor sales months in July and August" contributed to an October decline.

In October, shop parts sales (customer paid and warranty) showed the largest gain of all indicators, up 9.3 percent.

Gross profit on all labor, parts and accessories sales climbed 8.7 percent; total labor sales (customer paid and warranty) were up 8.1 percent; and sales of all parts and accessories were up 5.5 percent.

Repair orders written were down 2.9 percent.

In addition, parts and accessories sales to off-premises customers were up 3.0 percent in October.

Total labor sales registered the biggest gain in the first 10 months of 1986, climbing 9.2 percent over the 1985 period. Gross profit on labor, parts and accessories sales rose 7.5 percent through October; shop parts sales increased 7.2 percent; sales of all parts and accessories climbed 4.0 percent; and repair orders written edged up 0.5 percent.

Parts and accessories sales to off-premises customers were up 1.4 percent through October 1986.

THE CARVE-OUT TRUST*

- You can now establish a new Carve-Out Retirement Trust limited to only a small group of employees (e.g., salary and clerical)!
- You can shelter an annual amount up to your salary and bonus — tax free!
- You can enjoy over 85% to 90% of the annual tax-free contribution.
- We can convert your present plan(s) to a Carve-Out. *A tax-exempt trust

Jerry Orefice has addressed national conventions, associations, "Twenty Groups," published articles in national magazines and also appeared on T.V. as a commentator on dealer tax planning and the Carve-Out Trust. Our firm has its own in-house legal counsel and a reputation for working with the top dealers in the country.

N.C. dealer sues Toyota, distributor over supply

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A North Carolina dealer is suing Toyota Motor Sales U.S.A. and its distributor, Southeast Toyota (SET), for $30 million over new vehicle allocation practices based on a "turn to earn" system.

The lawsuit filed by Rice's Toyota World of Greensboro, N.C., charges that Toyota and SET used the system to deny the dealership vehicles and cites a 1983 state law it says was designed to stop turn to earn practices.

According to the complaint, SET implemented in 1982 "a 100 percent turn to earn allocation system...based on the dealer's daily sales performance averaged over the preceding 30 days.

"The turn to earn system was subsequently modified; however, its primary thrust remained the same — the dealer had to sell a car to earn a car."

A spokesman for Toyota Motor Sales declined comment on the suit, while an attorney handling the case for SET said, "It is our policy never to comment on pending litigation. We will respond in court."

While the 1983 state law makes no specific reference to turn to earn, Donald Stickland, an attorney representing the dealership's owner, Garson Rice, said, he believes eliminating turn to earn "was the intent of the statute."

The law prohibits manufacturers from delaying, refusing or failing to deliver motor vehicles "in reasonable quantities relative to the new motor vehicle dealer's facilities and sales potential in the...dealer's relevant market area and within a reasonable time, after receipt of an order from a dealer."

The law also said that if one dealer's order is filled before a previously ordered identical car from another dealer, it is "evidence of a delayed delivery or refusal to deliver."

A clause in Rice's franchise agreement, which was entered as evidence, said his allocation would be based on sales if there is a shortage of vehicles caused by factors beyond the distributor's or manufacturer's control.

Rice's agreement states, "where such shortage is expected to exist for a significant period, it is understood and agreed that such vehicles will be allocated by distributor to dealer principally on the basis of sales performance during the most recent representative period of adequate supply."

The suit charges that in addition to using turn to earn, SET also bases allocations on: number of cars sold to World Omni Leasing, Inc., an affiliate of the distributor; the number of cargo vans a dealer orders that are converted to passenger units by another SET company; use of the distributor's finance and insurance programs; number of parts and accessories added to new vehicles shipped to the dealer by SET.

In addition to filing the lawsuit, Stickland said a complaint has been lodged with the Commission of Motor Vehicles in North Carolina seeking the suspension of SET's state license and legal action by the state to halt turn and earn practices.

Chrysler and Garrett donate turbocharged engines to schools

DETROIT — Officials from 10 Michigan schools have each received a gift of a Chrysler turbocharged engine for their engineering and automotive programs.

The presentations were part of a ceremony staged by Chrysler Motors and Garrett Automotive to mark Chrysler's production of its 500,000th turbocharged car.

The engines were presented to the schools' representatives at a dinner in Detroit last month by Frank M. Clark, general manager of powertrain operations at Chrysler, and Walt Ware, vice president and general manager of Garrett Turbocharger Division.

Each school was given a 2.2-liter four-cylinder overhead-cam engine equipped with a Garrett T-3 water-cooled turbocharger for use in the schools' vehicle laboratories.

Through the 1986 model year, Chrysler produced more than 500,000 cars with the engine. Four Chrysler turbocharged cars recently set a Chrysler speed and endurance record by averaging more than 126 mph for 24 hours.

PRODUCTION

Build is 6-month high

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production of 179,985 was the highest for any week since the 180,166 completed the week ended June 21.

The week's output was 15.29 percent more than the previous week's 156,114 but was 1.55 percent below the year-ago week's 182,811.

Companies split last week's estimated production as follows: General Motors, 52.78 percent; Ford Motor Co., 24.03 percent; Chrysler Motors, 13.61 percent; Honda of America Manufacturing Inc., 3.69 percent; New United Motor Manufacturing Inc., 2.33 percent; Nissan Motor Manufacturing Co., U.S.A., 1.62 percent; Volkswagen of America, 1.11 percent; and American Motors, 0.83 percent.

AMC's Kenosha, Wis., plant resumed production last week after being idle for two weeks for inventory adjustment. However, AMC will close the same plant today (Dec. 15) until Jan. 12 for inventory adjustment, affecting 2,000 workers.

The manager at GM's Norwood, Ohio, plant told its 3,500 workers not to report to work the week of Jan. 5. The plant, which assembles Pontiac Firebird and Chevrolet Camaro, will be closed for one week for inventory adjustment.

The number of indefinite layoffs at GM increased last week by 1,500 to 24,000. The layoffs were a result of schedule adjustments at various GM plants.

GM issued a revised figure for layoffs at its Arlington, Texas, plant: 2,100 workers are laid off, not 1,630 as previously announced.

GM scheduled Saturday (Dec. 13) overtime at plants in Lake Orion and Lansing, Mich.

Ford slated Saturday overtime at its Atlanta and Chicago plants. Daily overtime is scheduled this week (Dec. 15) at all Ford plants except Lorain, Ohio.

Chrysler's Belvidere, Ill., and Sterling Heights, Mich., plants were both slated for Saturday overtime. The same plants are scheduled for daily overtime this week.

VW's Westmoreland, Pa., plant resumed output last week (Dec. 8).

Year's best week for U.S. trucks

Domestic truckmakers slated production of 78,947 units last week, marking the best weekly output since the year-ago week's build of 83,892.

Last week's estimated build was 15.95 percent more than the previous week's 68,089.

General Motors' Pontiac West plant in Pontiac, Mich., which assembles the Chevrolet S-10 Blazer and GMC S-15 Jimmy, closed today (Dec. 15) for installation of paint equipment. A total of 1,700 workers will be laid off until Jan. 5, 1987.

The following GM plants were slated for overtime Saturday (Dec. 13): Baltimore; Detroit; and Lordstown, Ohio.

Saturday overtime was scheduled at Ford Motor Co.'s Wayne, Mich., and Lorain, Ohio, plants. Daily overtime is slated at all Ford plants this week except Norfolk, Va.

Chrysler Motors' Warren, Mich., plant is scheduled for daily overtime this week.

Canada hits million-car mark

Canadian automakers built their one millionth car of the year last Monday (Dec. 8), nine days behind 1985.

Last week's scheduled production of 25,659 cars was 9.72 percent more than the prior week's 23,386 but 4.02 percent below the year-ago week's 26,733.

Truckmakers targeted output of 13,800 units last week, up slightly (0.51 percent) from the previous week's 13,730 but 27.77 percent below the year-ago week's 19,106.

American Motors' Brampton, Ontario, car plant closed last Wednesday (Dec. 10) for inventory adjustment.

FORECAST

FROM PAGE 1

for Data Resources Inc.

Ronald Glantz of Montgomery Securities added, "The first quarter will wind up being down 10 percent from 1986 because the industry will end the year with 1.8 million cars in inventory, a quarter of a million higher than desirable. Also, every forecast out of Detroit agrees sales will be lower in 1987."

Against that backdrop, says analyst Tom O'Grady of Integrated Automotive Resources, "You would hope good judgment would prevail and sales incentives would be introduced at the beginning of 1987. Incentives have given us two good years of sales and if the domestic makers are trying to compete with the Japanese on cost, and prices have gone down, we would expect they could afford incentives."

He added that since GM has raised prices three times in the last year because of the cost of incentives, GM might as well return to them since they have already been absorbed into the price of a car.

In their already-announced production plans for the first quarter of 1987, U.S. automakers estimated production to be slightly higher than the 1986 total. Forecasts call for 2,142,972 cars, 0.70 percent more than the 2,128,067 completed in the same period of this year.

Ford Motor Co. anticipates a 13.10 percent increase from 1986 — accounting for about 60,000 new units — and New United Motor Manufacturing Inc. plans to increase output by 7.69 percent, about 3,500 units.

Chrysler Motors is cutting production by about 70,000 units or 18.87 percent, basically due to its St. Louis (No. 2) plant being down for model changeover until March 27. The plant assembled the Fifth Avenue, Gran Fury and Diplomat and is retooling to build Caravan and Voyager minivans.

American Motors is scheduled to cut its output by 3,000 units or 24.32 percent.

Major increases in 1987 first quarter forecasts from actual 1986 figures were reported by: Honda of America Manufacturing Inc., up 94.59 percent or more than 40,000 units; Nissan Motor Manufacturing Co., U.S.A., up 74.89 percent or 16,000 units; and Volkswagen of America, up 28.48 percent or 6,000 units.

GM's adjustment of first quarter production comes on the heels of cuts in its fourth quarter output, which resulted in the temporary layoff of about 18,000 workers.

Analysts expect GM to open the new year with a days supply of at least 100 units. As of Dec. 1, GM had an 84 day supply of cars. And that figure was reduced by the effects of GM's Delco labor problems in late November, which curtailed production for almost a week. The ideal days supply for January is about 70.

Analyst Glantz predicted that 1987 calendar year production will total about 6,925,000, down 11.5 percent from the 1986 estimate of 7,823,000. O'Grady agreed that the first quarter would be lower than expected and said 1987 calendar year production would be about 400,000 units lower than the 1986 total.

ASC/Canada formed

MISSISSAUGA, Ontario — ASC/Canada Inc. has been formed to serve aftermarket and original-equiment customers north of the border. Nick Rehmtulla has been named general manager.

UAW leaders attack GM in 1987 preview

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

BAL HARBOUR, Fla. — Job security, outsourcing and subcontracting — the pivotal issues in the 1987 auto negotiations — were burning topics as UAW leaders met here last week to elect subcouncil officers and top negotiators and to begin to discuss bargaining strategies.

The agony of General Motors manifested itself beneath the ritual conviviality of gatherings amid palm trees and Christmas wreaths. To the union's litany of woes, UAW Vice President Donald Ephlin announced to a general assembly that GM will close eight assembly plants for two weeks in January for inventory adjustment.

The latest layoffs will affect 24,300 workers.

GM sales have declined in the last four 10-day periods, and the company recently announced it will cut production in January at three of its newest plants, laying off 4,500 workers. GM said it is cutting production as an alternative to expensive sales incentives.

Sources at the UAW meeting here said Ephlin warned that the union's supplemental unemployment benefit funds were "not geared for massive layoffs and could come under severe strain."

Ephlin reportedly told the union leaders that component plants have worse problems than assembly plants. Though he gave no details, GM is apparently responding to analysts' urging that it needs to move toward less vertical integration.

That move will result in subcontracting and outsourcing on a grand scale and represents a major threat to the jobs at component plants — which will suffer the ripple effects of assembly-plant layoffs as well.

Speaking for the beleaguered component plants, Wayne Krumm, shop committee chairman at Local 626 at GM's New Departure Hyatt Division plant in Bristol, Conn., said, "The layoffs at assembly plants will mushroom and affect component plants. It is the workers who are paying and will continue to pay for GM's engineering and styling mistakes."

He also referred to GM's decision to sell its commercial bearing operation at the Brtistol plant, which will cut the workforce in half.

Discussions at the Miami meetings were focused on the fate of Fisher Guide Division's Elyria, Ohio, plant. In a quintessential outsourcing move, GM announced it plans to sell the Elyria trim plant to a supplier "with a lower cost structure." Members of Local 780 in Elyria said that probably means a non-union facility. GM plans to buy back much of the plant's product at a lower cost.

Ford welcomes jolly gentleman in red suit
To kick off the holiday season in the auto industry, Santa Claus attends the opening of Ford Motor Co.'s "World of Ford" product and technology display in Detroit's Renaissance Center. Ford said the 35,000-square-foot showplace was designed to entertain the public.

Fallout: *GM and EDS find it hard to escape aftermath of huge payment to Perot*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

General Motors and Electronic Data Systems made little apparent progress last week in quelling a contentious aftermath to H. Ross Perot's departure, while EDS revealed plans to combat the publicity with an advertising campaign.

The automaker and its data processing subsidiary had set out to ease the concerns of analysts and institutional investors, who will play a role in restoring confidence in GM common and Class E stocks.

But some who heard the presentations in New York and Washington walked away unconvinced. Even the guest list at one of the meetings created a stir when GM Chairman Roger Smith failed to appear and sent other officials in his place.

Meanwhile, GM's $750 million buyout of former EDS Chairman Perot and three top EDS executives triggered more lawsuits. EDS also said it was preparing an extensive advertising campaign to redirect public attention back to the computer services business.

As before, EDS stressed a "business as usual" theme, and GM staunchly defended the Dec. 1 dismissal of its board member, most vocal critic and largest shareholder. But many of the analysts and institutional holders said the presentations opened up as many questions as they answered.

Some analysts, for example, questioned EDS' optimistic growth projections at a time when GM, its largest customer, is cutting capital spending. Members of the investor group said the payment to Perot has the disturbing air of a special deal for one stockholder.

Last Friday, the Wisconsin Investment Board submitted a resolution to GM for inclusion in its proxy statement. The resolution condemned the buyout and requested that any future stock repurchases be offered to all shareholders. Friday was the filing deadline for measures that can be included in GM's proxy statement and voted on by shareholders at GM's 1987 annual meeting.

"I think it is outrageous that they would summarily decide (to buy out Perot) and not even present it to the shareholders for a vote," said Kenneth Codlin, executive director of the Wisconsin board. The Wisconsin pension fund holds 1.1 million shares of GM's Class E stock on behalf of 300,000 public employees.

Codlin was one of the members of the Council of Institutional Investors who attended Wednesday's meetings in Washington. Collectively, the 40 groups in the council own about 7 million shares of GM common and Class E stock. They had requested the meeting to satisfy their concerns about the buyout.

Initially, both Perot and Smith agreed to attend, said Steven Matthews, assistant controller for New York City and a spokesman for the council. But in Smith's place, four other executives attended - GM Executive Vice President Donald J. Atwood, GM Treasurer Leon J. Krain, GM General Counsel Elmer W. Johnson and EDS President Lester M. Alberthal Jr.

Testings by NHTSA too few, GAO finds

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — In response to a critical General Accounting Office report, NHTSA last week agreed to change the way it administers the nation's motor-vehicle safety laws.

The GAO study found flaws in the way NHTSA manages its testing and compliance program — specifically faulting NHTSA for not checking manufacturer compliance with 13 of 39 testable safety standards in at least five years and for not establishing "management controls" for the processing of safety investigations.

GAO recommended — and NHTSA and the Department of Transportation agreed to:

- Ensure that all testable safety standards are selected for testing over a certain period of time.
- Develop milestones and procedures for processing and monitoring investigation and civil penalty cases.
- Review the collection and use of accident data for selecting vehicles one year old or older for testing.

GAO also asked that NHTSA "develop guidelines for the Office of Vehicle Safety Compliance to use in determining which investigation cases should be forwarded to the chief counsel's office for penalty assessment."

DOT and NHTSA turned down that request. They said the decision to forward a case to the chief counsel's office "involves a complex set of factors and is fully

Taiwan flying high with new car intro

By Andrew Tank
STAFF CORRESPONDENT

TAIPEI, Taiwan — Taiwan's auto industry is celebrating the successful launch of the first Taiwanese-designed car. But at the same time, it is cursing a government auto policy which, by encouraging imports, threatens the financial viability of local manufacturers.

Taiwan's biggest automaker, Yue Loong, launched its Feeling (Flying Antelope) X101 subcompact at the end of October after spending $55 million on its design and development.

Five thousand were sold in the first month, making it the most successful new model ever launched in Taiwan, according to Shiaw-Huu Wang, general manager of Yue Loong's business division. Wang hopes to sell at least 24,000 Feelings next year and hence recoup lost market share.

Yue Loong Feeling X101

The snag is that Taiwan's government is under strong pressure to lift protectionist barriers on imports, since it earned a current account surplus of around $14 billion in 1986. It is reducing tariffs on imported vehicles by 5 percent a year, so that by 1990 the local auto makers will have almost no tariff protection at all.

Already imports have increased their market share

Safety not first with Reagan, Nader charges

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — In a letter to President Reagan, Ralph Nader has accused the President and Transportation Secretary Elizabeth H. Dole of failing to advance highway safety.

Nader accused Dole of a "steadfast refusal to press" automakers to produce cars with air bags and of failing to push safety research and education.

Nader

In the letter, Nader pointed to disproportionate spending to promote passive versus active systems. He said that only $1 million of the Transportation Department's fiscal 1986 budget is pegged for air bags or passive belts, and $4 million has been set aside for seat-belt education nationally. The states have budgeted $110 million, mostly for belt-use education, he said.

Nader said that DOT has not done any radio or television public service advertising for air bags either. Further, he scolded the Reagan administration for abandoning the Research Safety Vehicle program which Nader described as "not pie-in-the-sky."

At a news conference last week, Nader cited a survey of 15,475 new-car buyers, made by Newsweek magazine last February and March. It showed that 87 percent of those responding believed air bags should be standard equipment on all automobiles.

That is the highest percentage ever recorded in a survey of air-bag preference. And, it is 31 percentage points higher than the number of those who wanted a mandatory high-mounted rear brake light in the same survey.

Nader is also kicking off a "Celebrity Air Bag Pledge." Several notables have promised to buy an air-bag-equipped car from the first automaker that provides full front-seat air bags as standard equipment in a total model line.

The cars-for-stars safety campaign requires that previous-year sales for the model line be at least 200,000 or that the line have a production run of at least 200,000 in its first year.

Celebrities who have joined the campaign so far include: Steve Allen, Ed Asner, Dan Ackroyd, Phil Donahue, Dustin Hoffman, Bill Murray, Paul Newman and Abigail (Dear Abby) Van Buren. More are expected to join.

AUTOMOTIVE NEWS JOIE WILSSENS
Reporters and attorneys Howard Weitzman, left, and Juanita Brooks surround John DeLorean after his acquittal

Acquitted: *After confusion, jury says DeLorean did not embezzle money from investors*

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — A federal jury last Wednesday acquitted former automaker John Z. DeLorean of all 15 fraud and racketeering counts stemming from charges that he embezzled $8.5 million from investors in his defunct sports-car project.

The 10-week trial began Oct. 6.

Following his acquittal, DeLorean appeared on the courthouse steps with two defense attorneys. All three blasted the government, again charging that prosecutors had hidden evidence, or even "fabricated" evidence, as part of a vendetta against DeLorean.

"What kind of animal would do that?" DeLorean said, questioning the morality of government prosecutors and agents.

The 61-year-old former General Motors executive said he felt "wonderful" and was anxious to spend the holidays with his children.

DeLorean also said he felt he could still contribute something to the U.S. car industry and help it "get competitive again."

The six-man, six-woman jury returned the verdict after deliberating 5½ days, despite apparent jury-room lack of agreement that DeLorean was innocent.

In fact, less than an hour after the verdict, government lawyers were back in front of presiding U.S. District Judge Julian A. Cook Jr., seeking to have the verdict overturned because jurors apparently misunderstood some of Cook's instructions to them.

On a special verdict form, the court reminded jurors that to convict on the racketeering charge, they all had to agree on which racketeering acts were committed. The form said, "Without such unanimous agreement, you must find the defendant not guilty of count one," which was the racketeering charge.

The jurors erroneously interpreted that sentence to mean that even if there were jurors who thought DeLorean was guilty, they had to change their vote to "not guilty" to coincide with the majority and avoid a hung jury. In a federal case, the vote of the jury must be unanimous for either conviction or acquittal.

So, the jury returned a "not guilty" verdict, although two jurors believed he was guilty and one was undecided.

However, assistant U.S. attorney Joseph E. Papelian, seemingly stunned by the verdict, did not ask the court to poll each juror individually, at the time of the verdict. Cook, therefore, refused to overturn the verdict and declare a mistrial.

If Papelian had requested a polling at the time of the verdict and even one juror had expressed dis-

Mullane quits DEAC post, blasts NADA

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Saying that the Dealer Election Action Committee was "acting as though its constituency was the manufacturers not the dealers," DEAC treasurer Ed Mullane resigned his post with the political fund-raising group effective immediately.

In a letter to William E. Hancock Jr., DEAC chairman, Mullane said he believed that the National Automobile Dealers Association was "calling the shots" in determining DEAC policy.

He added, "The straw that broke the camel's back as far as my continued participation is concerned was NADA's gutless effort on federal lease and fleet legislation and our abandonment of the Iowa dealers. We turned our back on them and left them twisting in the wind."

Hancock was unavailable for comment on the Mullane resignation last week.

However, NADA told Automotive News that Hancock has replied. NADA said that in a letter to Mullane, Hancock thanked him for his role in the development of DEAC and said that the fleet subsidy issue would continue to be worked on. Hancock also said he looked forward to working with Mullane again.

NADA had no comment on the issues raised by Mullane concerning NADA's relationship with DEAC.

Mullane, long a dealer activist, also is president of the Ford Dealers Alliance. He was a driving force in the futile effort last year to obtain federal legislation barring incentives to large fleets. That failure led to NADA's adoption of a second strategy of attempting to have similar legislation enacted on the state level.

Mullane: "I can't be a part of the hypocrisy."

The Iowa Automobile Dealers Association succeeded in having such a law passed in that state. It went into effect last July. The Iowa dealers are now seeking repeal of the law because of lost fleet business and because they did not see any other state dealer groups moving to support their initial effort by trying to obtain similar legislation.

Mullane, in his letter, said he could no longer support DEAC and that, "The only honorable course for me is to tender my resignation."

DEAC was founded 10 years ago to raise money for political candidates. Mullane was one of the original trustees of the organization and, according to Mullane, the organization raises more than $1 million every two years for candidates.

While the organization technically is independent of NADA, most of its board were NADA officers at one time. Hancock was president of NADA in 1975.

Mullane said that while he believes in strong political action on behalf of dealer interests, "with DEAC tied irretrievably to NADA, and NADA's willingness to be manipulated by the manufacturers," he did not see any action coming from DEAC.

In a telephone interview with Automotive News, Mullane said that when he joined DEAC, he thought "we'd be an independent arm," but it hasn't worked out that way.

"I can't be a part of the hypocrisy," he said.

Mullane was infuriated last year when NADA could not move through Congress national legislation banning fleet incentives.

He blamed the failure on NADA. He said the dealer association was afraid to oppose Rep. John Dingell, D-Mich., who chairs the House Energy and Commerce Committee.

Dingell refused to release the bill from his committee unless there were substantial amendments which, in effect, would have weakened the measure.

Mullane reported that NADA was negotiating with Dingell to amend the measure, and that angered some dealers.

In resigning from DEAC, Mullane said, "I have had insufficient influence trying to work from inside DEAC. Perhaps I shall be more effective in changing your (NADA's) policies working from the outside."

GM expects weak start for industry in '87 sales

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

U.S. car and truck sales will likely be weak in early 1987 because of this year's car-buying incentives and tax overhaul, General Motors' chief economist said last week.

Those two factors — which have helped perk up the market in recent months — will probably steal 300,000 to 400,000 sales from the first part of next year, said George C. Eads, GM vice president and chief economist.

Still, Eads predicted that combined car and truck sales for calendar 1987 will be strong — between 14.5 million and 16 million units, or 10 million to 11 million cars and 4.5 million to 5 million trucks. That compares with an estimated 16 million cars and trucks that will be sold by the end of this year.

"There will be no boom and no recession," said Eads, who gave his outlook on the automotive industry at the Economic Club of Detroit's annual forecast meeting. "I believe that the balance of factors favors continued expansion during the coming year."

Eads expects that two recent boons to the economy — consumer and government spending — will be less of a stimulus in 1987. But declines in those areas should be offset by an improved trade picture in 1987, he said.

While Eads predicted the falling dollar will help ease the U.S. trade deficit, he also foresees some potential problems. He cited the possibility that the federal budget deficit might not decline as scheduled and that the new tax law might have unexpected, harmful consequences. Nonetheless, he said he expects the economy to get stronger as the year progresses and to grow at an annual rate of 2.5 percent.

Similarly, he said, auto sales will strengthen later in the year because of the waning effects of 1986 incentives. Also, tax reform will pull some sales from early 1987 into 1986 but eventually won't have much of an impact on the market, Eads said. The new law eliminates deductions for sales tax and some interest payments.

Imported cars should account for about 3 million sales in 1987, Eads said. And they will continue to be a challenge for GM and other domestic automakers.

"We expect the years ahead to be ones of intensifying competition as direct imports, the so-called transplants and the newly slimmed-down domestic manufacturers scramble for profits and market share," Eads said.

Eads wouldn't predict how GM, whose share of the car market has dropped from about 42 percent to 40 percent so far this year, would fare in the battle.

Eads said GM's efforts to close older plants and cut its white-collar workforce are "absolutely necessary if we are to be able able to compete effectively in the years immediately ahead."

Eads, 44, joined GM in July. He formerly was dean of public affairs at the University of Maryland. During the Carter administration, he was a member of the President's Council of Economic Advisers.

Domestic sales rise 18% in early Dec.

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Domestic new-car sales in early December topped the year-ago total.

Retail sales of domestically produced automobiles rose 18.31 percent to 190,809 from the 161,279 cars delivered in the Dec. 1-10 period last year.

However, because there were nine selling days in the period this year and only eight in 1985, the industry's total was up only 5.16 percent on a daily-rate basis.

Despite the gain in early December, the industry's year-to-date sales total of 7,732,394 was off 0.97 percent from the 7,807,818 cars sold through Dec. 10 last year.

At least one executive, Tom Pappert, Chrysler Motors sales group vice president, said year-end buying to avoid tax law changes helped sales. "It's beginning to look a lot like Christmas," he said.

General Motors, steadfastly avoiding another round of annual-percentage-rate finance incentives, reported its sixth consecutive 10-day sales decline since the APR program ended in October.

GM's sales were off 1.0 percent during the period, down to 94,120 from 95,073 last year. However, on a daily-rate basis, GM's sales dropped 12.0 percent. Cadillac, Chevrolet and Pontiac sales totals were ahead of year-ago tallies, while Buick and Oldsmobile declined.

Ford Motor Co.'s Dec. 1-10 sales total rose 50.2 percent to 60,158 from 40,046 last year. The daily-rate increase was 33.5 percent.

Chrysler Motors reported 27,572 Dec. 1-10 sales, up 40.3 percent from 19,656 last year; with a daily-rate increase of 24.7 percent.

The company said the early-December total for Dodge was the highest for the first 10 days of any month.

Despite its zero APR program, American Motors' early-December sales were off 34.7 percent to 1,110 from 1,700 last year. Its daily rate plunged 42.0 percent.

American Honda posted the fattest year-to-year percentage gain for the period — 89.9 percent — as its sales of U.S.-built cars rose to 4,202 from 2,213; its daily rate was up 68.8 percent.

NISSAN	2,006	1,458
TOYOTA	421	0
U.S. INDUSTRY TOTAL	190,809	161,279

†—Estimate

Nissan's sales total rose 37.6 percent to 2,006 from 1,458; up 22.3 percent on a daily-rate basis.

Sales of Volkswagen of America's domestic cars rose 7.7 percent to 1,220 from 1,133 last year, although the daily rate declined 4.2 percent.

Sales of the new Toyota Corolla FX-16 totaled 421 for Dec. 1-10. The car is built by New United Motor Manufacturing Inc., the Toyota-GM joint venture in Fremont, Calif. Sales began in October; the total is 3,523.

Pontiac seeks GM aid

City eyes housing project as plants die

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC — The city of Pontiac has asked General Motors to participate in a multimillion-dollar housing project to help counter the effects of planned plant closings and layoffs.

A GM spokesman said the company would review the proposal at an internal public affairs committee meeting in January.

GM has been involved in housing programs before, most notably the New Center Commons project near its Detroit headquarters.

GM plans to shut its Chevrolet-Pontiac-Canada G-car plant in Pontiac by the end of 1987, its Truck and Bus Group transit bus operations in the Pontiac Central Plant by late spring of 1987, and its heavy-duty truck operations in the same plant by August 1988. GM also plans to close its Central Foundry plant in Pontiac by the summer of 1987.

Almost 6,000 employees will be affected by the permanent plant closings, according to GM spokesmen. Some affected employees may be relocated. GM will continue to employ some 32,000 workers in the city after the layoffs.

Also, some 3,200 workers at the C-P-C G-car plant and the Fiero assembly plant will be laid off for two weeks at the beginning of 1987 to reduce inventories.

The Pontiac spokesman said the layoffs and closings will cost the city $600,000 annually in city income taxes.

Pontiac Mayor Walter Moore presented the housing proposal to GM's public affairs committee here early this month. The proposal calls for up to 30 percent, or 6,000, of the city's houses to be razed and replaced with new housing. A spokesman estimated that 6,000 houses in the city are in poor condition.

The mayor said, "We see the need for the GM name to continue to be a flagship in the community even if the manufacturing segment of the company is not flourishing."

Demolished houses would be replaced by new houses in the $35,000 and $75,000-$150,000 range.

In addition, Moore said he would like to discuss with GM a means of disposing of the plants GM will close. Alternatives, he said, are identifying manufacturers to take over the plants, turning them over to the city or demolishing them.

Ford says '87 industry can't match '86

In a year-end statement, Ford Motor Co. Chairman Donald E. Petersen and President Harold A. Poling predicted that new-car and truck sales in the United States in 1987 will continue at a strong pace, but will be off slightly from the record total of 1986.

They also said the company's strong financial performance this year means that eligible U.S. employees will get substantially higher profit-sharing payments than the $1,200 average paid for 1985.

They said Ford earnings of $2.5 billion for the first three quarters of 1986 set a record and they expected the company to finish the year in a very good financial state.

Petersen and Poling said, "This year has been very successful for the Ford team in the United States, and we believe that 1987 will be another good year for the U.S. automotive industry."

They predicted 1987 U.S. sales of 10.5 million cars and 4.5 million trucks — a total of 15 million, down a bit from the record 16 million this year and 15.7 million in 1985.

Petersen and Poling said, "Automotive sales outperformed the nation's economy in 1986 because of relatively low gasoline prices, declining interest rates and marketing incentive factors which are unlikely to have as great an impact in 1987. Moreover, we expect the Gross National Product to increase by a modest 2.3 percent in 1987, somewhat less than the GNP growth of 2.6 percent this year."

They said their 1987 sales prediction would amount to the third-highest sales volume ever. If the economy performs somewhat better than expected, they said, 1987 sales volume could approach 1985's performance.

Petersen and Poling said, "Despite increasing competition from foreign automakers, including those which are expanding their U.S.-based production capacity, we believe our excellent product lineup places Ford in a good position to more than hold its own."

They added, "With our well-balanced product array and added offerings in 1987, we expect to increase our U.S. market share — which for 1986 we project at 18 percent for cars and 28.4 percent for trucks."

For 1987, Ford has introduced a redesigned Ford Thunderbird and Mustang and Mercury Cougar and

Petersen: "Automotive sales outperformed the nation's economy in 1986 because of relatively low gasoline prices, declining interest rates and marketing incentive factors which are unlikely to have as great an impact in 1987."

rear anti-lock brakes on F-Series, Bronco and Bronco II light trucks. It soon will offer an all-wheel-drive option for Ford Tempo and Mercury Topaz.

Scheduled later in the model year are the U.S. introduction of the foreign-built Mercury Tracer subcompact, Ford Festiva minicar and Merkur Scorpio luxury sedan.

Petersen and Poling said Ford will work toward a new labor contract with the UAW in 1987 "that is fair and equitable to all members of the Ford team, while improving the competitiveness that will be essential in the years ahead. At the same time, we must continuously improve the quality, safety and value of our products and improve our customer satisfaction and loyalty."

As a reflection of Ford's new-product plans and efforts to improve quality and productivity, the executives said capital spending was about $3.7 billion in 1986 and should continue at about that same level in 1987.

Petersen and Poling said, "We believe that this system, called the Worldwide Engineering Releasing System, will be an automotive industry first in terms of size and capability. When fully launched, WERS will provide 20,000 users with interactive access to a common data base of engineering specifications and will further enhance Ford's capability to execute world-car programs."

Ford has begun several new projects with a number of worldwide partners, the Ford executives said.

Those projects include Ford's joint venture with IVECO in Europe; a project with Mazda at Hermosillo, Mexico; involvement with Kia of Korea; the worldwide Ford New Holland restructuring; and its joint venture with Volkswagen in South America.

November sales dip; year shows gain

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck sales in November totaled 359,191, down 6.2 percent from last year, according to figures compiled from reports by individual manufacturers and the Motor Vehicle Manufacturers Association.

For 11 months of 1986, sales of 4,426,917 trucks led last year's by 3.1 percent.

Class 8 sales of 103,236 were off 14.1 percent for the 11-month period.

However, Class 7, which has been siphoning customers from the industry's heaviest-duty segment, showed a 3.1 percent increase for the period on sales of 90,893 vehicles.

Class 6 sales of 40,299 were off 7.9 percent during the 11-month period, while Class 5 sales of 5,292 were up 5.5 percent.

No sales of Class 4 vehicles were reported.

As previously reported, the Class 1-3 light-duty sales of 4,187,197 for 11 months were up 3.7 percent over a year earlier.

Among the gainers in the heavy-truck segment in November, Mack sales of 1,835 were up 12.6 percent over the 1985 total. Kenworth turned in a robust performance for the month with sales of 929, up 16.1 percent over last year. Volvo's sales of 1,044 were up modestly over 1,017 a year earlier.

Other heavy-duty manufacturers, including Ford, Freightliner, GMC, Navistar and Peterbilt, showed declines in November. For 11 months, all heavy-truck manufacturers were down from last year's totals.

Iveco Euro and EuroTurbo models feature a new look

Iveco: *Sales gain expected from new programs*

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Iveco Trucks of North America is optimistically targeting 3,600 sales for calendar 1987, up from 3,000 in 1986. The company bases the forecast on upgraded new models, broader market coverage, and aggressive marketing programs.

The importer has felt the pressure of new Japanese competitors in its medium-segment markets and has reduced the wholesale prices of its 1987 models by an average 3 percent, according to William E. Eichner, vice president of dealer sales. The new models went on sale Dec. 3.

Eichner said the price cuts were made without considering equipment changes on the new models. Iveco does not have suggested retail prices for its trucks.

For 1987, the company has changed the designation of its trucks from the "Z range," which includes models like the Z-110 and Z-120, to the Euro 110, 120 and so forth.

Eichner said the new designation stresses Iveco's European heritage and its positioning as a premium product with premium pricing.

Iveco has increased its market coverage by certifying its heavier 335 turbo and 435 turbo in California for the first time.

Iveco's products run from the Class 2 to the light end of Class 6 segment, though Eichner said Class 3 accounts for "by far" its greatest volume.

With the arrival of competitors like Isuzu, Hino and Nissan Diesel, Iveco has begun to feel the heat of what it identified as the "phantom" customer class when it entered the U.S. market 10 years ago. That class is comprised of wholesale and retail distributors.

The influx of Japanese vehicles made "a greater initial impact than we anticipated," said Luciano Rolando, chairman and president of Iveco Trucks of North America.

Iveco's calendar 1986 sales, for example, are projected to be at least 200 units below last year's.

"In retrospect, we might have countered more aggressively (Japanese) claims that their lower-priced trucks offer the same quality and value as Iveco's," Rolando added.

The Japanese also were able to lure some of Iveco's dealers away.

Rolando said that while the U.S. market continued to expand in 1986, it didn't grow fast enough for Iveco to be successful in the "premium-product" position it held.

However, the Italian importer has begun dealer-network evaluation, he added, strengthening its ties with dealers who have demonstrated a commitment to its products. It is also refranchising dealers in other key markets.

Officials said they feel that, based on their new products, pricing and marketing programs, they can regain their momentum.

They said they feel that tax changes will help spur the growth of smaller businesses, particularly service businesses, which are its key markets.

To observe its 10th anniversary in the United States, the company is offering a limited edition of 50 "Silver Series" trucks, available with a special exterior package.

New for '87

Iveco restyled its 1987 models, upgraded their mechanical components and improved their fuel economy.

Exteriors feature gray, polyurethane finish on the grill, bumper, fender flare, step and splash guard.

Corner air foils of PVC protect cab sides and windows. Side mirrors were restyled and side marker lamps relocated to improve visibility.

Cab headroom increased by three inches. Contoured eight-way adjustable drivers' seats, storage pockets and adjustable map lights were added.

Dashboards have easier-to-read instruments, a standard new direct-drive tachometer and upgraded indicator warning light panel.

Printed circuits and plug-in, blade-type fuses improve the serviceability of the dash.

The 8060 engine has a larger bore and stroke and 358-cid rating. It has modified piston swirl chambers and a lighter weight, durable crankshaft.

An improved cold-weather starting system automatically senses ambient temperature for improving startability.

Iveco Euro 220's have fully-synchronized forward gear transmissions. Shifting has been improved on other models.

Iveco EuroTurbo 340 and 450 models have a heavier, hypoid-design axle, produced jointly by Iveco and Rockwell.

Brakes on the Euro 110, 120 and 220 were improved and front disc brakes standardized on the EuroTurbo 230.

The Euro 110 features a larger-bore master brake cylinder. Brake linings for the Euro 110 and 120 models were improved.

Iveco strengthened the front stabilizer bar on its Euro 110. Frame ratings for all models went to 61,166 pounds per square inch.

3 Freightliner executives to buy Consolidated Metco subsidiary

PORTLAND, Ore. — Freightliner Corp. has signed a letter of intent for the sale of its wholly owned Consolidated Metco Inc. subsidiary to a management group of three Freightliner officers. The parties expect to close the transaction in the first quarter of 1987.

Independent of Freightliner, Metco developed into a well-regarded supplier of diversified products such as aluminum castings, diesel engine parts and various structural foam products for various industries.

Metco has plants in Portland and Clackamas, Ore., and Monroe and Cashiers, N.C. It has 450 employees, and more than 50 percent of its sales are to customers other than Freightliner.

When Daimler-Benz AG, of West Germany, acquired Freightliner in 1981, Metco was part of the package. Since then, Freightliner has been focusing its attentions more narrowly on selling Class 8 trucks to the North American market.

Consolidated Metco, as a peripheral operation, no longer fits into its long-range plans. Peter E. Rupp, Freightliner president and chief executive officer, said he was pleased that new ownership would ensure continuity for Metco's business.

He said he expected that Metco, based on the experience of its new owners, would be able to continue developing markets for its diversified products.

Rupp added that Freightliner has invested nearly $100 million during the past five years in upgrading its truck manufacturing operations.

It also has invested heavily in research and development for future products, he said.

ARMBRUSTER STAGEWAY
AMERICA'S LIMOUSINE PIONEER

And now. . .for the first time ever.

Armbruster/Stageway, America's oldest and largest limousine manufacturer, puts the highest quality limousines ever built - on sale. 1986 Silverhawk's, Embassy's, Silvereagle's at factory direct close out prices starting as low as $33,965.00. Call now for pricing and financing.

Armbruster/Stageway limousines on sale won't last long. Get real quality at "Chop Shop" prices.

- Lifetime Frame Warranty
- 5 Year Rust-Through Warranty
- $15 Million Product Liability Insurance

Computers help Ford's Kentucky plant

NEW YORK — A Ford Motor Co. official said that the company's advanced computer-integrated system for manufacturing heavy truck frame rails has significantly improved the quality and productivity of its Kentucky truck plant.

Morgan M. Whitney, director of Ford's Robotics and Automation Applications Consulting Center, discussed the progress at the IMEX '86 Manufacturing Technology Conference.

He said that since the plant's computer-integrated frame piercing system began operating in the 1985 model year, scrap rates and raw material inventory at the plant have been greatly reduced and design errors have been virtually eliminated.

More than 65 people who formerly performed heavy, manual-labor jobs traditionally required in frame drilling have been reassigned to other areas, he added.

To date, the $16 million computer-integrated system has produced more than 60,000 frames.

The Kentucky truck plant produces about 60,000 heavy trucks annually, and most are custom-built. Up to 250 holes are pierced into each truck frame. Frame rails vary from 14 to 40 feet in length and from 9.5 to 13.5 inches in depth.

Ford's efforts in improving the efficiency of its Kentucky truck plant, along with its aggressive marketing/advertising programs, undercut recurring industry rumors that it may follow General Motors in bailing out of the heavy-truck business.

EPA to query Congress on vapor recovery issue

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The fate of an EPA proposal that would require special fuel vapor recovery equipment on motor vehicles is very much up in the air, according to Craig Potter, EPA's assistant administrator for air and radiation.

Potter told a meeting of state environmental commissioners here that the agency will seek guidance from Congress next year on how best to enforce ozone standards required by the Clean Air Act.

Vapor recovery equipment on automobiles is only one of the ozone options confronting EPA, and it is the one automakers oppose most vigorously.

Ozone is formed by a complicated chemical reaction of nitrogen oxide and hydrocarbons emitted primarily by vehicles. Ozone is known to cause respiratory problems. When filtered by sunlight, ozone creates smog.

Enforcement options under consideration by the agency include fuel vapor recovery devices on either vehicles or gasoline pumps, expanded inspection and maintenance programs for motor vehicles and restrictions on vehicle operation.

Another plan is to reduce the volatility of gasoline blends. According to Potter, most vehicles are designed to run on gasoline less volatile than that generally marketed. He said there is evidence that volatility controls could lessen the amount of gasoline vapor that escapes during refueling, thus reducing the need for vapor recovery equipment.

But a larger issue is looming, Potter told his audience. None of these steps will bring states with severe nonattainment problems into compliance with the congressionally mandated ozone control standards by the end of next year.

"At this point there is no way we will meet the deadline" of Dec. 31, 1987 required by Congress "even with the most draconian measures we can imagine," he said.

"I don't think Congress ever contemplated the situation we are in now. It's very troubling," he said. EPA estimates that 73 of the nation's largest metropolitan areas exceed the standard.

State officials at the meeting said they were concerned by the agency's lack of an enforcement strategy because without federal enforcement, states will have to implement their own policies or face sanctions required by the federal law.

EPA may cancel offending states' federal highway money and may restrict construction of polluting facilities.

Further complicating the ozone control struggle are recent court challenges to EPA's Reasonable Extra Efforts Program (REEP). It allows states to avoid sanctions by convincing EPA they are making progress in meeting pollution control standards.

Saying the program may be in trouble with the judiciary, EPA General Counsel Francis S. Blake prepared a 27-page memo on the situation for EPA Administrator Lee M. Thomas. The memo was released earlier this month.

Blake told Thomas the program, "while defensible, presents major legal problems, and the risk of an adverse court action is significant."

If EPA does seek formal guidance from Congress on ozone control methods, House Energy and Commerce Committee Chairman John Dingell, D-Mich., is sure to have input.

In response to a letter Dingell sent EPA early last month, Thomas replied that "a strict reading of the (Clean Air) Act could lead to massively disruptive measures. In some areas of the country, it is not even clear that attainment is possible in any realistic sense in the short term."

Thomas continued, "On its face, it seems clear that in areas with the most intractable nonattainment problems . . . extremely disruptive measures, with enormous adverse social and economic impacts, would be necessary to bring about attainment."

Gray-market importer fined in Houston

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — As part of a federal crackdown on illegal gray-market vehicles brought into the Houston area, a U.S. District Court judge has ordered an importer of Mercedes-Benz cars to pay a $24,000 fine and undergo six months of restricted movement.

The sentence was imposed on Dennis Ray Alston, president of DRA Construction Co., Houston.

A former employee of the firm, Phillip Anthony Williams, also of Houston, has been sentenced to three years probation and 80 hours of community service.

The convictions of the two men are the latest in a string of gray-market fraud cases prosecuted by the U.S. Justice Department. Both men pleaded guilty to violating EPA rules for nonconforming motor vehicles.

A third co-defendant in the case, Norbert E. Gall, a West German citizen and former resident of Houston, did not appear for the hearing where he was to be sentenced for felony conspiracy and a number of felony customs violations.

Gall has been declared a fugitive by the U.S. Attorney's Office. His bail has been revoked and a bench warrant has been issued for his arrest.

Alston's fine includes the payment of approximately $3,800 to purchasers of several of the autos for expenses they incurred as a result of the fraud. Alston pleaded guilty to one count of felony conspiracy and 10 violations of the Clean Air Act.

Williams was convicted on one felony conspiracy charge and three counts of smuggling.

The Houston gray-market cases have focused on the importation of nonconforming autos under an exemption to EPA emission requirements for vehicles more than five years old. Ten vehicles imported under the exemption by Alston's company did not qualify, the Justice Department said.

Earlier this year, the Justice Department obtained two other convictions for gray-market violations in the Houston area. In another case, a plea of guilty was entered by Edward F. Wiatt on Nov. 12. Wiatt is former co-owner of Grand Prix Motors in Houston and is scheduled for sentencing on six counts of violating the Clean Air Act by submitting false documents to EPA.

The cases involve the importation of nonconforming Mercedes-Benzes for resale in the United States. Assistant U.S. Attorney Nancy L. Holley said the Justice Department's investigation is ongoing.

EPA regulations allow a waiver of U.S. emission standards for imported motor vehicles only if importation is done on a one-time basis for personal use, if the vehicle is not resold for at least two years from the date of importation and if the vehicle is owned by the importer prior to importation.

EPA regulations do not allow commercial enterprises to arrange for the purchase of the vehicle, and the importer must be an individual, not a business.

The exemption was approved by the agency for use by U.S. government personnel serving overseas, although other U.S. citizens may import cars. The EPA exemption does not eliminate Department of Transportation safety modification requirements.

Output drops from 9-month high

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled production of 179,426 cars last week, 1.37 percent below the previous week's 181,921.

The prior week's output was the highest for any week since the 182,516 completed the week ended March 8.

Last week's targeted production was 8.73 percent more than the year-ago week's 165,014.

All assembly plants will close Wednesday (Dec. 24) for the Christmas holiday. They will reopen Jan. 5.

So far this year, 7,667,336 cars have been assembled, 4.76 percent below the 8,050,518 built last year at this point.

Companies shared last week's estimated output as follows: General Motors, 53.35 percent; Ford Motor Co., 24.60 percent; Chrysler Motors, 13.26 percent; Honda of America Manufacturing Inc., 1.71 percent; New United Motor Manufacturing Inc., 2.34 percent; Nissan Motor Manufacturing Co., U.S.A., 1.63 percent; and Volkswagen of America, 1.11 percent.

American Motors' Kenosha, Wis., plant was idle last week for inventory adjustment. The plant is scheduled to resume output Jan. 12.

GM has announced January layoffs at nine plants; 26,400 workers will be affected. Eight of the plants will be down for inventory adjustment.

The following plants will be idle from Jan. 5 to Jan. 19: Flint, Mich., 2,700 workers; Fairfax, Kans., 5,000; Fiero plant in Pontiac, Mich., 1,600; Norwood, Ohio 3,500; Pontiac G plant in Pontiac, Mich., 1,600; and Van Nuys, Calif., 2,200.

GM's Leeds, Mo., plant will be down from Jan. 5 until Jan. 12, affecting 3,700 workers. The Lordstown, Ohio, plant will be closed from Jan. 19 until Jan. 26, affecting 4,000 employees.

GM's Lakewood, Ga., facility will be closed for model changeover from Dec. 23 until early May, idling 2,100 workers. The plant will switch from Chevette-Pontiac 1000 to Chevrolet Caprice cars and wagons, Buick LeSabre wagons and Pontiac Safari wagons.

GM slated Saturday (Dec. 20) overtime at its Lansing, Mich., plant.

Ford scheduled Saturday overtime at its Dearborn, Mich.; Edison, N.J.; Wayne, Mich.; and Kansas City, Mo., plants.

Chrysler's Belvidere, Ill., and Sterling Heights, Mich., plants are slated for daily overtime today (Dec. 22) and tomorrow.

Truck production slips for week

Last week's targeted domestic truck production of 78,594 was 3.78 percent below the previous week's 12-month high of 81,679.

The latter total was the best since the week ended Dec. 14, 1985, when 83,892 trucks were assembled.

Estimated output last week was 5.98 percent more than the year-ago week's 74,162.

Year-to-date, 3,458,237 trucks have been built, 1.51 percent more than the 3,406,855 completed last year at this point.

General Motors slated Saturday (Dec. 20) overtime at its Baltimore; Detroit; and Lordstown, Ohio, plants.

Saturday overtime was scheduled at Ford Motor Co.'s Kansas City, Mo.; Lorain, Ohio; and Louisville plants.

Chrysler Motors' Warren, Mich., plant is scheduled for daily overtime today (Dec. 22) and tomorrow.

All truck plants will be closed from Wednesday, Dec. 24, until Monday, Jan. 5, for the Christmas holiday.

Canadian auto output moves up

Last week's Canadian auto output totaled 25,599, 1.65 percent more than the previous week's 25,183 and 17.38 percent more than the year-ago week's 21,808.

So far this year, 1,047,051 cars have been assembled, 3.52 percent below the 1,085,209 completed last year at this point.

Truckmakers scheduled production of 14,845 units last week, 5.82 percent more than the prior week's 14,029 but 14.71 percent below the year-ago week's 17,405.

Year-to-date, 766,093 trucks have been built, 9.19 percent below the 843,588 assembled last year at this time.

General Motors' Ste. Therese, Quebec, plant will be idle the week of Jan. 5 for inventory adjustment.

Port expansion scheduled for N.Y.-N.J. area

NEW YORK — The Port Authority of New York and New Jersey announced it will build a new $31 million port facility for unloading and processing imported automobiles.

The new facility will be located on 145 acres approximately two miles from the present car-processing center at Port Newark/Elizabeth.

The existing facilities handled 375,000 vehicles in 1985, agency officials said, and industry projections indicate this port area will be handling approximately 600,000 vehicles by 1995 if it maintains its 15 percent market share.

The companies currently shipping through the facility include Nissan, Toyota, Honda, Mazda, Hyundai, Renault, Peugeot, Jaguar, BMW, Alfa Romeo and Volvo.

The Port Authority intends to build a vessel berth in addition to paving the area and installing utility connections.

Officials also said discussions are being conducted on providing rail service to the area.

The Port Authority probably will seek a Foreign Trade Zone designation for the site.

— John A. Russell

Bramalea computers purchased by AMC

DETROIT — Westhead Associates has signed a $1.8 million (Canadian) pact to provide a production monitoring and diagnostic system for the American Motors plant in Bramalea, Ont.

Westhead will install 11 PDM 800 systems at the plant. The highly automated Bramalea plant will use more than 100 robots in body assembly.

The PDM 800 color graphic work stations will be in various assembly areas to provide on-line production and maintenance information to main assembly line workers. For example, in case of line stoppage, more than 25,000 input/output points connected to the PDM 800 network — via welding robots, other automated devices and programmable controller networks — are scanned and analyzed.

61st year—$50.00 per year, $1.25 per copy

Georges Besse: Made tough but necessary decisions — laying off workers and selling assets — to restore Renault to profitability, only to be assassinated by terrorists outside Paris home.

Malcolm Bricklin: Exceeded expectations, selling almost 50,000 low-priced Yugo imports and announced another U.S.-bound cheapie for 1988 — Malaysia's highly touted Proton Saga.

Peter Fischer: Amid big brand-wide sales declines and massive negative publicity over Audi's "sudden acceleration" problem, Fischer was sacrificed and removed as Audi's U.S. chief.

Lee Iacocca: He announced a major Chrysler reorganization and led a successful Statue of Liberty salute — despite being fired from a presidential commission in a name-calling brouhaha.

Takashi Ishihara: Nissan chairman reported his company's first loss in 35 years — largely from massive declines of the dollar against the yen, which hurt profits of all Japanese makers.

1986 *Newsmakers of the Year*

Max Jamieson: U.S. marketing chief made Hyundai the most successful first-year import ever — selling almost twice the 100,000 expected of the low-cost South Korean car.

H. Ross Perot: After criticizing GM, the billionaire EDS founder became richer by agreeing to sell his GM stock and quit and be quiet in exchange for $750 million for himself and top aides.

Roger Smith: GM chairman criticized over Perot buyout, declining market share, sluggish sales, reduced profitability, costly incentives, leadership ability and quality of GM cars.

Jack Telnack: Designer of highly successful Taurus-Sable line directed a new team approach to car building that helped Ford earn record profits, possibly even exceeding those of GM.

James Woulfe: NADA president created new factory-dealer dialogue and took active role through Project 2000 in studying and developing ideas and policies for a changing industry.

Year's top story: A time of turmoil at GM

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

It is an overstatement to say that whatever *could* go wrong *did* go wrong for General Motors in 1986.

It is *not* an overstatement to say that 1986 was something less than a prime year for the world's largest manufacturing corporation.

The time of turmoil at GM took first place in the Automotive News editorial staff's 34th annual Story of the Year poll.

GM was beset with problems that usually happen only to the other guys: Plant closings, declining sales, loss of market share, scaleback of product programs including the vaunted Saturn project, rethinking of truck and bus positions, troubles with its showcase computer subsidiary, falling profits and a hefty third-quarter operating loss.

Second place in the voting went to another GM happening — the $750 million buyout of the Class E stock of H. Ross Perot and his top associates and Perot's removal from the GM board of directors and from the chairmanship of GM's Electronic Data Systems subsidiary. Perot criticized GM. GM was not amused. Exit Perot.

The No. 3 story was the costly succession of incentive programs fueled by GM and adopted by other domestic makers in an attempt to breathe some life into a flat market. That, too, was pretty much a GM

Audi won't recall its runaways

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has asked Volkswagen of America to formally recall all 1978-1986 Audi 5000s with automatic transmissions, although the agency stressed it has not completed its probe or pinpointed the cause of unintended acceleration with enough certainty to order a recall.

VWoA said NHTSA's request pertains to "work that is already underway" and declined to issue a formal recall. The company said it has already invited owners of the estimated 250,000 vehicles involved to bring their cars in for added safety devices and free replacement of any defective parts. VWoA is the U.S. importer of Audi.

VWoA Vice President Philip Hutchinson said his company could not find safety-related defects in the cars and would not send out legally worded defect notification letters or make a formal safety-related recall.

Mandated recalls normally occur only after legal findings, which can be fought in public hearings or in the courts by the companies involved. Those hearings are so time-consuming that NHTSA routinely prefers to ask manufacturers to make voluntary formal recalls.

"Audi has been performing that work for several months, has already installed more than 50,000 automatic shift locks in 1984-1986 models and replaced several thousand idle speed stabilizers under voluntarily initiated service actions, which included notification to every owner," Audi of America said in a statement. Audi of America is a division of VWoA.

The statement continued, "NHTSA, by issuing their recommendation, recognizes the

World's auto sales seen dipping in '87

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Worldwide new-car sales will fall slightly in 1987 as volume stabilizes in Western Europe and declines about 3 percent in North America.

The London-based DRI-Europe research group projects world sales of 32,459,000 cars in 1987, compared with an expected total of 32,737,000 this year. By 1990, DRI-Europe sees the world market growing to 34,973,000.

Though 1986 represents the fourth straight year of expansion in the world industry, DRI-Europe noted that unlike recent years, 1986 growth has been uneven.

"A regional analysis shows that the big and mature car sales regions are enjoying healthy sales growth in 1986 while Latin America, Asia-Pacific and the Middle East and Africa regions are lagging behind," the report said.

But while the world's number three market, Japan, grows in 1987, Western Europe will slow considerably and the U.S. market

Japan's gain flattens out in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — After several months of unrestrained growth, Japanese new-car sales in Europe slowed significantly in November, according to industry estimates compiled by Automotive News.

The sales slowdown coincided with reports from Tokyo that exports to Europe plunged in November — the first sign that voluntary restraints reportedly imposed last summer have taken effect.

Though the Japanese have been running 20 percent above last year's pace in Europe, sales were flat in November. Japan's carmakers registered a combined increase of only 0.1 percent. Nissan, Toyota and Mazda — the three Japanese leaders in Europe — declined in November.

New-car sales in Europe during the month were 858,600, up 7 percent over November 1985.

The consolidated Japanese market share, which reached 12 percent several months ago, slipped to 11.9 percent for the first 11 months of 1986. In September, Japanese carmakers accounted for 13.7 percent of new-car sales in Europe. In November, their share was 10.3 percent.

Nissan was off 4.7 percent in November (compared with the 1985 month) with sales of 23,800; Toyota dropped 4.2 percent to 21,000 and Mazda tumbled 9.1 percent to 14,200.

For the year, Nissan was 12.8 percent ahead with volume of 331,100. Toyota was 22.6 above 1985 at 317,900 units, and Mazda was 16.8 percent with sales of 224,300.

Despite its sales decline last month, Nissan held on to 3.1 percent of the year-to-date European market, while Toyota dropped a tenth of a percentage point to 2.9 percent. Mazda clung to 2.1 percent of the 11-month market.

Mitsubishi's surge continued unabated in November in spite of the overall Japanese slowdown. Its European sales were up 37.8 percent to 10,900. For the year, Mitsubishi was up 20.8 percent at 133,600.

Through 11 months, Japanese producers sold 1,286,200 cars in Western European, compared with 1,140,400 for all of 1985, when the Japanese finished with 10.7 percent of the market.

Japanese sales were off 25.2 percent last month in the United Kingdom, where a "gentleman's agreement" restricts market share to about 11 percent. Through 11 months, the Japanese held 11.2 percent of UK new-car sales on volume of 201,100, up 3.6 percent from 1985.

In West Germany, where there are no restrictions, Japan's carmakers are still ringing up big gains. Sales of 31,800 last month were one-third above the previous November's and amounted to 15.6 percent of the German market.

Critics view Japan's increase in Europe as a shift away from the U.S. market caused in part by the yen's sharp appreciation against the dollar and pressure for restraints.

Though Japan's trade ministry reportedly convinced automakers last summer to cap exports to Europe at 11 percent above 1985 levels, there was no immediate evidence of a curb in shipments. But the effort may finally be paying off.

Overall new-car sales in Europe totalled 10,826,600 through November, up 8.5 percent over the same period in 1985. The healthy European market has already surpassed the record 10,643,000 units sold in all of 1985.

The Volkswagen Group continued to lead the European sales race through 11 months. VW, Audi and Seat combined for 14.5 percent of the total market with sales of 1,575,100.

Audi, which had lost volume in Europe for several months, rebounded in November on the strength of its new Audi 80 line. Audi sales were up 19.3 percent to 22,200 in November.

VW's Golf/Jetta line continued as the best-selling car in Europe with 11-month sales of 741,700, accounting for 6.9 percent of the European new-car market.

The Fiat Group remained a strong second in the European standings with sales of 1,363,700 and 12.6 percent of the market. The share would be 14.1 percent with Alfa Romeo, which Fiat acquired in November.

Ford was next with sales of 1,272,400 and an 11.8 percent year-to-date share. Ford's 13.7 percent improvement in November was highest among the Big Six full-range producers in Europe. Sales were up 7.4 percent for the year.

Peugeot SA held 11.3 percent on sales of 1,220,300 after surpassing General Motors in October. GM's year-to-date share dipped slightly from 11.2 percent in October to 11.1 last month. Sales totaled 1,197,300 through November, an increase of 4.9 percent.

Renault continued to narrow the gap between itself and the other volume producers in Europe.

Isuzu may use plant GM shuts in Belgium

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — General Motors will cease production in one of its two plants in Antwerp, Belgium, in 1988, heightening speculation that Japanese partner Isuzu will take over the vacated factory.

GM Continental, the U.S. automaker's Belgian unit, will concentrate car assembly in its more modern Plant 2 in Antwerp starting in September 1988. It plans to operate the facility six days a week on two shifts, with employees working four days a week.

According to various rumors, the vacated Plant 1 will be used by Isuzu to produce cars for the European market.

The new arrangement announced by GM will result in an unspecified employment reduction in Antwerp. But the cuts would be achieved through attrition and early-retirement.

GM Continental currently employs about 11,400 persons. The Opel Kadett is produced in Plant 2 and the Ascona and Manta coupe are built in Plant 1.

Plant 2 has been outfitted with new automated equipment in recent years. The company recently spent $143 million on an automated paint shop as part of a $619 million investment in Antwerp.

The proposal to operate six days a week on two shifts, with employees working four days a week, is subject to negotiation with the union representing workers at the plant. Talks are expected to begin within the next few months.

He said it has not been decided which models will be assembled in Plant 2 after the changeover, but he said the company "will likely produce more than just the Kadett."

GM has declined to comment on reports that Isuzu may eventually use the other Belgian plant as a European production base.

GM said there are no plans to dismantle Plant 1, which was completed in 1953. The GM Continental representative said the facility will be kept in running condition by a staff of about 30 maintenance employees in case it is needed at "short notice."

The two Antwerp plants currently turn out about 1,700 cars per day, with Plant 1 producing 35 units an hour and Plant 2 building 75 per hour. This year, GM Continental will produce a record 383,000. The company exports more than 90 percent of its output, with 35 to 40 percent going to West Germany.

By itself, Plant 2 will have capacity of about 370,000 to 380,000, although the total will depend on union negotiations.

GM has said it will trim its European car operations workforce of about 100,000 by some 5 percent a year in the next few years.

General Motors lost $372 million in all of its European operations in 1985. Heavy investment for the Opel Omega launch was costly.

Renault shuts Mexico Jeep plant

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Renault has quietly closed its Jeep Wagoneer operation in suburban Vallejo because of poor sales.

The company withdrew from the Mexican car market in August for similar reasons. It leaves Renault with just one plant in Mexico, Gomez Palacio, which builds F engines for export.

Closing of the Wagoneer assembly plant and the Lerma plant that supplied it with engines were not publicly announced, but the combined workforce of 500 has been paid termination benefits.

Alain Hayat, general secretary of the Renault organization in Mexico, said the two plants, plus the car plant in Ciudad Sahagun, will be sold.

"There were many reasons for stopping Wagoneer production," Hayat said. "The main reason is the situation in the domestic market. Sales were very low and it was difficult to have a significant operation in a plant like Vallejo."

Renault sold only about 2,000 Wagoneers in 1986. The number still in inventory is not known, but Hayat said that distributors were selling the vehicle at the normal price of about $13,300.

Before its closure, Renault made the Alliance, Encore, R5 and R18 at Ciudad Sahagun.

Canadian sales off 16% in November despite incentives

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Domestic new-car sales in Canada in November were 16.46 percent below the total for the year-ago month.

Canadian dealers delivered 51,651 cars in November compared to 61,834 in November 1985.

Ford Motor Co. and Chrysler Motors tried to bring Canadian customers back into the showrooms with incentives on a limited number of car and truck lines. However, sales remained below year-ago levels.

New-car sales for the first 11 months of 1986 were off 3.10 percent from the same period in 1985. The 11-month total was 730,016 compared to 753,380 last year.

All four domestic automakers reported a drop in car sales in November.

MARKET SHARES November 1986

Cars	
General Motors	53.37%
Ford Motor Co.	23.76%
Chrysler Motors	19.90%
American Motors	1.90%
Volvo	1.07%
Trucks	
General Motors	43.25%
Ford Motor Co.	32.97%
Chrysler Motors	18.86%
Jeep	5.92%

On a percentage basis, Ford had the biggest November-to-November sales loss. Sales dropped 23.02 percent from 15,947 to 12,275. Ford offered cut-rate interest on 1986 Escort and Lynx and 1986 and 1987 Tempo, Topaz and Ranger models in Canada.

Chrysler's car sales declined 17.97 percent in November, dropping to 10,274 from 12,525 a year ago. A Chrysler spokesman said the company continued to offer incentives on its K-cars and light-duty trucks during November.

Sales of General Motors cars dipped 12.96 percent in November. GM's Canadian dealers delivered 27,568 cars during the month compared to 31,675 a year ago.

Also experiencing sales declines were American Motors and Volvo. AMC car sales continued to slide, dropping 11.18 percent in November. AMC sold 977 cars compared to 1,100 for the year-ago month.

Volvo sales were off 5.11 percent, dropping to 557 in November from 587 a year ago.

Canadian new-truck sales were off 4.97 percent in November compared to the same period a year ago. The monthly totals were 26,221 this year and 27,595 last year.

Chrysler's November truck sales climbed 17.15 percent over a year ago. The only other maker to show an increase in that category was AMC Jeep, which posted a 10.22 increase in November.

Bush Task Force seeks to knock out CAFE

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Reagan administration plans to ask Congress to "rethink" the automotive fuel-economy standards, but a spokesman for the vice president's Task Force on Regulatory Relief made it clear that a full-fledged repeal may be sought.

Industry reaction was swift and predictable: Ford Motor Co. answered with statesmanlike approval, General Motors with enthusiastic relief, Chrysler Corp. with indignant disapproval.

Public interest groups broke into two camps: Ralph Nader's Public Citizen called the plan shortsighted; the liberal Center for Auto Safety threatened opposition; and the conservative Competitive Enterprise Institute applauded the administration's move.

The Center for Auto Safety and Public Citizen have filed six lawsuits opposing rollbacks of corporate average fuel economy (CAFE) standards. Taking an opposite tack, CEI recently sued to abolish CAFE on grounds that the standards encouraged smaller and less-safe cars.

The recently re-established Task Force on Regulatory Relief, in its first meeting, included CAFE standards as one area that endangered America's productivity and competitiveness.

It is expected that repeal of CAFE standards will be advocated in the president's State of the Union Message next month.

The task force rationale used at the first meeting was: "CAFE standards place American automakers at a competitive disadvantage, create economic distortions in the market and cause the export of jobs abroad, thus exacerbating the trade deficit."

In view of deregulated oil and the "dramatic improvement" in the domestic industry's CAFE, the task force headed by Vice President George Bush said the question to be addressed is "whether further adjustments should be dictated by gasoline prices, not government fiat."

In making the announcement, Bush pointed to the accomplishments of the administration's 1981 regulatory relief agenda. That effort, he said, resulted in "savings of more than $150 billion over a decade for investment, research and development, increased productivity and new jobs."

However, the task force's major goal of rescinding the passive-restraint standard was overturned by the courts.

In response to the task force's new intiative, the liberal public interest groups drew a parallel. They said that energy conservation may have as much of a constituency as passive restraints, especially on Capitol Hill. They predicted that when Congress returns in January, lawmakers — especially in the Senate, now controlled by Democrats — may choose to fight back.

A General Motors spokeman welcomed the proposal to "address the damage being done" to full-line makers who have spent billions to downsize.

GM said the Japanese have been favored while full-line makers "are being forced from their traditional larger-car base." GM wants to end what it calls the CAFE "straitjacket."

GM's current liability for civil penalties — $5 per car for every one-tenth of an mpg by which its fleet misses the CAFE standard — is estimated at about $500 million even with three years of carryback/carryforward credits.

A Ford spokeman said the company was "pleased" by the recommendation to address the "inequities" of the 1975 Energy Policy and Conservation Act.

Ford, which once faced $50 million in CAFE fines, is believed to have enough credits to wipe out its liability.

Chrysler said the proposal "doesn't make sense."

According to a Chrysler spokesman: "Throwing out fuel-economy standards just a day after OPEC unilaterally raised the world price of oil means we can't read history. We are setting ourselves up for a third oil shock. It also means the end of America's energy policy."

In opposing recent rollbacks of CAFE standards by NHTSA, Chrysler has said that it has done its job and met the standards and now its two major domestic competitors should do likewise.

Joan Claybrook, president of Public Citizen and former NHTSA head, predicted the auto industry may find itself in trouble all over again.

She said full-line makers had a distinct advantage over limited-line or single-line companies because they could average their big cars with their small cars instead of having all cars meet one standard.

Robert Dewey of the Center for Auto Safety called the CAFE standards the "most successful energy conservation program ever enacted" and promised strong opposition to any repeal effort.

Fred Smith of the Competitive Enterprise Institute welcomed the Administration's return to "focusing on economic deregulation" and described it as a promise to "restore an element of competition to the U.S. auto industry."

Other areas given tentative go-aheads in the task force's first meeting were: completing the job of deregulating the interstate trucking industry, abolishing the Interstate Commerce Commission and reforming bank regulations.

Title-wash plan may trap 60 in odometer case

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

As many as 60 East Coast used-car dealers could be charged with odometer tampering now that the operator of a Pennsylvania title-washing service has agreed to help with the probe.

Debra L. Blatz, 29, pleaded guilty last month to reduced charges in exchange for her cooperation. She has begun giving information on the dozens of wholesale and retail used-car dealers who did business with her, state and federal officials said.

Charged earlier this month was James J. Pettinato, 37, owner of Clifford Car City, Clifford, Pa. He faces 29 federal felony counts for allegedly using Blatz's service to obtain clean titles on cars that had rolled-back mileage readings.

Authorities said Blatz's operation typically worked like this:

Dealers who had bought high-mileage cars would give the titles to Blatz, who would change the mileage listed on the title to a figure requested by the dealer.

Blatz then would send the titles to associates in Virginia or Florida, who would use the altered titles to obtain new titles in those states. When the Virginia and Florida titles came back through Blatz to the dealers, they would obtain "clean" titles in Pennsylvania.

As many as 3,000 titles may have been laundered through Blatz, said Sally A. Lied, an assistant U.S. attorney for the Middle District of Pennsylvania.

Blatz typically charged about $175 for the service, Lied said. Blatz ran the operation, called DLB Business Consultants, from a desk she operated at the Manheim Auto Auction, near Lancaster, Pa., officials said. The auction has not been accused of any wrongdoing.

In making the deal, authorities dropped 24 charges against Blatz in exchange for a guilty plea on one count of conspiracy, three counts of making counterfeit or forged securities and three counts of interstate transportation of falsely made, forged or altered securities.

State and federal authorities are recommending a three-year prison term for Blatz. Sentencing has been set for Jan. 20.

Blatz also agreed to pay $1,500 for each of the 15 titles the indictment accused her of laundering, a total of $22,500. She was indicted last May.

Pettinato is the 12th person charged in the case, including Blatz. Six suspects have been convicted and two have been sentenced in Pennsylvania; five have been convicted and sentenced in New York and Virginia.

The probe, which began in January 1985, is being conducted by the FBI and the Pennsylvania attorney general's Bureau of Criminal Investigation.

New process may assist makers in war on smog

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A new chemical process using cyanuric acid may help eliminate smog. Cyanuric acid is a harmless compound often used as a chlorine stabilizer for water in swimming pools.

The process was discovered by Dr. Robert A. Perry and Dr. Dennis L. Siebers working at the Combustion Research Facility in Livermore, Calif., which is operated by Sandia Laboratories for the U.S. Energy Department.

Perry found that by allowing hot exhaust gases to pass over cyanuric acid, the exhaust's nitrogen oxides — the precursors of smog — are removed.

Perry's new process is named RAPRENOx, an abbreviation for rapid reduction of nitrogen oxides. Working with Siebers, he made lab tests on part of the exhaust from a single-cylinder diesel engine and found 99 percent of the NOx was removed.

According to Dr. Peter L. Mattern, new director of the Combustion Research Facility, an added benefit of this work is that it decouples the control of NOx and control of diesel particulates. Traditional control methods produce a seesaw effect: As NOx is controlled, particulates increase, and as particulates are reduced, NOx increases. RAPRENOx might make it possible to control particulates in the engine during combustion and control NOx outside the engine.

The Perry-Siebers work was funded by two programs operated by the Energy Department, which has formally waived its title to the invention in favor of Perry. The Energy Department retains the right to use the process without paying any license fees. Perry plans to leave Sandia and form a company to develop the process commercially.

Perry and Siebers believe they have a cheap and effective process for broad application — coal-fired powerplants and industrial boilers as well as engines. They say it has "important implications for a wide spectrum of energy conversion technologies and for industrial applications. . . ."

Sandia spokesmen noted, however, that the RAPRENOx concept is still undergoing confirmatory testing. The technology — including engineering research, the development of chemical devices that could be fitted to commercial engines and studies of performance under actual driving conditions — does not yet exist.

Navigation system expected as option on '89 GM cars

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors plans to offer an on-board computer navigation system as an option on 1989 models, according to National Car Rental System Inc. National is using the system on 15 GM vehicles it is operating in the San Francisco area.

A GM spokesman in Washington said GM does not comment on future product plans.

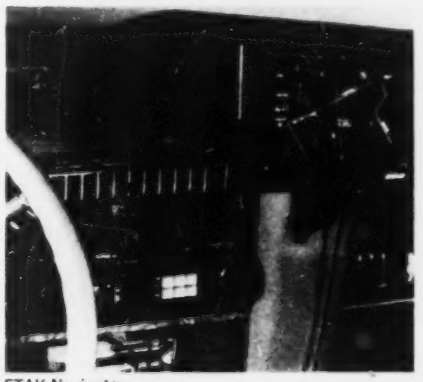
The navigation system, called the ETAK Navigator, is self-contained. It continually displays on a small television screen a map showing the location of the driver's car and the driver's destination.

The ETAK Navigator makes use of moving maps to help drivers find their destinations. As the car moves, the map is updated and recreated on the screen each second.

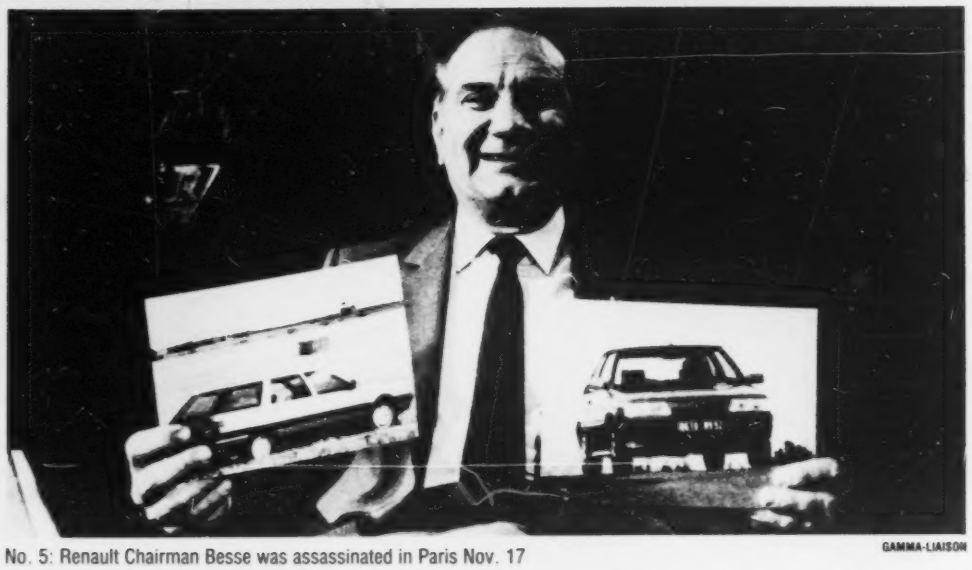
The system is the creation of ETAK Inc., a California company that was formed in 1983. National Car Rental said it became involved with the program through its relationship with GM. ETAK reportedly has a licensing agreement with GM.

In Washington, GM said its Research Laboratories and Delco Electronics have worked to develop the system.

The ETAK Navigator uses an orientation system consisting of motion sensors mounted on the front wheels and an electronic compass in the rear window. A shoe box-size processor fits in the trunk and contains the computer. A tape drive, which accepts maps recorded on special tapes, can be placed anywhere in the passenger compartment, but is usually located under the driver's seat. A four-inch display screen is attached to the front of the instrument panel.



ETAK Navigator



GAMMA-LIAISON

No. 5: Renault Chairman Besse was assassinated in Paris Nov. 17

realized that it was silly to buy a car between incentive programs — wait a while and save a bundle. So the low-interest-rate offers continued.

There's another problem. Incentive programs are expensive for the manufacturers, so they raise prices to defray the cost. But the higher prices stifle sales, and that leads to more incentives. And the new incentives also are expensive, which means another price hike. And around and around and around.

Maybe the chain is about to break. The current round of cut-rate loans and rebates is slated to end in January. GM isn't playing the finance-rate game this time (although it is offering a $300 rebate on Chevrolet Cavalier). Said one observer, "If GM can hold out, maybe the industry will get back to selling cars instead of paper."

No. 4: The rising yen

Despite their increasing share of the U.S. market, all is not well with the Japanese automakers. The appreciation of the yen against the dollar is causing severe profit problems. That was the fourth-place story in the 1986 poll.

In mid-1985, the exchange rate was about 240 yen to the dollar. Today, it's a bit over 160. Thus, the yen has risen about 50 percent against the dollar. During that period, prices of Japanese cars in the United States have gone up about 18 percent.

That means the Japanese are making a lot less money on their U.S. business. Japan's auto industry is an export industry, and the United States is its prime market. The result is a serious profit pinch.

In the six months ended June 30, the first half of its fiscal year, Nissan suffered its first operating loss since going public in 1951. Toyota's profits were down 15 percent for the fiscal year ended June 30, and Honda's profits were off 44 percent for the six months ended Aug. 31, the first half of its fiscal year. Mazda's profits fell 55 percent in the first half, ended April 30.

No. 5: Besse murdered

The murder of Renault chief Besse was the No. 5 story in this year's voting. Besse was gunned down outside his Paris home Nov. 17. Action Directe, a French left-wing extremist group, claimed responsibility for the killing.

Besse, 58, had headed the state-owned automaker for 22 months. He came from Pechiney, France's nationalized aluminum and chemical firm. He took over that company in 1982 and returned it to profitability in two years.

And he was making progress at Renault. Under Besse's cost-cutting programs, the company was trimming its losses and was improving its share of the market. He expected Renault to be in the black by the end of 1987. And some said it had already turned the corner at the time of his death — forecasting a profitable fourth quarter for Renault this year.

In mid-December, Raymond H. Levy, 59, was chosen to head Renault. He formerly was chief of Cockerill-Sambre, Belgium's state-owned steel group. Like Besse, he has a reputation for ministering to sick companies.

The 1986 rundown

Here are the leaders in the 1986 Story of the Year poll:

1. A time of turmoil at GM: Market share dips; plants to close; Saturn scaled back; plastic-bodied Camaro-Firebird dropped; bus operations for sale; Volvo to run heavy-truck venture; company has third-quarter operating loss of $338 million. (139 points, 18 first-place votes)

2. The Ross and Roger show: Perot snipes at GM and Smith. GM pays Perot and his top aides $750 million for their Class E stock and for "contingency fees;" removes Perot from GM board and removes him as chairman of EDS. (96 points, eight first-place votes)

3. Incentives: Cut-rate loans in news throughout year as domestic makers try to hype stale market. GM drops to 2.9 APR for 1986 cleanup; Ford matches it; Chrysler offers 2.1 percent; AMC, zero percent. September sales set record. (69 points, three first-place votes)

4. Rising yen means problems for Japanese automakers. Nissan has operating loss for first half. Toyota profits down 15 percent for fiscal year ended June 30. Honda profits down 44 percent for first half ended Aug. 31. (42 points)

5. Georges Besse, Renault chairman, murdered in in Paris by terrorist group. (28 points, one first-place vote)

6. Hyundai's success: Car goes on sale in United States in February with goal of 100,000 sales for first year. It may double that figure. (23 points)

7. Ford profits top GM's for first nine months of 1986; maybe for full year. (20 points)

8. (Tie) Prices rise on Japanese cars as yen appreciates in value. Four leaders up an average of $1,331, or 13.87 percent, during 1986 model year. Ford and GM rise prices, too, failing to capitalize on Japanese problem. (11 points)

8. (Tie) Car-truck sales expected to set record of 16 million for 1986 calendar year. (11 points)

8. (Tie) More transplants: Fuji-Isuzu to build in Indiana; GM-Suzuki to build in Canada; Honda starts assembling in Canada, adds Civic and engine plant in Ohio. (11 points)

11. New Taurus and Sable a big success for Ford Motor Co. (11 points)

Other stories mentioned in the voting were: Audi's runaway-car problems; Chrysler to build cars in AMC plant; Ford and VW merge operations in Brazil and Argentina; Ford loses Alfa Romeo to Fiat; Detroit-area dealers tried on FTC charge of conspiring to limit sales hours; and Roger Smith calls for stricter quotas on Japanese car exports to the United States.

SALES

FROM PAGE 1

will decline, the research group said.

DRI-Europe predicts volume of 11,236,000 cars in Western Europe next year, compared with 11,292,000 in 1986. The group projects an upturn in sales to 11,471,000 in 1990.

North American sales — expected to reach 12,322,000 million in 1986 — will fall to 11,927,000 next year and build to 12,657,000 by the end of the decade, according to the forecast.

DRI-Europe expects "only a small fall" in the U.S. car market, from 11.3 million units this year to 10.9 million in 1987. However, it looks for sales by U.S.-based manufacturers to decrease about 8 percent as new imports from Korea and Brazil push up the U.S. import total.

The research organization predicts that imports will rise to 3.8 million units by 1991, including cars imported by U.S.-based companies. Based on a projected U.S. market of 11.8 million cars that year, imports would hold a 32 percent share, compared to 26.5 percent in 1985.

The Japanese market is expected to rise slightly, from 3,195,000 cars in 1986 to 3,242,000 next year and 3,366,000 in 1990.

DRI-Europe said the sales rankings of Europe's top six automakers will undergo a continuous shakeup in the next few years.

Renault, which has fallen from first place to sixth since 1983, is prime for a turnabout, while Fiat Auto — with Alfa Romeo included — will challenge Volkswagen Group for first place, DRI-Europe said.

Meanwhile, the Japanese are weighing strategies in the face of growing pressure for restrictions. A key issue is how Toyota will respond to the establishment of manufacturing bases in Europe by Nissan and Honda.

"Although Volkswagen's lead in Europe will only be challenged by the enlarged Fiat Group, the other four positions among volume manufacturers will fluctuate almost continuously over the next few years," DRI-Europe said.

Through November, VW-Audi-Seat was the European leader with 14.5 percent of the car market. Fiat (with Alfa's 1.5 percent included) held 14.1 percent; Ford, 11.8 percent; Peugeot SA, 11.3 percent; General Motors, 11.1 percent and Renault 10.3 percent.

Renault's share fell to 9.9 percent last summer, but has been rising steadily since then.

"Renault is set to make a recovery in 1987," DRI-Europe said. "This will be mainly because of the new R-21, which is currently selling very well in France and will thus boost its European sales significantly."

But DRI also said that Renault's French adversary, PSA, will derive continued sales strength from its Peugeot 309, while the Citroen AX offers stiffer competition for subcompact competitors as it becomes more widely available throughout Europe in 1987.

DRI said Ford's facelifted Sierra and Volkswagen's new Passat will have an impact on the market. The re-skinned Sierra sedan is due to bow in early 1987, while reports are that the Passat's introduction has been delayed and will not take place before early 1988.

The Sierra is expected to impact Opel Ascona/Vauxhall Cavalier sales, while the new Opel Omega/Vauxhall Carlton enhances GM's penetration of the European executive segment against the likes of Ford Scorpio/Granada, Renault 25 and Fiat Croma/Lancia Thema.

Fiat, now heavily dependent on the Uno and Panda outside Italy, will get help from the new Type 2/3 models in the lower medium segment duing the next three years as well as from the Brazilian-built Duna, a sedan version of the Uno that will be shipped to Europe at the rate of 60,000-80,000 annually beginning next year.

This year, the Japanese have focused heavily on Europe, where the yen has not appreciated so dramatically against local currencies. But the resulting criticism from European manufacturers has led to self-imposed export restraints, which have recently begun to have an impact on Japanese volume.

DRI said current restrictions favor Nissan — the Japanese sales leader in Europe — because they exclude Nissan production at its new plant in the United Kingdom.

There have been reports out of Tokyo recently that Toyota favors a joint manufacturing venture in Europe similar to its New United Motor Manufacturing Inc. partnership with General Motors in the United States.

Automotive News soothsayers predict sales drop

DETROIT — The Automotive News editorial staff sees a downturn in car and truck sales in 1987 — about 15.25 million compared with the record 16 million expected for this year.

The car sales forecast is 10,650,000, down from an anticipated 11,260,000 for 1986.

The staff predicts that sales of U.S.-built cars will drop to 7,361,000 in 1987, down from 8,060,000 this year. Sales of imported cars are seen rising to 3,289,000 from this year's 3,200,000.

The truck sales forecast is 4,604,000, down from about 4,800,000 in 1986.

The forecast is based on the averages of estimates submitted by Automotive News reporters and editors.

Spain rides crest of sales tsunami

By Richard Johnson

After a decade of stagnation, Spain has emerged as Europe's fastest-growing new-car market.

Consumer confidence inspired by lower interest rates, reduced inflation, political and social calm, and entrance by Spain into the Common Market have overcome the effects of a steep new value-added-tax on autos.

All told, about 100,000 more cars will be sold this year in Spain than last year.

"The rate of growth has been quite spectacular," observes Eddy Van Loo, marketing director of General Motors Espana S.A., which has boosted sales sharply this year.

Actually, expansion of the Spanish new-car market is long overdue. The industry surpassed the 500,000-mark more than 10 years ago and achieved record volume of 633,000 in 1977.

"The industry in Spain has been very disappointing over the last 10 years," notes Alain Batty, Ford Espana S.A. marketing director. "It had already reached a half-million and forecasts were it would grow to at least a million cars by 1990. But it's remained at 500,000-600,000."

The real push in Spain began about mid-year. Industry sales rose 25 percent in October — best among the 17 major West European markets — after increases of 32 percent in September and 34 percent in August.

Spain recently passed The Netherlands to move into fifth place in car sales among European countries. The top four are West Germany, United Kingdom, Italy and France.

Spain's rate of increase in October was more than three times that of Western Europe as a whole, where sales were up 7.5 percent for the month.

Spain's 17.7 percent improvement in 1986 over 1985 is highest among the 17 major markets. Sales in Spain in January-October (549,800) compared to 467,000 in the same period last year. Industry officials in Spain predict 1986 will wind up with sales at an all-time high 675,000 units, and they forecast 700,000-750,000 units in 1987.

Leading the surge in Spain are Ford and GM, both of which have production bases there.

Ford's Spanish sales rose 63 percent in October after gains of 27 percent in September and 55 percent in August. Sales for the 10 months (77,900) are 23.7 percent above last year. The company's Spanish-built Escort/Orion subcompact twins shot up 113 percent in October and are running 48 percent ahead of last year with 10-month sales of 48,000.

GM's volume, up 52 percent in October, ran 34 better than last year for 10 months at 76,900 units. The locally produced Corsa leads with total sales of about 54,000 expected for 1986.

Both companies figure to eclipse the 100,000 mark for the first time in Spain this year. However, Ford and GM are fourth and fifth behind Renault, Volkswagen Group and Peugeot S.A. in the total market.

According to GM's Van Loo, the Spanish economy has rebounded for a number of reasons, including stable energy prices, a significant drop in interest rates since the end of 1985, and a sense of confidence arising from Spain's commitment this year not only to the Common Market, but also to renewed membership in NATO. "This country is now definitely a part of Europe," says Van Loo.

The re-election of Prime Minister Felipe Gonzalez Marquez and his government this year also has helped foster an atmosphere for economic recovery, according to Van Loo. "The victory provided not only political stability, but also brings a kind of social peace," he says. "This is very important for the economy. It leads to a climate of confidence."

Notes Ford's Batty: "The political stability in Spain is a good factor. There is real good social ambience."

He also cites lower fuel prices and general economic vitality as springboards for robust Spanish sales. "There's a lot of money coming back into the market and being spent on consumer goods," he says.

Some observers say demand is heavy in Spain because consumers are anticipating the next round of inflation. Van Loo also notes that pent-up demand for replacement cars, built up in recent years, is now being fulfilled.

Spanish sales have continued unabated this year despite the addition of a value-added-tax adopted as a provision for joining the European Economic Community. The 33 percent VAT tax on cars has drawn criticism from automakers, but apparently has done little to dampen sales.

Says Batty: "The value-added tax didn't have a real impact because we previously had two or three different taxes which were more or less equivalent."

Spanish market leader Renault, with sales of 145,400 units and better than a 26-percent share through October, is running 3 percent ahead on the year. VW Group, helped by acquisition of Spanish carmaker Seat, is 13 percent ahead of 1985 with sales of 109,300. Seat sales in its home market are 19 percent better than last year at 67,800. PSA's 10-month volume of 87,000 is 4 percent above last year.

Japanese producers, virtually excluded by the Spanish government, are unable to participate in the expanding market.

Japan's automakers sold 3,400 cars through October, the same level as in 1985.

West Germany continued to pace Western Europe in new-car sales through the first 10 months of 1986. The West German car market was 16.1 percent ahead of 1985 through October with total volume of 2,375,400, according to industry sources compiled by *Automotive News*.

The United Kingdom was second-best through 10 months, with sales of 1,675,000 topping last year by 2.5 percent. Italy, with 10-month volume of 1,570,700, was up 4 percent over 1985. In France, sales of 1,547,500 units in 10 months were 5.7 percent ahead of last year. ■

NEW CAR SALES IN EUROPE

Country	10 mos. 1986	Pct. gain or loss from 1985
West Germany	2,375,400	+ 16.1
United Kingdom	1,675,000	+ 2.5
Italy	1,570,700	+ 4.0
France	1,547,500	+ 5.7
Spain	549,800	+ 17.7
Netherlands	517,900	+ 14.8
Belgium/Lux	382,200	+ 11.1
Switzerland	267,000	+ 14.8
Austria	231,100	+ 4.0
Sweden	219,400	– 1.0
Denmark	157,300	+ 16.3
Norway	149,100	+ 12.3
Finland	126,600	+ 4.8
Portugal	86,100	+ 15.9
Ireland	54,600	– 1.7
Greece	50,400	– 25.1
TOTAL	9,996,100	+ 8.5

Although Ford ranks only fourth in the total Spanish market, sales of its Orion (above) and Escort have jumped astronomically. Sales of the twin subcompacts in Spain are running 48 percent ahead of last year.

WORLD NEWS BRIEFS

AR workers accept pact

Hourly workers at Austin Rover Group agree to terms of a two-year wage package recommended for adoption by union leaders. The pact, running through November 1988, covers 26,000 workers at AR facilities in Britain. Approved by a vote of better than 2-1, it includes 3-percent wage hikes annually plus quality and productivity bonuses.

Avis orders from AR

Austin Rover lands an $18 million order from Avis Rental Car Division in the United Kingdom. Avis will buy at least 2,500 AR cars, with delivery beginning in January.

The ball's in Opel's court

General Motors' Adam Opel AG signs a three-year agreement with the International Tennis Federation and European Tennis Association to sponsor several events. The West Germany-based automaker obtained exclusive car industry advertising and promotional rights for the Davis Cup, Federation Cup, Women's National Team Championship, World Youth Cup (for players under 16) and Opel European Cup (European indoor team championships).

Daimler, Kloeckner unite

Daimler-Benz and Kloeckner-Humboldt-Deutz of West Germany agree to cooperate on production of tractors and agricultural machinery. They will establish a new company based in Cologne and held 60 percent by Kloeckner, 40 percent by Daimler. The company will develop four-wheel-drive models ranging from 70 to 200 horsepower. Daimler and Kloeckner also will form a joint sales company based in Gaggenau, West Germany, for Daimler's MB-Trac and KHD's Intrac models.

Big rigs go aero

The U.K.'s Leyland Trucks launches a joint aerodynamic research project with trailermaker Crane Fruehauf. They will investigate possible reductions in wind drag on big rigs. The companies already have subjected a standard Leyland Roadtrain and Crane Fruehauf box-van semi-trailer to wind tunnel research. Modifications based on initial results are undergoing road tests.

Jags in department stores

Jaguar automobiles will be marketed in Japan through a new joint venture between Jaguar Cars and Seibu Department Stores of Japan. Showrooms will open in Tokyo and Osaka. Seibu owns 60 percent of the venture, Jaguar 40 percent. The joint company expects to sell 600 cars a year starting in 1987, with volume rising to 2,000 annually by the end of the decade. Until now Jaguars have been sold in Japan through Austin Rover outlets.

Saarlouis hits milestone

Ford-Werke AG's plant in Saarlouis, West Germany, produced its 4-millionth car, a white Ford Orion, on Nov. 24. The plant was officially opened in June 1970 by Henry Ford II. It once built U.S. and European versions of Fiesta and some Capri models, but now produces only Escorts and Orions.

Ford redoes racer

A new Benetton Ford Formula One car will use a turbocharged Ford 1.5-liter V-6 engine from Cosworth Engineering for the 1987 racing season. The car, now in the design stage, will be driven by team drivers Teo Fabi of Italy and Thierry Boutsen of Belgium.

Bulldozers head for Russia

Fiat-Allis, machinery subsidiary of the Italian group, signs a deal to supply more than 250 bulldozers to the Soviet Union, according to Tass, official Soviet news agency.

Seats for Diamond-Star

Douglas & Lomason Co., Farmington Hills, Mich., and Namba Press Works Co. Ltd., Kurashiki, Japan, form a joint venture to produce trimmed complete seating for Diamond-Star Motors. The venture, called Bloomington Seating Co., will operate a plant in Normal, Ill., near Diamond-Star's new car-assembly plant.

Fiat takes stake in bank

Fiat Group purchases a minority stake in Italian bank Credito Romagnolo. Fiat paid the equivalent of about $27 million for a 2-percent stake in the Bologna-based bank.

Sicot departs Ford

Robert Sicot, manager of European press relations and governmental affairs for Ford of Europe since 1968, announces he will leave the company Jan. 1. The 59-year-old Sicot plans to continue his public relations career as an international communications consultant for the automotive industry. ■

PRODUCTION

'86 auto output dips

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Estimated production of 7,734,489 cars in 1986 was down 3.93 from the 1985 running total of 8,050,518. Auto plants ended production for the year last Tuesday (Dec. 23).

Showing production gains this year (estimated totals) over 1985 are: New United Motor Manufacturing Inc., 193,362, more than triple last year's 58,139; Honda of America Manufacturing Inc., 233,440, up 63.99 percent from 142,349; Nissan Motor Manufacturing Co., U.S.A., 63,061, up 47.70 percent from 42,695; Ford Motor Co., 1,747,471, up 8.83 percent from 1,605,595; and Chrysler Motors, 1,284,085 up 3.30 percent from 1,243,051.

Preliminary figures indicate calendar-year production declines from 1985 for: American Motors, 48,336 down 55.68 percent from 109,082; General Motors, 4,082,387, down 14.14 percent from 4,754,916; and Volkswagen of America, 82,347 down 13.03 percent from 94,691.

With no overtime and only two working days because of the holidays, last week's targeted domestic auto production dipped considerably from the prior week's output.

Automakers' estimated build of 68,481 was down 61.54 percent from the previous week's 178,068. There was no production during the year-ago week due to the Christmas holiday.

Last week's scheduled auto output was shared as follows: GM, 53.70 percent; Ford, 26.09 percent; Chrysler, 11.97 percent; Honda, 2.91 percent; NUMMI, 2.45 percent; Nissan, 1.71 percent; and VW, 1.17.

AMC's Kenosha, Wis., plant was idle for inventory adjustment last week. The plant is scheduled to resume production Jan. 5.

1986 truck build up 2.3 percent

As production for the year ended last Tuesday (Dec. 23), the estimated domestic truck output for 1986 totaled 3,483,534, an increase of 2.25 percent over the running total of 3,406,855 for 1985.

Preliminary 1986 production increases over 1985 were reported by: Ford Motor Co. — 1,371,173 units, up 14.89 percent from 1,193,437; Nissan Motor Manufacturing Co. — 106,783, up 1.59 percent from 105,106; and GMC — 355,098, up 1.29 percent from 350,547.

Production decreases were posted by: Dodge — 150,068, down 28.59 from 210,150; Jeep — 187,917, down 18.11 percent from 229,475; Chevrolet — 1,125,441, down 2.15 percent from 1,150,231; and Navistar International — 71,788, down 0.94 from 72,476.

Assembly plants are scheduled to resume production Jan. 5.

'86 Canadian production drops

Canadian carmakers' and truckmakers' preliminary 1986 calendar-year totals fell below the running totals for 1985.

Estimated truck production for 1986 was 770,801, 8.63 percent below the 1985 total of 843,588.

Last week's two-day truck output, scheduled at 5,404 units, was 61.81 percent below the previous week's 14,149. There was no production during the year-ago holiday week.

Estimated auto production for 1986 was 1,056,145 units, 2.68 percent below the 1,085,209 completed in 1985.

Production of 9,797 cars last week was 60.65 percent below the previous week's 24,896.

General Motors' Ste. Therese, Quebec, plant will be idle for inventory adjustment the week of Jan. 5. The plant will resume operations Jan. 12.

Output at all other assembly plants is scheduled to resume Jan. 5.

Gray market wins a bit in Texas case

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Texas law regulating titling of gray-market vehicles has been upheld, for the most part, by the Fifth Circuit Court of Appeals in New Orleans.

The court said direct importers no longer have to obtain EPA documents. But they still must have Department of Transportation approval of the vehicle's safety compliance, and they must have a letter from DOT to the U.S. Customs Service releasing the vehicle from bond before they can secure a title to the vehicle.

While the appeals court decision is not exactly what the gray-marketers wanted, a NHTSA spokesman told Automotive News that the approval process now takes only 1-2 weeks. In the past, a delay of several months by DOT was common.

A spokesman for the Automobile Import Compliance Association said the shorter wait is, in part, because gray-market imports have dwindled to about 1,000 a month because of less-favorable foreign exchange rates.

The Direct Automobile Imports Association, the Texas gray-market organization, challenged the Texas law in June 1985. For issuance of a title, the law required approval from EPA for compliance with emission standards and a bond-release letter as well as parallel documents from DOT.

The association said the Texas law was invalid because both the Clean Air Act and the vehicle safety law pre-empted state law. In addition, it charged that the Texas law violated the commerce clause of the U.S. Constitution by interfering with interstate commerce.

Gray-market vehicles are those not originally intended for sale in the United States and imported either by agents or consumers directly. Federal regulations require that they conform to safety and air-pollution standards before they can be sold and titled. The importer must post a bond in an amount at least equal to the vehicle's value before making any changes.

EPA requires testing by a laboratory "recognized" by EPA before it will release the gray-market vehicle from the Customs Service. DOT requires an approved statement of compliance before it will release the vehicle from bond.

The gray-market group won a federal district court decision which said state law was pre-empted by both the air pollution and the safety laws. Since that was enough to grant a preliminary injunction, the court never decided the constitutional question.

The three-judge appellate court has now agreed in part and has sent the case back to the lower court to lift the preliminary injunction. It ruled that the Clean Air Act clearly pre-empts state law, but found the Texas law is not pre-empted for safety standards.

In the unanimous opinion, Judge E. Grady Jolly said the Texas law "does not require importers of gray-market automobiles to take any steps that federal law did not already require them to take."

A similar case involving a Florida gray-market law brought by the individual importer and the Florida Import and Compliance Association is pending.

800,000 drop seen in domestic sales

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A flat economy and more import buying in 1987 will wipe out 800,000 sales of U.S.-built cars, the U.S. Commerce Department forecasts.

Commerce's annual economic report said sales of U.S.-built cars will decrease by about 10 percent this year to 7.05 million units, compared with estimated 1986 sales of 7.85 million.

U.S. Auto Sales Estimates, 1986-1990
(Thousands of vehicles)

Year	Domestics	Imports	Total	Import share (%)
1986	7,850	3,105	10,955	28.34
1987	7,050	3,650	10,700	34.11
1988	7,025	3,875	10,900	35.55
1989	7,110	3,990	11,100	35.95
1990	7,135	4,165	11,300	36.86

Source: U.S. Department of Commerce: International Trade Administration, estimates and forecasts by ITA.

Imported cars will capture 34 percent of the market in 1987, up from the 28 percent share they won in 1986, the department estimated. The import prediction is 3,650,000 in 1987 vs. 3,105,000 in 1986.

The forecast said total new-car sales in the U.S. will dip to 10,700,000 in 1987 from 10,955,000 in 1986.

The Commerce Department forecast is based on the assumption that U.S. economic growth will continue at current levels in 1987, that interest rates will remain at or below present levels, that there will be only a modest increase in fuel costs, and that the Japanese government's restraints on car exports to the United States will be eliminated March 31, 1987.

The department said the new-car sales outlook for the rest of the decade is more favorable. Sales will increase to 10.9 million in 1988, rise to 11.1 million in 1989 and reach 11.3 million in 1990, the department said.

Sales of domestic-built vehicles will firm up over the longer term but will continue to lose market share to imports, the department believes. Sales of U.S.-built models should be 7,025,000 in 1988, 7,110,000 in 1989 and 7,135,000 in 1990, the department said.

The government analysis attributes the future stability of sales of U.S.-built cars to new U.S. capacity being added by both U.S.-owned and foreign-owned firms. Much of the new capacity being added is either Japanese-owned or joint

Dealers from across the country said December sales gains were typically about 20 percent

BOOM: *Year-end tax writeoff is top reason for December's busy showrooms*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

When the time comes to hand out credit for the triumphs of 1986, the nation's auto dealers may be obliged to send thanks to the writers of the new U.S. tax code.

Dealers expected the loss of certain tax breaks after 1986 to set off a flurry of year-end buying. And judging by responses from those interviewed by Automotive News last week, most dealers weren't disappointed.

"I hope December doesn't end," said Jack Rockwell, owner of Whittier Chrysler-Plymouth in Whittier, Calif. "This is the best December I've ever had, and I've been in this business for 25 years."

Rockwell said he expected to sell more than twice as many cars in the month as he did in December 1985. And while other dealers couldn't match his performance — and some in fact were discouraged by their sales numbers — those who prospered in December said the new tax law had much to do with their success.

Dealers from across the country said they expected to see December sales range from flat to Rockwell's 100-plus-percent increase, with gains typically in the 20 percent range.

To car shoppers, the logic behind buying was simple. If they were ready to spend $25,000 on a new car and lived in a state with a 7 percent sales tax, they could trim $1,750 from their 1986 taxable income if they bought before Jan. 1, 1987 — when the writeoff disappears. Other provisions of the tax law, such as reduced interest deductions and extended depreciation schedules, also provided incentives to buy before the year ended.

Like other dealers, Rockwell said most of his sales were concentrated in his top-of-the-line

Chevrolet Corsica price set at $8,995

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet introduced its most important cars since 1955 last week, and division officials believe the Corsica and Beretta are priced to capture at least 500,000 buyers a year.

The base price of the Corsica sedan is $8,995; the base price of the Beretta coupe is $9,555. The cars went on sale Jan. 2 and were displayed at the Los Angeles auto show, which opened Jan. 3.

Robert D. Burger, Chevrolet general manager, called the Corsica and Beretta as important to the future of Chevrolet as the 1955 Chevy was to its generation. The 1955 Chevy was a completely restyled model with the division's first V-8 engine.

"Corsica and Beretta are more than just two new cars," Burger said in prepared remarks. "They are Chevrolet's statement of how the customer has redefined the compact car."

In terms of price, the new models, exclusive to Chevrolet, fall between the Cavalier and Celebrity in the division's product line. The division considers the models compacts, which fill a void left from the discontinuance of the publicity-plagued X-car, the Citation.

"We're confident these prices put Corsica and Beretta in a good competitive position against both the domestic and imported compacts," Burger's Los Angeles remarks said.

New chief says company must play by world rules

By Jean-Jacques Renaux
SPECIAL CORRESPONDENT

BRUSSELS, Belgium — Following the lead of his assassinated predecessor, new Renault Chairman Raymond Levy believes the state-owned French automaker must live by the rules of a competitive world industry.

"There is no choice for Renault," Levy told Automotive News in an exclusive interview, his first since succeeding Georges Besse at the Renault helm. "Being in the free market, Renault will succeed by playing by the rules of the game or it will not succeed. There is no alternative."

Levy, cleaning up loose ends at his old job in Belgium before moving to Renault in Paris, was responding to questions about the possible privatization of all or part of Renault — an idea given greater credibility by recent remarks on French national television by Industry Minister Alain Madelin, who contends it is not the job of the state to build cars.

But after only a few days at Renault, Levy was reluctant to make any specific pronouncements about how he will run the group and its North American affiliates, American Motors and Mack Trucks.

One thing was strikingly clear, however. Levy's answers to questions about his business philosophy reiterated what many had believed — that he is a man in the mold of his old friend Besse, who was assassinated in Paris Nov. 17.

JEAN GUYAUX

Levy: A man in the mold of his old friend, former Renault Chairman Besse

The new chairman would not be drawn into specific issues, saying, "I cannot talk about it so soon, I don't know the company well enough. . . . Don't forget, I have spent only 48 hours at Renault so far. It's not much, two days' work."

It had taken less than 48 hours after Besse's death for Madelin to contact Levy in Brussels, and ask whether he would become head of the troubled car group.

Honda adding automation to hike efficiency

By Richard Feast
AUTOMOTIVE NEWS STAFF REPORTER

Honda Motor Co. is well advanced with a program designed to triple the company's production efficiency in just over two years.

By adding greater automation in the area of final assembly and creating a more flexible production system, Honda officials believe the automaker will also be able to lift capacity without increasing the number of people it employs.

All Japanese exporters are having to review their strategies in the wake of the strengthening yen. Honda, which derives almost 70 percent of annual revenues ($16 billion in 1986) from overseas sales, believes the yen could rise to 120 to

Oil slump perils Okla. dealerships

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Dealers in Oklahoma, where the economy has been wracked by sagging oil prices and continuing farm troubles, may seek help from the automobile manufacturers whose cars they sell.

W. C. "Mac" McCullough, an Ardmore, Okla., Cadillac dealer and National Automobile Dealers Association director, said NADA will conduct a dealer survey on business conditions in the state. The results will help dealers decide what to do — and that might include soliciting financial help from manufacturers.

The dealers especially need help with the cost of floorplanning and insurance, McCullough said.

"Business has been horrible here," McCullough said, adding that he sees little promise for improvement in 1987.

"We're afraid," he added. "It doesn't look too good."

Dealers in Oklahoma, as well as those in neighboring oil-producing states, say Oklahoma is in the worst economic shape of any area in the country. Low oil prices have put a halt to oil drilling, which has caused high unemployment, bank collapses and bankrupt businesses. All of that is in addition to the poor economic condition of the state's farmers.

"It's a double whammy for us," said John Conner, executive vice president of the Oklahoma Automobile Dealers Association.

Some Oklahoma dealers have sold out to larger, stronger dealerships; others have simply closed their doors and a few have filed for bankruptcy, he said. The state dealer association lost 8 percent of its membership in 1986. Membership totals 370 dealers, down from an all-time high of 515 12 years ago.

Conner said the fleet business is virtually gone and small towns have been especially hard hit. He mentioned one town that until recently had seven car dealers and a truck dealership. Today, the truck dealership is gone, and the car franchises have been consolidated into three dealerships.

Even dealers in neighboring Texas, similarly troubled by the slumping oil business, say Oklahoma is in worse shape.

Walter Wainwright Jr., president of the Houston Automobile Dealers Association, said 1986 car sales in Houston were off 20 percent from 1985. But dealerships are not closing and new points have opened, primarily for new makes such as Hyundai, Acura and Yugo.

As in Oklahoma, there has been consolidation of dealerships in Houston. Almost 10 percent of the association's 160 dealerships have changed hands in the last year, Wainwright said.

Express was developed to explore application of advanced technology

The Chevy of the future?

Express concept car designed for inter-city trips

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chevrolet will display the Express, a new research vehicle designed with high-speed travel between major metropolitan areas in mind, at this week's Detroit Auto Show.

The Express offers a glimpse of what Chevrolet thinks the car of the future might be like and what General Motors engineers must work on to build the Chevy of the future.

The Express will serve as a research vehicle to explore the application of advanced technology including expanded use of electronics, new structural techniques, advanced aerodynamics and new powerplant technology.

The idea for the Express was hatched in 1983 when GM decided to take a look at the viability of a high-speed vehicle for travel between metropolitan areas. GM wanted to expand the concept of high-speed air and rail travel by building a vehicle that could provide long-range travel as well as personal mobility once a person arrived at a destination.

GM decided its vehicle would cruise at a maximum speed of 150 mph and get 25 mpg. GM engineers figured such a future vehicle would probably operate in a limited access lane or on a separate high-speed roadway.

To meet those speed and mileage requirements, it was decided that the Express had to be aerodynamic and would be powered by an automotive gas turbine engine, which runs most efficiently when operating at a constant speed.

GM designers and engineers also decided that car-buying trends into the next century would show continued popularity of four-passenger vehicles.

Within those guidelines, the car was designed by the GM Advanced Concept Center in California and engineered by the Chevrolet-Pontiac-Canada Group's Advanced Engineering Department. Other GM units, including Electronic Data Systems and Hughes Aircraft, also helped in the development.

AUTOMOTIVE NEWS/JOE WILSSENS

Express' drag coefficient: 0.19

Advanced technology featured on the Express includes low-drag aerodynamics, with a drag coefficient of 0.19; body construction using new materials and architecture; a powertrain system that includes a turbine engine with unique exhaust characteristics, a specially designed transmission and unusual downforce characteristics; electronics including monitor displays for a view of what is behind the car, navigation system, keyless entry system, advanced lighting systems and convenience features; and a unique chassis configuration with a greenhouse canopy roof.

Chevrolet said that consumers won't likely see a turbine-engined Chevrolet in their local showroom soon, many of the concepts and systems being evaluated in the Express will be incorporated into Chevrolet products of the near future.

GM's Pontiac division also will unveil a new concept vehicle at the Detroit Auto Show but no details on the vehicle have been revealed. At last year's Detroit show, Pontiac introduced the Trans Sport, a people mover with car and van characteristics.

Job security

50 years after victory at GM, UAW looks ahead to '87 talks

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The UAW is looking back and looking ahead in these early days of 1987.

It is looking back as it marks the 50th anniversary of the sit-down strike at the Fisher Body plant in Flint, Mich., that won the union its first contract with General Motors and opened the door to agreements with all the automakers.

It is looking ahead as it prepares for the 1987 negotiations with GM and Ford Motor Co. — negotiations that are not likely to be marred by the violence of the 1930s, but talks that are every bit as important to the future of the union.

The major auto industry strikes and bargaining since the sit-down strike have won workers unprecedented gains. But a half-century after the Flint strike, the union again fears the rug could be yanked from under it. The UAW has reaffirmed that job security will be its top priority in the 1987 talks.

That means addressing the mushrooming problems of plant closings, outsourcing and subcontracting, and winning a stronger voice in the automakers' planning and decisions. UAW President Owen Bieber, who is a director of Chrysler Corp., has said that the union will seek representation on the GM and Ford boards as well.

Profit-sharing will be on the agenda and wages and benefits won't be ignored. But the major issue will be job security.

Sidney Fine, University of Michigan historian and author of "Sit-down," a study of the milestone Flint strike, said, "You could argue that job security and having some say in the company were issues from the beginning."

He said that in 1937, the union's demands for a seniority system and grievance procedures were attempts to achieve job security.

Fine said job security was further assured in early bargaining when automakers were forced to agree that "women couldn't be fired for not sleeping with the foreman."

Though the union wanted a say in working conditions, Fine said, it was content to let managers run the plants during the postwar boom years — in exchange for good wages and benefits.

"Once the industry began to recede — and I mean heavy industry in general — unions became unhappy with management" and wanted a voice in running the company, he said.

Since the formation of the union in 1936, the strike has been a key weapon in the UAW's strategy.

The historic Flint strike was kindled in the summer of 1936, when the UAW began organizing efforts in Flint. The auto workers had been thwarted in earlier attempts to organize GM plants.

At that time, Flint was "the heart of the GM empire," according to Warner W. Pflug, author of a history of the UAW.

The strike began at Fisher Body Plant No. 1 Dec. 30, 1936, when workers sat down and halted the shipment of dies to other areas. GM believed moving the dies would keep production going in the event of a strike in Flint.

Ten other plants eventually joined the strike, either through sit-downs or walkouts, and by Jan. 13, 1937, more than 112,000 of the company's 150,000 production workers were on strike.

The union secured Chevrolet Plant No. 4 in Flint — a vital facility — on Feb. 2, and on Feb. 11, 1937, GM agreed to a settlement that recognized the UAW as the representative of GM employees who were members. GM also agreed not to discriminate against union members and to rehire all strikers.

On March 12, 1937, a general agreement was signed that included a grievance procedure and layoff, trans-

Iacocca predicts good year despite earnings decline

Chrysler Corp. earnings will decline in 1987, but the automaker still expects profits to average at least $1 billion annually through the end of the decade.

"I don't see how we could do less than a billion dollars a year after taxes unless the roof caves in," said Lee A. Iacocca, Chrysler chairman, in published interviews last week.

Iacocca said model changeovers at two Chrysler plants during the first quarter, plus a potential 8-10 percent drop in industry car and truck sales could force 1987 profits below 1986's projected results.

The company also is expected to post 1986 earnings somewhat lower than its 1985 profit of $1.64 billion, but Iacocca said 1986 still was "a very, very good year."

Iacocca said Chrysler's long-term goal is to increase its share of the new-car and light-truck market to 15 percent from about 12 percent currently, but he added that the company's profit goals do not hinge on gaining market share. No dramatic increase in Chrysler's market penetration is expected near-term.

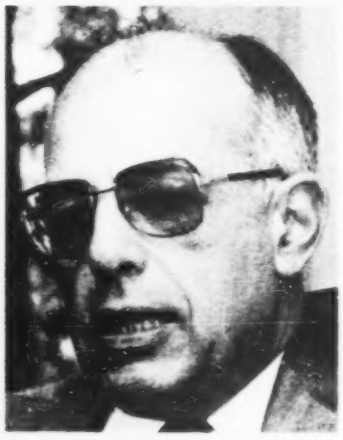
"Our market share will be fairly stagnant, about 12.5 percent of the combined car and truck market (in the United States and Canada)," Iacocca was quoted as saying. "But we are counting a lot on (profit) margin improvements."

Chrysler will introduce several new higher-profit models next year, including its LeBaron coupe and convertible, stretched minivans, C-body full-size cars and the Maserati luxury coupe.

The automaker will spend an average of $2.5 billion annually on capital improvements and new products during the next five years, Iacocca said. The biggest share of the budget will go for new light-truck programs.

Iacocca said Chrysler is continuing to look for a medium-sized composite materials or electronics company it could purchase for about $1 billion.

A decision on whether to build the Omni/Horizon at American Motors' Kenosha, Wis., plant or scrap the small cars must be made by Jan. 30, 1987, he said.



"The most important thing now is that Renault doesn't become content because it may have got back to the break-even point."

"For me, a state-owned group must be run just like a private company."

"I believe that, if it had been possible to find a successor to Georges Besse among Renault's management, it would have been better."

JEAN GUYAUX PHOTOS

LEVY

FROM PAGE 1

As Levy was tied by a five-year contract with the Belgian government to head the steel group Cockerill-Sambre, it eventually took four weeks before he could actually be named the new Renault boss.

But the minister's choice had been quick, and he stuck to it in spite of the delay caused by the negotiations with the Belgians.

The French administration had two priorities: First, Renault urgently needed a new driver at the wheel, as the car group was left in the middle of a critical turnaround, and secondly, it seemed important that the new man should be in line with Besse's driving style.

And after Levy spent his first day's work at Renault, having interviews with each of the company's 10 directors, one of them reportedly said, "He talks just like Besse!"

But, at this stage, what does Levy think of the quality of the Renault recovery engineered by Besse?

"It is obvious, there is no doubt about that," Levy said. "I know what Besse did at Renault. It is remarkable.

"The most important thing now is that Renault doesn't become content because it may have got back to the break-even point. It is my opinion that a state-owned industry, if it wants to fill any duty, has to make the same kind of profit as any private industry — even more so in a free market like the car market. Then you can talk about some social mission, but not before."

Besse had made the tough decisions to sell Renault assets and idle its workers so he could get out of the red and compete profitably. And there were rumors throughout last fall that all of part of Renault could be for sale — especially overseas stakes such as its 46 percent holding in American Motors.

During Levy's meetings with Madelin, was there any mention of the possible privatization of Renault?

"I don't wish to answer this kind of question," Levy said. "First, if there was any mention of it, I wouldn't tell you. So it would be dishonest to let you ask."

In answer to a question about whether he has a personal opinion about privatization, Levy said, "I have got a personal opinion, which is personal, and I have no opinion about those matters related to Renault."

Madelin had said earlier on French TV that it was not the part of the state to make cars.

Levy's response was, "I will not tell you whether I share this view or not. Mr. Madelin represents my shareholders. Thus, it is up to him to say what kind of policy he wants the management of Renault to follow.

"What I can tell you is this. For me, there is only one difference, at this stage, between a state-owned company and a private one. It lies in who owns the equity. For me, a state-owned group must be run just like a private company. I never experienced it any other way.

"The first, essential, unique goal, I think the No. 1 priority, is to live up to the rules of a competitive industry."

But will it not be a handicap that Levy must take time to learn the auto business at a time of such heavy competition?

"I think so, yes," he said. "I believe that, if it had been possible to find a successor to Georges Besse among Renault's management, it would have been better. But the government judged it was not possible, so I can only note it down."

But Levy indicated he could be helped in his study of Renault by a soon-to-be-delivered report on the company by Booz Allen & Hamilton, the U.S. management consultants, who Besse had called in a few weeks before his assassination.

Besides that, when a manager gets a new assignment like Levy at Renault, how does he proceed? What are the very first steps?

"At Renault, I spent my first day meeting for an hour with every director separately, to hear about their business, listen to their opinion about the company and what I should do first, and get the basic documentation that I'm about to review in detail," Levy said.

"I sure would like to go to the shopfloors and in the field too, if the diary of Renault's president allows for it."

People who had business relations with Levy like to describe him as a self-assertive man, but also as someone very accessible, straight and easy to talk with, a good communicator. He does not mind answering the telephone personally.

Regarding management, he admits to liking some kind of group deliberation, "because this helps to secure some unity of thinking at the director level. I think this is very important."

But that does not mean leaving problems to drag along within committees.

"The boss remains alone to take the final decisions," Levy said.

As an oil industry manager Levy had many links with Renault, including the sponsorship of Renault's Formula 1 auto racing team, and then as a supplier and technical partner at steel company Usinor.

Levy knows something else about his new company. He was a Renault customer for many years. He owns two Renault 5s, one at his Brussels apartment and one at his home in Vaucresson, an elegant suburb to the west of Paris (only minutes away from Renault's headquarters). Between these places, he used to drive his own Renault 25 Limousine.

"I must be the first president of Cockerill who doesn't drive a Mercedes," he said.

Raymond Haim Levy was born in Paris in 1927, the son of a sales executive. In 1946 he attended the Ecole Polytechnique. Then he spent one year learning nuclear physics at the Massachusetts Institue of Technology, from which he brought back a masters degree in science.

"I felt I was cut out to be a physicist," Levy said. "But when I came back to France, I found there was no opening for such a career. Nobody seemed to care about a physicist. I'd had a proposal to stay in the U.S. with the university, but I had declined it."

So Levy resumed his normal studies at the Ecole des Mines. That was where he met Besse, who was to become a friend.

He started his professional career much the same way as Besse. Two years in the coal mining industry, then two years in a public administration in the south of France. In 1957, Levy entered the state-owned oil industry, where he was to spend 23 years, ending with the position of vice president and chief executive of Elf-Aquitaine. He quit in 1980, after being asked to by a new chief executive with a different management style.

In 1981, Levy gained an appointment in the steel industry. One year later, the newly elected socialist government gave him the top job at Usinor, one of France's troubled steel groups. Levy devised a restructuring plan that was eventually to be applied. But in 1984 the government did not renew his contract.

"Let us say that the government decisions regarding the steel industry, in '84, were in line with what I had publicly advocated, on every point," Levy recalled. "But these decisions were against the will of the then-Minister of Industry, Laurent Fabius, probably against the will of one of the President's personal advisers, and against the will of the rival Sacilor steel group's president, too. My contract was legally subject to renewal at the time. I'd say that there was a political row against me. That was it."

After the Usinor coup, he was offered a similar job as head of a foreign steel group, Cockerill-Sambre in Belgium, which was in about the same financial problems as Usinor. He accepted.

"The diagnostic job had been done, and well done, by Jean Gandois, before I came," said Levy. Gandois headed the Belgian group for five years before handing command to Levy and going to the French aluminum group Pechiney — the very same group that Besse had turned around before going to Renault. Gandois was an active candidate for the chair at Renault last month.

But it was Levy who prevailed. And his mark should start to show at Renault in the coming months.

FORECAST

FROM PAGE 1

ventures involving the Japanese. Most of those plants are expected to come on line in 1988.

Imported cars will continue to make big gains in the U.S. market through the rest of the 1980s, the Commerce Department said. The coming year will be especially good for imports.

The department said actual sales during the next four years will be influenced by the construction of foreign-owned vehicle plants that will add "more capacity in the United States than is warranted." The plants being built by foreign companies are expected to have a combined capacity of between 1.5 million and 2 million units by 1990, the study said.

Those additions to domestic capacity and the introduction into the U.S. market of vehicles imported from such countries as Australia, Brazil and Taiwan, which previously did not market vehicles in the United States, are likely to result in considerable price pressure across much of the industry as manufacturers compete for market share, the department said.

"Eventually, however, a rationalization of overall capacity will stabilize the industry," the report said. That may mean plant closings or other consolidations within the industry.

The government said the light-truck and van market is expected to grow by 138,000 sales in 1987, up from estimated 1986 sales of 4,600,000 million. The projected 4,738,000 sales for 1987 will increase to 4,846,000 in 1990, according to the Commerce Department estimate.

With regard to the financial position of the U.S. industry, the Commerce Department said the balance sheets of all the "traditional" U.S. automobile manufacturers, with the exception of American Motors, have "improved markedly" since the recession of the early 1980s.

Profits in 1986 were below the levels of the last two years, however, because of the cost of manufacturer's marketing incentives.

The department added that U.S. manufacturers are expected to remain profitable during 1987, but their profit margins will be under pressure "if they are required to continue using marketing incentives to defend their market shares."

In 1986, consumer demand for subcompact cars rebounded, the Commerce Department noted, "partly because of domestic manufacturer promotions and the introduction of new import models."

HONDA

FROM PAGE 1

the dollar, compared with 165 now and over 200 one year ago.

To remain a major force in export markets and to hold its own in the very competitive domestic market, Honda set out the goals of its efficiency drive in the fall of 1985. The complete overhaul of its Suzuka and Sayama factories, together with a review of the whole parts supplier network, is due for completion in February 1989.

Honda has been quietly implementing the new production technology, but the existence of the so-called "Plan for Tripling Production Efficiency" became known only at the end of 1986 when mentioned in the Japanese press. Honda officials confirmed many of the details last week.

At the same time, production levels and local content at the Marysville, Ohio, plant are steadily increasing. Marysville is not part of the plan, but will benefit over the longer term from the developments, a Honda source said.

U.S. production this year will increase to 320,000, compared with just over 230,000 in 1986. It will reach a level of 360,000 in 1988. The following year, local content will have risen from the present 50 percent to 66 percent.

Honda officials stress that, despite the plan's title, production will not treble by the end of the decade. Instead, it will give Honda the flexibility to produce many different models on the same assembly line so that it can react quickly to market demands. It may also result in Honda buying more built-up components from suppliers.

But the company concedes that the new systems will substantially increase the potential capacities at Suzuka and Sayama. "We could increase production. It would depend on market demands," said one official.

At the end of August, Suzuka was producing at an annual rate of 582,800. At Sayama, the level was 508,400. Despite difficult trading and market conditions the company was managing to sell all the models it could produce.

Much of the reorganization at Suzuka will be completed this spring, when Honda will be capable of producing seven models on one production line: Civic and Integra in three-door, four-door and five-door forms and CR-X.

While company officials deny Japanese reports that as much as 80 percent of final assembly will be automated, the level will clearly be very high.

'87 forecast: U.S. growth slow, steady

The verdict is unanimous. Economists for General Motors, Ford Motor Co., Chrysler Corp., Dana Corp., Eaton Corp. and Chase Econometrics say the U.S. economy in 1987 will be similar to that of 1986, with slow but steady growth.

As far as the auto industry goes, these corporate money-minds predict strong sales of new vehicles, but weaker than last year — more on the order of 15 million units in 1987, compared to 16 million in 1986.

Interviewed for the Automotive News Economic Forecast '87 Extra in this issue, all of the economists expect slow U.S. economic growth in 1987. Most believe the first half of the year will be sluggish as tax reform takes effect, but will pick up in the second half.

Those interviewed included: David C. Munro, GM; John V. Deaver, Ford; Donald P. Hilty, Chrysler; William F. Prebe, Dana; Adrian T. Dillon, Eaton; and Edward Sullivan, Chase.

They predict economic growth, as measured by gross national product, will be about 2.5 percent this year.

Noting that slower growth means inflation with stagnant interest rates, the economists, on average, expect inflation to grow by about 3.2 percent in 1987, with interest rates remaining flat or dropping slightly.

They also see little change in unemployment, forecasting that it will remain at about 7 percent or decline a bit this year.

The economists also look for further depreciation of the dollar in 1987.

The most debatable subjects among the economists are consumer sentiment and import sales.

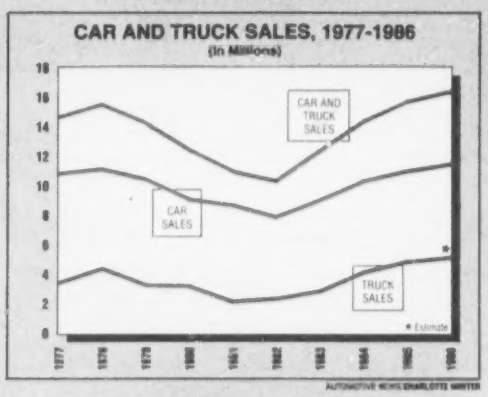
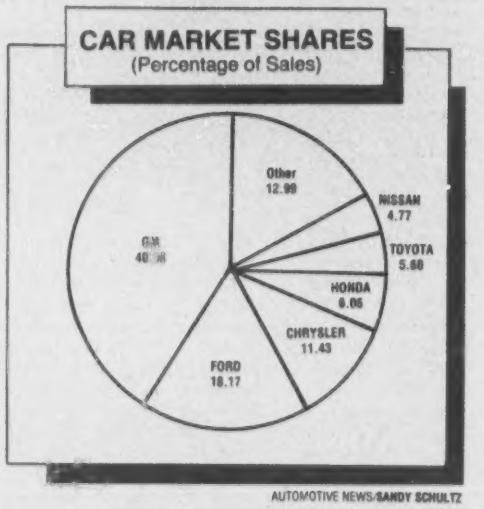
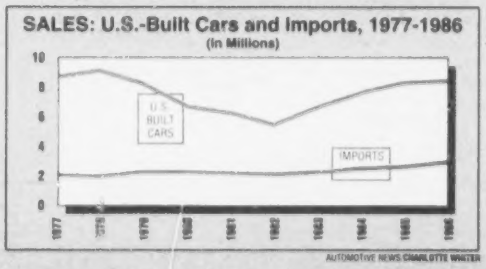
1986 SALES AT A GLANCE







GM will sell bus works to Greyhound

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors is selling its bus operations to Greyhound Corp., Automotive News has learned.

Authoritative sources confirmed the sale. An official announcement is likely within the next week or so.

The sale has been handled by Salomon Brothers, New York, on a high-bid basis.

Greyhound Corp., based in Phoenix, Ariz., had the money, the bus-building expertise and the management to pull off the deal.

Its manufacturing operations are headed by John Nasi, a former General Motors executive.

Greyhound Corp. is selling its Greyhound Bus Lines for $350 million in cash, securities and royalties to an investment group led by Fred G. Currey, of Dallas. The deal is expected to be completed by March.

Currey is chairman of Buslease Inc., which owns and manages a fleet of 1,100 buses which it leases to other companies.

Greyhound is retaining its Motor Coach Industries, or MIC, bus-manufacturing operations in Winnipeg, Manitoba and Pembina, N.D., and the Transportation Manufacturing Corp., or TMC, manufacturing operations in Roswell, N.M., as well as the Greyhound Lines of Canada and some other operations.

MCI and TMC build large intercity buses for the Greyhound Bus lines and other companies.

Outside sales are handled by Hausman Bus Sales & Parts Co., of Des Plaines, Ill.

Greyhound's current manufacturing/sales operation does not compete with GMC's transit business.

GM will sell all the tooling, rights and everything else, except its real estate, as part of the Greyhound deal.

GM employs 550 people in its bus operations in the Pontiac Central plant in Michigan, where it has been building about six coaches a day.

It currently has enough backorders to take it well into 1987.

GM also has a separate Canadian bus opera-

Honda to produce more U.S. componentry

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

COLUMBUS, Ohio — Honda Motor Co. will expand engine production and begin manufacturing transmissions and suspension and brake parts in Ohio to supply its Marysville plant.

The development comes as U.S. automakers have been streamlining — and in some cases jettisoning — component operations to become less vertically integrated.

Honda calls Marysville, which produces the Accord and Civic, "the most integrated motor vehicle manufacturing facility in the United States."

Lotus buying U.S. importer; GM hands off

By Richard Feast
and Kathleen Hamilton
AUTOMOTIVE NEWS STAFF REPORTERS

Group Lotus, General Motors' U.K.-based sports car company, will announce today (Jan. 12) that it has acquired control of its previously independent U.S. importer.

The friendly buyout is part of a 55 million pound ($80 million) six-year investment and expansion program for Group Lotus approved by the Lotus board in October.

One year ago, GM began purchasing Group Lotus stock, committing itself to purchasing 100 percent of the company for $33 million. Negotiations between Lotus and its U.S. distributor began in June 1985, before GM's acquisition of the British carmaker.

No financial details are being made public, but it includes a buyout of all 46 limited partners of Lotus Performance Cars, L.P., the U.S. importer-distributor. An outside source estimated the sale at between $16 million and $27 million.

The new company will be known as Lotus Cars USA Inc. It will operate from the old Lotus Performance headquarters in Norwood, N.J.

John A. Spiech, president and chief executive officer, is leaving the company immediately but amicably. Chairman Wesley C. Fredericks Jr. is staying on "indefinitely" and will add the title of chief executive. At least two marketing people will be added — but from the import-specialty car business, not from GM, Fredericks said.

He and Michael J. Kimberley, chief executive officer and managing director of Group Lotus, stressed the new U.S. company will remain independent of GM. That has been GM's policy with Lotus, as well. Two GM vice presidents sit on the Lotus board as non-executive directors, but apparently continue to make few operating decisions.

It has been GM's money that has made the biggest impact on the British carmaker and designer — allowing it to progress with long-overdue models, with plans to build a new plant and to expand the staff that performs contract engineering for other automakers.

Similarly, Lotus Performance has already benefited from the financial strength of the giant automaker: Earlier this year, General Motors Acceptance Corp. began servicing U.S. Lotus dealers. Fredericks and Kimberley are the only officers so far on the Lotus Cars USA board.

Kimberley said the plan is to raise the present 66 dealers to about 125 by 1992. At that stage Group Lotus will be producing about 5,000 cars a year and selling up to 2,000 of them in the United States. Now, dealers in 33 states are selling the $56,000 cars.

U.S. Lotus sales will remain steady until the first of its new-generation products, the moderately priced M-100, is launched here in the middle of 1989. It will sell about 180 vehicles this year, compared with about 140 in 1986, he said.

Lotus Performance Cars, L.P., was formed in 1982 by Fredericks, a car enthusiast and Wall Street lawyer who had represented Lotus. The marque had been selling poorly in the United States under its own import and distribution network, and fared no better when it enlisted Rolls-Royce to distribute the cars in the U.S.

Fredericks hired Spiech, at the time in Ferrari's top U.S. spot, and set up a limited partnership to import and distribute the fiberglass-bodied sports cars. In exchange for an investment of $100,000, the 46 partners received the first Lotus Turbo Esprits in the United States, a $15,000 tax deduction and, within a short time, a profit.

But Fredericks said Lotus Cars recognized early that the higher-volume moderately-priced car would make heavy demands on the U.S. company. That, coupled with the desire by U.S. operations to participate more in design, led to the acquisition talks.

AMC to revamp Kenosha for Omni and Jeep

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

American Motors is expected to announce today plans for a multi-million-dollar renovation of its aging Kenosha, Wis., plant to bring in subcompact Chrysler cars and new Jeep products.

Wisconsin officials, including newly elected Gov. Tommy Thompson, were negotiating with AMC representatives last week for a state aid package to renovate the Kenosha plant and provide training funds for workers.

The Kenosha plant dates back to the turn of the century. An AMC spokesman said the company wants to transform the plant into a more efficient operation to bring in new products.

Those products include Chrysler Motors' Dodge Omni and Plymouth Horizon models and a new line of Jeep products.

Under the current proposal, AMC will expand and modernize its main plant in Kenosha while continuing to build the Renault Alliance and full-sized Chrysler M-body cars in that facility until 1989. Omni-Horizon models will be built at an AMC-leased plant on Lake Michigan in Kenosha.

When the renovation of the main plant is completed, AMC will replace Alliance and M-body production with the Omni-Horizon and a new line of Jeep products.

William E. Hoglund, GM vice president in charge of B-O-C

LINKUP: *Cadillac regains operating control*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Cadillac will regain control of the engineering and manufacturing of most of its models in an effort to restore Cadillac's image as a world-class car company.

William E. Hoglund, General Motors vice president in charge of the Buick-Oldsmobile-Cadillac Group, announced last week Cadillac will merge with the B-O-C Detroit Product Team.

The move makes Cadillac a full-fledged car company again, at least as far as some of its product line is concerned. Cadillac and other GM divisions had control of their engineering and manufacturing taken away under GM's corporate reorganization of three years ago.

After the reorganization, Cadillac was responsible for only the marketing of its cars. The Detroit Product Team was responsible for the engineering and manufacturing of the heart of Cadillac's model line, including the Eldorado, Seville, Fleetwood Brougham and the Allante. The cars represent about 40 percent of Cadillac's sales. The team is also responsible for the Oldsmobile Toronado and Buick Riviera.

Hoglund said reuniting all those functions under Cadillac will streamline operations by eliminating duplicate staffs and link marketing more closely with car development, which will cut lead time on new models. No layoffs are expected.

Executives called the organizational change a natural evolution

GM to join Ford, Nissan, Mitsubishi with incentives

By Edward Lapham, Michelle Krebs and Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors is expected to institute a new round of retail incentives on selected models, perhaps as early as the end of this week.

Each division will be given flexibility to set its own program, according to one source, although the Fourteenth Floor will ultimately approve the programs.

Although no final decisions had been made by the end of last week, the options available to the divisions included price rollbacks on selected models, dealer cash incentive programs and special equipment packages.

Annual percentage rate financing, used heavily in the past, apparently is not on the list.

GM seemingly plans to stick to its promise of not offering across-the-board incentive programs in 1987.

Its approach is decentralized: Each division will decide what will work best to meet its objectives. "They (corporate marketing staff) asked us to submit our ideas beginning in December," the source said.

There was no GM response to the Ford low-interest financing program announced last week. That program offers a choice of 3.9 percent to 9.9 annual percentage rate financing or a cash rebate of up to $600 on Ford Ranger and Bronco II trucks.

The Ford program runs on delivered vehicles until Feb. 28. It offers a sliding scale of 3.9 APR for up to 24 months, 5.9 APR for up to 36 months, 7.9 APR for up to 48 months or 9.9 APR up to 60 months. The cash option is $500 on all 1986 or 1987 Ranger models or $600 on all Bronco II models.

Chrysler Motors, which launched a Nov. 21 to Jan. 20 3.9 APR or rebate program on Dodge Trucks and K-body cars, held pat.

However, two importers upped the ante.

Nissan last week started its first cash-to-dealers incentive program on cars since 1982 to boost traffic and trim a 68-day supply of inventory.

The program began Jan. 7 and runs through April 2. Dealers can receive up to $600 per vehicle on 1986, 1986½ and 1987 Sentras, Stanzas (excluding wagons) and Maximas, depending on sales volume.

The incentives have three levels. A dealer receives $300 per car for achieving the basic quota, $100 per car for achieving a higher volume, and $200 a car for meeting a third sales goal.

To support the program, Nissan is boosting its first quarter national advertising spending 20 percent above that of the 1986 fourth quarter, normally the heaviest quarter of a model year.

The last time Nissan offered cash to dealers on cars was in 1982 and

Portugese 4wd slated for sale in U.S.; Peck involved

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — A Ford-powered Portuguese four-wheel-drive vehicle will be imported into the United States next year by a new automotive company whose executives include Raymond A. Peck Jr., former head of NHTSA.

The company, Universal Motors of North America, headquartered here, was formed a little over a year ago, according to President James J. Lawler. Lawler is a former marketing executive with Volkswagen of America.

Peck is executive vice president and general counsel. Hugh Burgess, former vice president and chief operating officer of Peugeot Canada, is Universal's senior vice president for Europe. Among plans are:

- The Portuguese vehicle, to be called the Indian and manufactured by Uniao Metalo Mechanica (UMM), will be powered by the 3-liter Ford V-6 engine and five-speed transmission currently offered in Taurus and Sable models. The use of the U.S.-made engine marks the first time the powerplant will be available in a non-Ford product.
- Universal is test marketing another four-wheel drive made by Gruau in France.
- The company also plans to import a British sports car, which the Universal Motors officials would not identify.

Lawler and Peck said Universal Motors has a five-year development plan to import and market specialty vehicles. Lawler said the company is looking into several niches, including vans, sports cars, four-wheel-drive vehicles, motorcycles and military vehicles.

Lawler said an aerodynamic minivan is currently in the wings but would not reveal details.

Volume goals, according to Lawler, depend on the niche and could range from as little as 500 units to as many as 50,000.

Lawler said several major announcements will be forthcoming in the next few weeks concerning other contracts the company is negotiating. He would not reveal the content of these negotiations or identify the companies.

Universal will operate through franchised dealers.

Peck said the company will be careful about dealer recruitment and wants dealers who can demonstrate performance.

As vice president of dealer development, Universal has appointed Michael A. Caruso, vice president of Country Ford on Long Island.

The Indian would be marketed through a Universal subsidiary, Indian Motor Co. Universal bought the rights to the old Indian motorcycle company names and logos.

That company was a major force in the motorcycle business until the early 1950s and it still has a high level of recognition.

The Portuguese Indian will be offered in two models: base and luxury. While prices have not been established, it was suggested they would be in the $14,000-$18,000 bracket.

The UMM vehicle has been available in Portugal for seven years. It originally was designed for NATO general purpose use and is being modified for U.S. consumers, including installation of an automatic transmission and leather interior.

RVIA picks Stempel as keynoter

Robert C. Stempel, General Motors executive vice president — Worldwide Truck and Bus Group and Overseas Operations, will be the keynote speaker at the Recreational Vehicle Industry Association's annual meeting March 1-5 in Honolulu.

Stempel will deliver his address March 4, following RVIA's chairman's reception and dinner.

RVIA also said that with $172,590 in contributions from corporations and individuals representing all segments of its industry, the association exceeded its fund-raising goal for market expansion.

The association's RV Market Expansion Program campaign was launched prior to its national show in Atlanta. A goal of $150,000 had been set. The money will be used to promote the RV market.

The money came from 477 contributors, according to David J. Humphreys, RVIA president.

RVIA also announced that The Nashville Network's TV series, "Wish You Were Here," has been renewed for a second season and will begin airing in April.

The program is hosted by country musician Kenny Price and his wife Donna.

Meanwhile, 12 RV industry executives were appointed or reappointed RVIA committee chairmen for 1987.

Scott Chapman, president of Bivouac Industries, Vandalia, Mich., will chair the Custom Van Conversion Manufacturers Committee.

Appointed chairman of the Lawyers' Committee was Robert Barefield, general counsel, ElDorado Motor Corp.

RVIA's Marketing Committee will be chaired by James Sheldon, director of marketing, Fleetwood Enterprises, Riverside, Calif.

Gene Stout, executive vice president, Coachmen Industries Inc., Elkhart, Ind., was appointed Public and Legislative Affairs Committee chairman.

Mel Adams, vice president and general manager of Coleman Co.'s RV Group, Wichita, Kan., will head the Nominating Committee.

Robert B. Lee, president, Country Campers Inc., Junction City, Ore., has been reappointed Western Show Committee chairman.

Robert R. Rawlings, vice president, CIT Financial Services, Livingston, N.J., will continue as Finance Committee chairman.

RVIA's National Show Committee will be chaired again by Steve Krivian, director of corporate marketing services, Thor Industries, Jackson Center, Ohio.

B.J. Thompson, president, B.J. Thompson Associates Inc., Mishawaka, Ind., has been reappointed chairman of RVIA's Public Relations Committee.

Mike Mitchell, president, Nu Wa Industries, Chanute, Kan., will serve another term as Standards Steering Committee and Enforcement Board chairman.

RVIA's Automotive Liaison Committee will continue to be chaired by David J. Humphreys, president of RVIA.

Bob Kropf, president of Kropf Manufacturing, Goshen, Ind., has been appointed chairman of RVIA's newly formed Park Trailer Committee.

Brahma gets a new top

Brahma Inc., Grand Prairie, Texas, is offering a new model LW2 with optional side load window, rear bay window and spoiler. The company uses Dow Chemical's ROVEL polymer for high impact resistance and durability. Brahma's toppers fit nine models of full and compact-sized pickups.

Atlanta show criticized, but RVIA defends '86 site

TRUCKING TRENDS

JOSEPH BOHN

The Recreational Vehicle Industry Association's grand experiment with Atlanta as the site for its 24th annual National RV Trade Show turned into a nightmare for many suppliers and attendees.

The suppliers found themselves tucked away in small, out-of-the-way nooks and crannies on different floors and sections of the Georgia World Congress Center where they quietly and not-so-quietly fumed about the lack of traffic and exposure.

Visitors, in turn, often needed a map and a lot of determination to find anyone. Typically, a casual visitor might walk into a room, work his way down one isle and peek around a corner. If nothing jumped out at him, he would turn around and walk out.

Some suppliers felt that manufacturers were allotted too much space and sometimes had unnecessarily large vehicle displays.

And there were complaints about parties and meetings scattered so widely that it became impossible to find everyone as easily as in Louisville, Ky., the site of the 1985 show.

So, what is RVIA's reaction?

Mary Hutya, vice president of meetings and exhibits, acknowledged the supplier complaints, but defended Atlanta. And even though the convention will return to Louisville next year, she is not sure it will stay there.

Atlanta show attendance was up — or down — depending on how you look at it.

RVIA counted 8,533 people at the show, 3 percent more than in 1985. However, dealer/buyer attendance was off 10 percent.

Hutya attributed the higher head count to more "non-exhibiting" members and press coverage.

There were almost three times as many newspeople as there were at Lousiville in 1985, she said.

Why did RVIA move the show to Atlanta?

"For many years the building (Kentucky Fair and Exhibition Center) was poorly maintained," Hutya said.

"We outgrew the building five years ago. We asked for things to be done. The RVIA had to build a registration area the last two years to accommodate people coming through the show," she added, pointing out that when the Louisville show building was renovated two years ago, it actually ended up with less registration space.

"We wanted to get their (Louisville show officials) attention," she said. "We needed more space, more up-to-date space, a better maintained building. In Atlanta, we also wanted more national attention, which we got, and we also increased the amount of space for manufacturers."

Hutya said she felt that "city officials in Louisville are much more aware of our problems now and are more eager to work with us."

But she still defended Atlanta, saying that the Georgia World Congress Center was "first-class," and that it was "not fair to judge a show's experience, based on one year in a new facility."

Hutya said she believed some of the supplier problems could be worked out.

She said she talked to Atlanta officials about not using so many little rooms and using the ballroom to handle most of the suppliers.

"They (Atlanta officials) seemed willing to do that," she added. "If you put suppliers in a centralized location, that would solve many of their problems."

She also said that going back to Louisville would not solve everyone's problems. She cited past complaints about overcrowded aisles that didn't give sellers a chance to sit down and talk to customers, and she also recalled that Louisville's center arena had accommodated only 220 out of 550 supplier booths in 1985.

That meant a lot of suppliers were crowded into meeting rooms and far corners of the building.

Hutya concluded that most manufacturers at Atlanta, even if they weren't happy with the total number of people, were happy with the people they did see.

"They were writing business," she added, citing one manufacturer who called it the "best show" he'd attended and another who signed eight new dealers.

Chevy gain

Burger expects to sell 100,000 RVs, second-highest total for a model year

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

ATLANTA — Chevrolet expects to sell more than 100,000 recreational vehicles during the 1987 model year, only the second time it has topped that mark.

Robert D. Burger, Chevrolet general manager, said Chevrolet has seen additional strength in the RV market the past few months, prompting the division to project an improvement over the 95,000 RV units it sold in the 1986 model year.

Chevrolet set an all-time record of nearly 150,000 RVs in the 1984 model year. The strong sales were the result of the return to the market of buyers who deferred purchases in the late 1970s and early 1980s because of high fuel prices and a recession.

Speaking at the 24th annual National RVIA Trade Show here, Burger said, "We're particularly encouraged to see the industry's new marketing approaches to today's sophisticated buyer."

Chevrolet has marketing approaches of its own.

Its "Chevy Outdoors" publication, designed to attract buyers to the RV lifestyle, was launched in January 1986 and now has circulation of nearly one million.

Chevy Outdoors will feature special sections on popular outdoor sports, including a fishing section in the spring, boating in the summer, field sports in the fall and snow sports in the winter.

Eighty separate mailing lists are used to distribute the magazine to wider audiences. Each recipient initially receives a copy with a reader response card. Readers who choose to continue receiving the publication get a one-year free subscription.

Chevrolet manufactures RVs for all three categories of self-contained units, combination units and towing units.

Its self-contained RVs include the Class A motor home chassis, Class C Chevy Van cutaways, full-sized vans and Astro vans.

Burger predicted Chevrolet would take more than 90 percent of the Class A segment in the 1987 model year.

The Class A motor home market is becoming increasingly popular because of the vehicle's roominess and because its price is only slightly higher than that of a Class C unit, Burger said.

He also predicted sales of 20,000 Astro van conversions in 1987, a 10 percent increase over last year.

Burger pointed out that van conversions have always appealed to buyers. Some buyers purchase them as entry-level vehicles with the thought of moving up, while others consider them an alternative to large station wagons.

Chevrolet's combination units — those with dual uses — include S-10 pickups, full-sized pickups and the El Camino.

Tow units include Chevrolet's entire light-duty truck line, where the Suburban is a particular favorite. More than 50 percent of Suburbans are bought for towing, Burger said.

October shipments increase 5%

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale RV shipments of 29,200 in October showed a healthy 5.4 percent gain over the 1985 month.

Year-to-date, 10-month shipments of 328,100 were up 5.0 percent from the 1985 period, according to the Recreational Vehicle Industry Association.

Seasonally adjusted, wholesale sales were running at a 375,000-unit annual rate, with total calendar 1986 projected to be 5 percent ahead of 1985.

Also improving in October was the Index of Consumer Sentiment, which rose 3.6 points to 95.6. The survey is conducted by the University of Michigan Survey Research Center.

Consumers generally agree that business conditions will improve in 1987, without fear of a recession, and that buying conditions for vehicles and homes will remain favorable.

In October, shipments of 12,500 van conversions were off a slight 0.8 percent from the year-earlier period.

Ten-month van-conversion shipments of 158,600 were up a strong 13.2 percent over 1985, however.

Motor home deliveries of 5,800 were up 11.5 percent for the month.

With a 57,300 year-to-date total, they were off 5.6 percent for the 10-month period.

Retail sales of those products continued to outperform wholesale deliveries, the RVIA pointed out. In fact, year-to-date retail sales appear to be higher than wholesale shipments, indicating a decline in dealer inventory, RVIA added.

October shipments of 10,900 towable RVs were up 10.1 percent in October. The year-to-date total of 112,200 was up 0.4 percent.

While both folding camping trailers and truck campers showed unusual late-year strength, travel trailers accounted for most of the month's gain in that category.

Recreational Vehicle Wholesale Deliveries

	October 1986	October 1985	% change	10 months 1986	10 months 1985	% change
Travel trailers	7,800	7,300	+ 6.8	76,700	74,300	+ 1.9

TAX REFORM

1987
Internal Revenue Service
Instructions for Schedules A, B, C, D, E, F, and SE
Instructions for preparing Form 1040
From the Commissioner

Its impact on dealers and automakers

By Geoff Sundstrom

New-car sales in the first few months of 1987 ought to tell automakers and dealers a great deal about how tax reform will affect their business this year and next.

That's because most taxpayers are now calculating the amount of tax money they will owe the government and how much money they will take home under provisions of the Tax Reform Act of 1986.

Although the Tax Reform Act requires that the new W-4 forms be submitted by Oct. 1, 1987, the IRS is advising employees to submit the new form to their employers as early as possible in 1987. Failure to do so, the IRS warns, could result in substantial under- or over-withholding — and over-withholding could lead to additional taxes owed at the end of the year or, worse, tax penalties.

Because of the government's early-warning signal, an Internal Revenue Service spokesman tells *Automotive News*: "We expect most taxpayers to file

Continued on page E2

TAX REFORM

Continued from cover page

W-4s early in the year. For many people it'll be the first indication of whether they're winners or losers under tax reform."

And that would have a bearing on auto sales and production, for — theoretically, at least — the more winners among the nation's taxpayers, the more potential new-car buyers will trek to dealer showrooms throughout the year.

As things look now, the impact of tax reform on automakers and dealers should not be all that exhilarating or traumatic — although there is good news and not-so-good news.

The National Automobile Dealers Association believes most consumers will find themselves better off with the lower overall tax rates, and that car sales will benefit.

However, NADA cautions that low-rate financing and other incentives offered by automakers last fall may have stolen sales from early 1987.

Agreeing with that is Chase Econometrics, Bala Cynwyd, Pa., which believes changes in the tax code caused a shift of 150,000 vehicle purchases out of 1987 and into the final quarter of 1986.

That occurred, Chase maintains, because car buyers sought to maximize consumer-interest deductions and use sales tax deductions before the end of 1986. The Tax Reform Act eliminates the sales-tax deduction entirely and phases out consumer interest deductions.

According to a report prepared by Chase senior economist Geraldine Feely and director of automotive services Edward J. Sullivan, "All but 20,000 (of the advance car sales were) concentrated in the luxury and large-car segments, where the sales-tax deductions can be substantial."

Sullivan says that in 1987, "The new tax code will result in a 3-percent increase in overall consumer ability to purchase new cars. But uncertainty regarding end-of-year tax liabilities will probably restrain consumer spending during the year."

	No Tax Reform				Tax Reform			
	1985	1986	1987	1988	1985	1986	1987	1988
U.S. Sales	11.0	11.1	10.7	10.6	11.0	11.1	10.6	10.8
Large Car Sales	5.0	5.1	5.0	4.9	5.0	5.2	4.9	5.0
Small Car Sales	6.0	6.0	5.7	5.7	6.0	6.0	5.7	5.8
U.S. Production	8.1	7.8	7.6	7.0	8.1	7.8	7.6	7.2
Cumulative Job Losses	—	23,940	38,610	79,100	—	21,450	37,030	64,470

The good news for the auto economy, according to Chase, is that tax liabilities will be clarified in 1988, which should push car sales up. "Our forecasts indicate a boost in auto sales of 240,000 units compared to the no-tax-reform baseline scenario," Sullivan says.

He adds: "Since quotas on Japanese imports will remain in place and the tax reform effects will limit European luxury-car gains, U.S. manufacturers should sell about 80 percent of that total, 200,000 unit sales over what they could have expected to sell in the absence of the tax-reform bill.

"But even the extra boost given U.S. auto markets will not be able to avoid the continuing retrenchment in the U.S. auto industry. Our forecasts indicate that domestic production of autos for the U.S. marketplace will continue to decline rapidly.

"The tax-reform will, however, have the effect of keeping the post-1985 decline to 920,000 versus 1.1 million units, and 64,400 job losses versus 79,100 job losses in the North American automobile industry."

Data provided by Chase project total U.S. car sales of 10.6 million in 1987 and 10.8 million in 1988. U.S. production is projected to decline, however, from 7.6 million in 1987 to 7.2 million in 1988.

According to Chase, large cars will account for 4.9 million sales in 1987 and 5.0 million in 1988. Small-car sales will total 5.7 million in 1987 and 5.8 million in 1988.

Chase estimates that without tax reform, total U.S. car sales would be 10.7 million in 1987, falling to 10.6 million in 1988. U.S. production would have remained the same at 7.6 million units in 1987, with or without tax reform. But production would fall more steeply to 7.0 million in 1988 under a no-tax-reform scenario.

Chase estimates an unreformed tax code would have moved large-car sales higher by 100,000 units in 1987 to 5.0 million units, but would have fallen to 4.9 million in 1988.

Small-car sales under the old tax environment for 1987 are the same as those projected for the new one — 5.7 million units. Also under the former tax structure, small-car sales in 1988 would have lost the 100,000 units they are projected to gain under tax reform by remaining steady at 5.7 million units.

Tax reform's impact on dealership profitability will be positive in 1987, according to a report prepared by Mark E. Battersby, a financial and tax analyst in Ardmore, Pa.

The study, *Auto Marketing and the Tax Reform Act of 1986*, predicts that automobile dealerships, "historically a high tax payer, will reap big benefits from the tax law's low corporate tax rates — enough to offset the loss of some favorable tax treatment accorded it in the past."

Battersby adds: "Perhaps best of all, the automobile dealership's customers will be better off under this bill and able to buy more of the dealer's wares.

"Car dealers will find their income taxed at lower rates, but any new equipment acquisitions (will cost) more out-of-pocket, thanks to the loss of the investment-tax credit and longer depreciable lives for equipment."

The report notes that after June 30, 1987, incorporated automobile dealerships will be subject to a top tax rate of only 34 percent, far lower than the present top tax rate of 46 percent. Individuals, whether operating as sole proprietors, partners or shareholders in a Subchapter "S" corporation, would find their income taxed at either 15 or 28 percent by 1988.

Battersby observes: "In the past, a partnership or Subchapter 'S' corporation with a tax year different from that of the partner or shareholder offered a number of tax advantages, not the least of which was income shifting."

However, he warns: "Under the new rules, a partnership would be required to adopt the same taxable year as that of the partners owning a majority of the interest.

"Also, all Subchapter 'S' corporations would be required to adopt the calendar year as their tax year unless a satisfactory business purpose for a fiscal year could be presented to the IRS."

Although tax changes of this kind may be lamentable for many dealerships, Battersby says the overall lower tax rates should still allow most dealers to come out ahead.

"This contradiction, a giving with one hand while taking away with the other hand, is typical of the entire tax bill," Battersby says. "But once all of the provisions are in effect and all of the tax rates fully phased in, the average automobile dealer should benefit. Of course, because of the complexity of these new rules, he will require the assistance of a qualified professional."

Changes in the tax law that eliminate sales tax deductions and phase out consumer-interest deductions are being touted as big gains for the consumer leasing industry.

Nonetheless, analysts are cautioning consumers about a switch to leasing.

According to Xerox's LMV Leasing Inc., which has a vested interested in selling leasing deals, "The Act does not contain a bias in favor of ownership versus leasing, or vice versa. It leaves untouched the basic advantages of open-end fleet leasing," while the cost of consumer leases may increase somewhat because of slower depreciation rules and the loss of the Investment Tax Credit.

LMV Leasing points out that the loss of sales tax deductibility and a phase-out of consumer-interest write-offs will make the cost of personal-car ownership rise. These deductions are retained, however, for those who buy vehicles for business use.

LMV's message seems to be that the new law has not changed the most important questions regarding leasing: How will the vehicle be used and what are the various leasing-purchasing options available?

The potential buyer-lessee must still consider estimated trade-in values, anticipated mileage, length of service, maintenance considerations, insurance coverage and personal-vehicle choice.

It is also important to remember that not all leases and purchasing terms are the same. Only when the questions are answered should tax considerations be allowed to swing the decision one way or the other.

The same may hold true for the Tax Reform Act and its effect — for better or for worse — on the U.S. auto market. Its true measure won't be understood until all the questions are answered, perhaps a year from now. ■

COMING MARCH 9: AUTOMOTIVE NEWS IMPORT WORLD EXTRA

U-M predicts fewer car sales in '87

By Michelle Krebs

New-car sales are forecast to display solid but not record strength over the next two years, according to the University of Michigan's economic outlook.

University economists Saul H. Hymans, Joan P. Crary and Janet C. Wolfe, who prepared the latest forecast, predict car sales in the U.S. will be 10.4 million units in the 1987 model year and 10.7 million in the 1988 model year.

They predict that while the overall U.S. economy will grow at a faster rate in 1987 than in 1986, car sales will be lower in 1987 than in 1986 and the auto industry will not contribute to the nation's overall growth.

As for the overall U.S. economy, the economists predict:

■ Economic growth as measured by gross national product will increase 3.3 percent in 1987. That follows an increase in 1986 estimated to come in at about 2.6 percent, although final figures for the year are not yet available.

■ GNP growth for 1988 will be 3.2 percent because of the second phase of a drop in personal income taxes under tax reform going into effect in January 1988. Further growth in 1988 is also predicted because the real trade balance is expected to hold steady.

■ Unemployment will be reduced in the growing economy. Small reductions are seen for 1987 and 1988 with the average unemployment rate expected to be 6.9 percent in 1987 and 6.7 percent in 1988. The unemployment rate for 1986 is expected to come in at about 7.1 percent.

■ Consumer prices, as measured by the personal consumption deflator, will be 3.8 percent higher in 1987 than in 1986, and be another 4.9 percent higher in 1988. Consumer prices were held down during 1986 by the dramatic decline in oil prices and a very small increase in non-oil import prices. As measured by the consumer price index, inflation will be about 4.5 percent in 1987 and 5.2 percent in 1988.

■ The growth of real disposable income, reflecting the opposing influences of higher prices and net personal income via the tax cut, is forecast to fall back to a bit more than 2 percent annually in 1987 and 1988.

■ Consumer spending will continue to boost the economy in 1987 and 1988, influenced by tax reform, which will raise household purchasing power in 1987 and again in 1988. Consumer spending also will be aided by lower interest rates.

■ Profits, including inventory valuation and capital consumption adjustments, are expected to increase to 7.8 percent of the GNP after hovering at just above 7 percent since 1984.

■ The combination of modest improvement in unemployment, output growth averaging over 3 percent and mortgage rates continuing to edge down during the next year implies continued strength in the housing market. Housing starts will continue during 1987 at the 1986 average level of 1.84 million units and will increase to 1.97 million units in 1988.

■ The trade-weighted value of the U.S. dollar will show a 9.5-percent decline in 1987, following a 22.2-percent drop from 1985 to 1986. Minimal further deterioration in real net exports, amounting to $5.6 billion, is predicted. Real net exports will hold virtually constant for 1988.

When the dollar price of non-oil imports changed little between 1985 and 1986, while oil prices collapsed, the U.S.'s real net exports declined by another $40 billion.

With the expected upturn in the dollar price of non-oil imports and stability in world oil markets, minimal further deterioration in real net exports is expected, amounting to $5.6 billion in 1987. ■

1987 ECONOMIC PREDICTIONS

	Total Motor Vehicle Sales	Passenger Car Sales	Truck Sales	U.S. Economic Growth (measured by GNP adjusted for inflation)	Inflation (measured by Consumer Price Index)	Interest Rates	Unemployment Rate	U.S. Dollar	Consumer Attitudes
David C. Munro General Motors	15.0-15.2 million	10.5-10.7 million	4.5 million	About 2½%	3.0%	Flat	Flat	Possibly a little more weakening	Remain strong, but could retreat if it moves at all
John V. Deaver Ford Motor Co.	15.0 million	10.5 million	4.5 million	2.3%	3.3%	Same level	Flat	Continued depreciation	Fairly strong
Donald P. Hilty Chrysler Corp.	14.7-15.4 million	10.3-10.7 million	4.4-4.7 million	1.7%	3.5%	Down first half; upward progress in second half	Higher in first half; lower in second half; overall slight increase	Resume depreciation somewhat	Deteriorate at a faster pace, especially in first half
William F. Prebe Dana Corp.	14.7 million	10.6 million	4.1 million	2.8%	3.2%	Slightly down	Slightly lower (6.9%)	10-15% more depreciation	Will strengthen as year progresses
Adrian T. Dillon Eaton Corp.	15.3 million	10.7 million	4.6 million	2.7%	3.0%	Down slightly, then up slightly after mid-year	Slightly lower (6.8%)	Down 10-15%	Will remain at current strong levels
Edward Sullivan Chase Econometrics	14.97 million	10.5 million	4.44 million (light trucks only)	2.4%	3.4%	Slightly down	Slightly down (6.9%)	Slight decline	Slightly softer

Analyzing the analysts

Based on predictions made in *Automotive News* one year ago, Dana Corp.'s William F. Prebe was the most accurate of six 1986 economic forecasters. Of nine economic categories, he was closest in four: passenger car sales, U.S. economic growth, inflation and value of the U.S. dollar.

General Motors' David C. Munro led in two categories (total motor-vehicle sales and truck sales). Eaton Corp.'s Adrian T. Dillon took honors with his unemployment-rate forecast and tied with Chrysler Corp.'s Donald P. Hilty in the interest-rate category.

The ninth category — consumer attitudes — wound up in a tie between Hilty and Ford Motor Co.'s John V. Deaver.

None of the economists came very close to forecasting 1986 total motor-vehicle sales (16.0 million) or passenger-car sales (11.25 million). Munro (15.0 million) was closest on the former, Prebe (10.77 million) on the latter.

Munro's forecast of 4.5 million truck sales for 1986 was nearest to the actual mark of 4.8 million.

Prebe's 2.9-percent estimate of U.S. economic growth and 3.3 percent estimate on inflation were closest to what are expected to be the final figures — 2.6 percent and 2.0 percent, respectively.

Last year's sixth forecaster was TRW Inc. economist Wynn V. Bussman, now with Chrysler. ■

Economists predict slow but steady growth for the rest of the decade

By Michelle Krebs and David Versical

Economists predict more of the same for the 1987 economy, and that's not all bad, they say.

Economists for General Motors, Ford Motor Co., Chrysler Corp., Dana Corp., Eaton Corp. and Chase Econometrics say the 1987 economy will be similar to that of 1986, with slow but steady growth. Car sales will be strong, they say, but not as strong as 1986.

David C. Munro, GM economist, says it would be "our extraordinary good fortune" to have the economy continue in the 1986 fashion of slow and steady growth.

Any surprises that GM is watching out for are not serious enough to cause a deep recession even if all of them should occur, notes Munro, who says, "We give them a less than 50-50 likelihood of coming to pass."

John V. Deaver, Ford corporate economist, also predicts slow economic growth; but he is not disappointed because slow, steady economic growth also means low inflation and low interest rates. He says, "The forecast leaves a lot of upside potential with little downside risk."

Economists figure the first half of 1987 is likely to be weaker than the second half, with the economy gaining momentum through the last two quarters of the year.

Donald P. Hilty, Chrysler's corporate economist, predicts tax reform, which took effect Jan. 1, could cause the economy to soften in the first half.

Car sales could be softer in the first half than the second, Hilty maintains, because of advanced car-buying that took place in 1986. Some sales were stolen from the first half because of aggressive incentives in 1986, while year-end buying was triggered by elimination of the sales tax deduction under tax reform, he says.

William F. Prebe, economist for Dana Corp., agrees 1987 will begin sluggishly but will get stronger as the year goes on. Even so, he's concerned by the lack of pep in the economy. His "worry list" includes housing, construction and car sales. "If demand should weaken somewhat from where it is, that could trigger a recession," Prebe says. "We need something to pick the economy up."

Edward Sullivan, of Chase Econometrics, is the most pessimistic of the economists *Automotive News* interviewed. He sees greater potential for the economy to worsen than to improve.

Sullivan believes tax reform may have triggered a fourth-quarter spending splurge as consumers tried to beat the tax changes, and such a push could leave the economy listless. "Given the fragile state of the economy," he says, "it doesn't take much to send it into a recession."

But Adrian T. Dillon, Eaton Corp. economist, argues a recession is out of the picture until the 1990s. He sees no structural reason for a recession in the next two to three years, noting that, above all, there are no constraints on the economy's ability to grow.

"If you look at past recessions," Dillon says, "they've been caused by constraints on the economy's ability to grow."

Overextended factories, a shortage of labor, high interest rates — factors that could lead to a recession — aren't a concern now, Dillon contends. He doesn't foresee any of these problems coming into play before 1989 or 1990.

U.S. vehicle market

The economists predict sales of new vehicles in the United States will be close to 15.0 million units in 1987 — about 10.5 million cars and 4.4 million trucks.

GM's Munro says the industry may not have a record year in 1987 because of a decline in consumer buying, particularly durable goods such as cars. "But we thought the same for 1986, and it turned out to be a 15-million year," he notes. "A third year of above 15 million sales is a reliable prospect, and that's extremely good."

Dana's Prebe predicts car sales in 1987 will be close to the 1986 level, even though he estimates incentives robbed 300,000 to 500,000 sales from 1987. "I don't look for the year to be that bad," he says. "By the middle of 1987 I suspect the economy will be moving along at a pretty good clip."

For the rest of the decade, he expects auto sales to progress "sideways," with car sales climbing gradually from 11.8 million in 1985 to 12 million by 1990.

Among his explanations for the slow growth in car sales are a shift from car sales to light truck sales, slower population growth and people keeping their cars longer.

Incentives

Ford's Deaver says sales will depend partly on what automakers do about incentives.

Noting that 1986 began with a major interest-rate incentive program, and incentives continued throughout the year with only small breaks, Deaver says, "If incentives are more or less of the same magnitude in 1987 as they were in 1986, that could mean our forecast for car volume is too low."

On the same note, Chrysler's Hilty expects less aggressive marketing by automakers this year. "All of the car companies will be re-evaluating their marketing strategies," he says. "We'll also be evaluating imports, especially the Japanese. I don't expect the industry will get too greedy."

Eaton's Dillon expects incentives in 1987, but more modest than those in 1986. He says GM's reduced market share last year suggests the giant automaker, which has taken the lead in incentives in the past, may again have to resort to them to hang on to market share, although the incentives won't match the low interest rates offered in 1986.

Prebe expects incentives to continue — not so much to limit car inventories, but to curb import sales.

Hilty offers a range for 1987 car sales of 10.3 to 10.7 million, noting that even his lowest estimate is not a bad car year. "The surprises will be on the upside," he says. One of the surprises may be that U.S. consumers won't be as concerned as expected about tax reform, although Chrysler isn't counting on that.

Adds Hilty: "Chrysler needs to prove to the world that this car company can come out of a recession or down-economy in good shape. So our planning tends to be on the conservative side."

Import vehicle sales

Hilty predicts import sales could slow down because of the pressure of stronger foreign currencies against the U.S. dollar.

He points out that the Japanese hedged their currencies from six months to two years to keep from raising vehicle prices as much as the yen appreciated. But those hedges expire in 1987 and the import share could show a drop.

"The domestics will have an opportunity to take penetration from imports, so the forecast is better for domestic companies than the overall numbers imply," Hilty says.

Dillon predicts imports will not capture a much bigger share in 1987. Import sales may be up by about 100,000 units, he predicts, noting that supplies of imports are climbing above 30-day levels.

Hilty adds, however, that the sum of imports and transplants — Japanese cars built in the U.S. — will continue to rise as a percentage of the total market.

Chase's Sullivan sees no leveling off of import share in 1987. He expects overall imports to increase from the 3.1-million level of 1986 to 3.35 million in 1987, with most of the increase coming from nontraditional sources including South Korea, Brazil and Mexico.

Sullivan predicts Japanese voluntary restraints, which limit the number of cars shipped from Japan to the U.S., will increase by 150,000 this year. Current restraints expire March 31. He reasons that small Japanese manufacturers have been hurt by the restraints, so the Japanese will raise the quotas to help them.

Sullivan notes, however, that the Japanese industry is going through problems of its own with slow sales in its home market and Nissan Motor Co. Ltd. reporting its first operating loss since going public in 1951. "The Japanese don't feel they have to make further sacrifices," Sullivan says.

He predicts a major issue the industry will face in the next few years is a relatively flat U.S. market with greater import penetration and increased production in the U.S. by Japanese companies.

"Everyone will be hurt by this," Sullivan says. "Domestic manufacturers will probably be hurt most." He predicts imports will hit 3.8 million units annually by 1989.

Sullivan expects the Big Three will suffer a 700,000-unit decline in annual production between now and 1990. This, he maintains, means the Big Three will have to close another three to five plants in addition to those already announced for shutdown.

Economic growth

All of the economists expect slow U.S. economic growth in 1987. Most believe the first half will be sluggish as tax reform takes effect, but will pick up in the second half. They predict economic growth as measured by gross national product will be about 2.5 percent in 1987.

PREDICTIONS

Continued from page E11

Slower growth means inflation and interest rates will remain in check. On average, the economists expect inflation to grow by about 3.2 percent in 1987. They say interest rates will remain flat, though some expect a slight drop.

The economists predict little change in the unemployment rate, which will come in at about 7 percent for 1986. Some anticipate a slight drop next year.

However, Chrysler's Hilty is disturbed about some trends he sees in the employment picture. The average work-week, he notes, is lower than during the trough of the last recession. "This indicates a lot of people have jobs but aren't working a lot of hours," he says.

It also means disposable income, which rose only 1.5 percent in 1986, is actually dropping and will continue to do so, which will slow consumer spending.

The U.S. dollar

The economists forecast further depreciation of the dollar in 1987.

"We're still uneasy about international exchange rates," Deaver says. He notes the U.S. dollar versus the Japanese yen may be low enough, but the dollar versus other currencies, particularly South Korea's, needs to make further progress in light of large trade imbalances with the U.S.

Deaver sees further modest weakening of the U.S. dollar as a plus. "We figure we're halfway to where we need to be," he says. "We need more. If it doesn't happen, we'll have more trade-deficit problems. There's been some progress on the trade deficit, but only because of currency shifts. More changes should occur."

Consumer sentiment

Consumer sentiment, which could prove to be a key factor in the 1987 economic forecast, is a subject of debate.

Generally, the economists believe consumer confidence will remain strong, though not at record levels. But some believe there could be some retreat in confidence, leading to slower consumer spending.

One factor that will determine the consumer-confidence level is consumer reaction to tax reform. The economists believe consumers may hold off buying in the first half of 1987 as they figure out what tax reform means to them.

Chrysler's Hilty is the most concerned about consumer attitudes. He notes the University of Michigan's survey of consumer attitudes has shown a decline and the Conference Board's index has fallen to the lowest level in two years, dropping dramatically the past several months.

Says Hilty: "Consumers seem to be saying they like what they see today, but they're worried about tomorrow. They don't see themselves making more in 1987 than in 1986, which affects their spending plans."

Prebe says consumer sentiment will improve as the year goes on. In the first half, GM's announcement of layoffs and the new tax rules taking effect will be fresh on consumers' minds, he notes, "but once they realize they weren't hurt that badly by the tax reform bill, they'll be more likely to make new investments."

Issues in Washington

In last year's forecast, a lot of attention was focused on issues in Washington, including budget and trade deficits. Although there continues to be concern over those issues as they pertain to the long term, they are much less a factor in 1987 forecasts.

The economists generally expect to see some progress in both the budget and trade deficits. They agree the budget reduction is unlikely to reach the levels set by the Gramm-Rudman resolution, but some believe the budget deficit will be somewhat less in 1987 than in 1986.

"It will be the first time in a long time we've seen a decline. But more has to be cut from the budget," Deaver says.

Prebe says the trade deficit will remain at 1986 levels and not be a further drag on the economy. His reasons: a weaker U.S. dollar; stable oil prices; an overall increase in world trade; major trading partners — West Germany and Japan — buying more from the U.S.

Hilty sees little likelihood of a turnaround in the trade and budget deficits, but grants they won't necessarily impact the 1987 economic forecast. "They continue to be worrisome," he stresses, "but the effect is longer term in that they take jobs away from the U.S. They've been eating away jobs for the past six years and will continue to do so."

Beyond 1987

Looking beyond 1987 and into 1988, the economists see more of the same. And again, they say, that's not all bad.

"I see no reason for a change of course," says Munro. "By the middle of 1987 we'll be able to tell if 1988 will be slightly better or slightly worse than 1987; 1988 will depend on how quickly the patterns predicted for 1987 unfold. There's no doubt the patterns will develop as we expect in 1987. How quickly is the question."

Deaver also predicts more of the same in '88. "If anything," he says, "we'll see slightly faster growth. The longer we have slow, steady growth with excess capacity and prices and wages increasing at a slow rate, the longer the economy can continue its recovery. While recovery doesn't have a lot of steam, it doesn't seem to be running out of steam." ■

Western Europe enjoys a surge in sales — but how long will it last?

By Ian Robertson

Reports of record sales are arriving from Western Europe's 17 new-car markets. Estimates show volume in 1986 climbed nearly 800,000 units above 1985 and topped the 11-million mark for the first time in history.

Western Europe's new-car registrations are estimated at 11,287,000 units in calendar 1986, 7.3 percent above 1985's 10,517,000.

The surge in automobile demand stemmed from generally brightening economic horizons across Europe. In the wake of falling oil prices, consumers watched inflation dwindle — to negative levels in the case of West Germany and the Netherlands.

At the end of 1984, inflation among Europe's leading economies was running at an annual rate of 5.3 percent. A year later it dropped to 4.6 percent. By the closing weeks of 1986 it dwindled to 2.0 percent.

Meanwhile, a rise in average earnings continued to outstrip inflation by a comfortable margin, boosting consumers' real spending power.

At the close of 1986, average earnings across Europe's leading economies were showing a 3.9-percent annual gain — twice the level of inflation.

West Germany alone regularly absorbs almost one-fourth of Europe's new-car sales. Demand there boomed throughout 1986, with the earnings-inflation ratio playing a key role. Registrations in 1986 appeared certain to hit record levels as buoyant West German consumers celebrated average earnings that rose 4 percent while inflation receded to a negative 1.1 percent.

Another leading European market, the United Kingdom, also was poised to set a car-sales record in 1986. Cash-rich consumers are enjoying a 7.5-percent increase in average earnings while inflation has tumbled to 3 percent.

Meanwhile, interest rates in Europe were moderate in 1986, easing credit purchases and acting as a disincentive to savers.

In West Germany and neighboring market Switzerland the 1986 economic upturn coincided with resolution of the debate over exhaust-emission standards. In 1985, uncertainties over the standards prompted many customers to postpone new-car purchases. Release of that pent-up demand sent sales soaring in 1986.

At the dealer level, intense competition has pushed Europe's new-car prices down — in many cases to their lowest level in real terms in about two decades.

At the same time, with margin-hungry exporters of Japanese cars seeking some respite from the dollar-yen ratio, price discounting is widespread. Reductions of up to 40 percent on list price are reported for some volume deals.

Dealer incentives have led to pre-registering vehicles in attempts to achieve target-related bonuses. The models are then sold as demonstrators or "cancelled fleet orders" at knocked-down prices. In addition, there are cut-price credit deals, "no-cost extras" offers and even guaranteed price buy-back arrangements from dealers.

Meantime, new-model intros are being accelerated. In an attempt to stay a step ahead of the competition, European automakers have reduced the average life cycle of volume-production models from seven or eight years to five.

Nearly half of the additional 800,000 new-car sales generated in Western Europe in 1986 can be traced to West Germany's booming market. France, Italy, the Netherlands and the U.K. accounted for one-third of the additional sales. Significant growth also was recorded by Denmark, Switzerland and the Benelux markets.

Source: The Economist Publications (European Motor Business)

Only Greece, Ireland and Sweden failed to post sales gains. In Greece this is attributed to government austerity. In Sweden, record sales in 1985 were followed by a cyclical downturn. Ireland's economy remained sluggish.

Early indicators for 1987 suggest there will be a general leveling off in demand. A slight dip in European sales below the 11 million mark is forecast, with another decline in 1988.

With major markets now near saturation, a cyclical downturn is expected to follow the record 1986 sales in West Germany and the U.K. However, markets in France and Italy are not expected to peak until sometime this year.

Along with a cyclical dip in general auto-replacement demand, the post-emissions boom will tail off in West Germany this year, while elsewhere economic prospects will begin to moderate.

The outlook for oil prices remains stable. Any attempt to push prices up would largely depend on an agreed cutback in production by OPEC, and that does not appear likely. An OECD import price of $15 a barrel is expected to be maintained through 1987.

With the oil-price bonus now absorbed, however, signs are that inflation could begin to climb again in Europe, forcing consumers to reassess their priorities.

West Germany's negative inflation is expected to revert to a modest 1.5 percent increase in 1987.

In France, price controls are scheduled to be dismantled this year, but 2.2-percent inflation is expected to rise to 3 percent.

In the U.K., inflation is forecast to expand to about 5 percent from its current 3-percent level.

Among the major countries, only Italy is expected to see inflation slow down in 1987.

Meantime, official resistance to high wage settlements is growing, which is expected to reduce the increase in real earnings enjoyed in 1986. Credit-laden consumers have little further capacity to take on new commitments. At the same time, they are faced with the prospect of interest rates edging up.

In early December the Bank of France raised interest rates by 1 percent. In mid-October, the British government's resistance to higher interest rates finally gave way; the base rate was raised from 10 to 11 percent to defend sterling.

In West Germany the Bundesbank fiercely resisted pressure for lowering interest rates prior to the January elections.

Thus, Italy looks like it may be the exception this year, with further reductions in the country's high interest rates a prospect.

Exchange-rate improvements are poised to send new-car prices on some European markets reeling. After the climb of the yen, the deutschemark is rapidly gaining strength. In the U.K. this led to warnings of 15-percent price rises in the pipeline. With Germany's leading role as a component supplier to other manufacturers, the impact of this development would have a domino effect on other countries' production prices.

In West Germany there are rumblings again from the metalworkers' union, IG Metall, which earlier was responsible for bringing the country's output almost to a standstill. An opening DM 11 billion ($5.5 billion) tax cut in 1986 helped boost consumption, but now has been absorbed, and calls to bring forward outstanding 1988 tax cuts have been ignored.

In the U.K., modest pre-election tax cuts are expected in the March 1987 budget, but the underlying 7.5 percent growth in average earnings is under attack. After two years of record car sales, demand is expected to slow after the second quarter of this year.

Prominent in France's draft 1987 budget was a 27-billion franc ($4 billion) cut in corporate and personal taxation in 1987, with a further FF 23 billion scheduled for 1988. To some extent these will be offset by higher social security contributions; but a positive trend in wages-prices is expected to support continued growth in the country's car market in 1987.

With interest rates and inflation on a downward trend, new-car demand in Italy is expected to remain strong.

The inflation rate in Spain remains above average at 9.3 percent, but real growth in wages has been maintained so far. High base rates (14.5 percent) could fall, but vehicle demand was distorted by a speculative boom in new-car purchases late last year.

Apart from France and Italy, only the marginal markets of Austria, Greece and Ireland are expected to show an improvement in 1987 new-car sales. ■

Car-truck sales smash record in

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — For anyone covering news about the auto industry in the United States, 1986 was a bumper-crop year. It had everything from record sales of imports and distress selling of domestics through cut-rate financing to price increases and limited-option price leaders.

It was a spotty year, not a boom period, but one in which some sales high points were reached.

Total vehicle sales in 1986 rose to a record 16,312,310 units, up 3.75 percent from the 15,721,966 units sold in calendar 1985, according to data gathered by Automotive News.

New-car sales rose above the 11 million mark for the second year running — totaling a record 11,452,310 units against 11,041,513 units delivered the year. The previous record was 11,446,589 in 1973.

New-truck deliveries, largely a reflection of increasing versatility of the rugged vehicles and husky sales of minivans, climbed to an estimated 4,860,000, up 3.84 percent from 4,680,453 in 1985. The 1986 figure is an estimate because all medium-duty and heavy-duty numbers had not been reported at presstime.

Where the market was December, 1986

	Total Sales	Pct. of Total

LUXURY	855,553	7.47%
IMPORT	3,237,647	28.27%
TOTAL	11,452,310	100.00%

Final figures for light trucks were 4,601,606 in 1986, up 4.63 percent from 4,397,705 in 1985.

Sales of imported cars seemed to shoulder aside woes stemming from major switches in dollar-yen relationships. They climbed steadily through the year to close at a record high in spite of price increases that were the result of the dollar's loss against the yen.

Import sales last year by reporting makes totaled 3,237,647 units, up 14.12 percent from the 2,836,973 units sold in the preceding 12 months.

The sales total included 8,214,663 domestic cars in 1986, up 0.12 percent from the 8,204,540 units sold a year earlier.

Chrysler Motors sold more vehicles in the United States than ever before. Tom Pappert, vice president of sales, said his company was looking for a strong showing in 1987.

The company finished the year with domestic car sales at the third highest in Chrysler's history.

Said Pappert: "We have more all-new product coming in 1987. For starters, the V-6 Plymouth Voyager and the Dodge Caravan will be added to our mini-wagon line in January and the Chrysler LeBaron Coupe debuts in February with more new products each month for the first half of the year."

General Motors' car sales were the best since 1979, and Chevrolet, Pontiac and Cadillac increased sales over 1985.

"We expect 1987 will be a year of continued good business for the industry, said Claude N. Moore, vice president in charge of the GM Customer Sales and Service Staff. "The economy will continue to expand, personal income will grow and consumer confidence will remain at a high level."

Moore added: "GM will have a number of all-new vehicles in dealer showrooms between now and spring, including Chevrolet Corsica and Beretta, Pontiac Bonneville and LeMans, Cadillac Allante and the all-new Chevy and GMC pickups."

Pontiac General Manager J. Michael Losh called 1986 an outstanding year. "Not only was it our best year since 1978, it was only 56,000 sales short of our record of 897,000 set in 1985," he said.

Losh added: "Pontiac continues to be a strong force in the domestic automobile market despite fluctuating sales throughout the industry. We've maintained a strong selling posture."

Sales of the Pontiac Grand Am and 6000 set records in 1986.

Oldsmobile General Manager William W. Lane said 1986 was the fourth year in which his division has sold more than one million cars. It was Oldsmobile's second best year, topped only by the record set in 1985, he said. Rod Hayden, senior vice president and general manager, Mazda Motors of America (Central) and James Trado, senior vice president, Mazda Motors of America (East) issued a statement on their organizations' record car and truck sales.

"Strong customer acceptance of our passenger cars and trucks were responsible," they said.

Because of holiday shutdowns across the industry, December sales reports were delayed.

In the 10-day period, Dec. 11-20, domestic-car sales climbed 27.56 percent from the year-earlier period to total 210,654 units. They were up sharply against 165,132 a year earlier, but they were well below the record of 256,981 units set in mid-December 1972.

Honda led the way with a startling 107.44-percent sales gain in sales of its U.S.-built models; capacity at its Marysville, Ohio, plant was expanded this year. Ford Motor Co.'s sales rose 65.64 percent, led by Taurus and Sable. Nis-

busy year

san's sales of cars built in this country rose 50.52 percent while Chrysler's rose 23.15 percent. GM deliveries climbed 11.48 percent in the 10-day period.

Declines in the middle 10 days of the month were posted by American Motors with a drop of 36.57 percent and Volkswagen's domestically built cars with a falloff of 27.29 percent.

Toyota, which began producing the Corolla FX-16 in this country in 1986 via New United Motor Manufacturing Inc., a joint venture with GM, reported sales of 933 units in the 10-day period.

For the month's closing 10 days, gains from domestic-car sales levels in the year earlier were reported by Honda with a rise of 338.36 percent in its U.S.-built cars, Nissan with an increase of 48.34 percent in its U.S.-made cars and Ford Motor with 26.10 percent. Improvements also were reported by Chrysler Motors with a gain of 14.59 percent, Volkswagen with a 6.8-percent increase in sales of its U.S.-made cars and GM with 4.38 percent.

A decline in sales was reported by AMC which had a drop of 48.56 percent in the month's final 10-day period. Newcomer Toyota reported sales of 2,825 units.

For all of December, domestic-car builders filled a mixed bag.

Strong sales improvements were recorded by Honda with a gain of 183.43 percent compared to a year ago and Nissan with 46.30 percent. Ford had a sales pickup of 43.02 percent for the month. Chrysler Motors was up 24.09 percent and GM rose 4.90 percent.

Declines were reported at 42.69 percent for AMC and 4.76 percent for VW.

Truck sales soar to peak of 4,680,000; Ford leads

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck sales in 1986 set a record for the third consecutive year because of the continuing popularity of light trucks.

Overall, the industry sold an estimated 4,860,000 trucks last year, up from 4,680,458 in 1985 and 4,092,803 in 1984.

Final numbers from medium and heavy-truck manufacturers were not available.

According to manufacturers' reports, light-truck sales totaled 4,601,606 last year, up 4.6 percent from 4,397,705 in calendar 1985. The 1984 total was 3,815,728.

In the race for industry leadership, Ford recaptured the title it lost to Chevrolet in 1985. Ford sold 1,381,438 trucks in calendar 1986 vs. Chevrolet's 1,247,594.

Ford's total truck sales were up 8.6 percent from 1,271,809 in 1985.

Chevrolet's total sales were off slightly from 1,300,130 in 1985.

The F-series full-sized Ford pickup, with 544,969 sales, was the best-selling nameplate in the auto/truck industry.

Chevrolet's full-sized pickup line, with 443,051 sales, was the top-volume line at General Motors.

Jeep had its second consecutive record year with sales of 207,514, up 14.4 percent from 181,389 in 1985.

GMC's total light, medium and heavy sales of 345,047 were off from 1985's record 352,129.

Similarly, GMC's light-duty total of 306,580 was off from the record 312,274 in 1985.

Chrysler Motors, with 596,159 sales, was off by a small percentage from its 606,388 sales in 1985.

Most imports, with the notable exception of Nissan, also set records.

Toyota hit a new high of 384,916, up 16.7 percent from 329,930 in 1985.

Mazda's sales of 157,127 trucks were up by an even more dramatic 36.1 percent from 115,464 in 1985.

Isuzu hit a new high of 88,720, up from 78,149. Mitsubishi reached 34,985, up from 26,739.

And Suzuki, in its first full year on the market, sold 47,732 Samurais compared to 2,646 in 1985.

Nissan, which went through a phase-in, phase-out transition of old and new truck models last year, saw its sales fall to 223,551 from 255,601 in 1985.

Industrywide December sales were extremely strong, as many truck buyers rushed to take advantage of tax benefits before the new law came into effect.

The industry retailed 413,689 light trucks in December, up 15.4 percent from 358,604 last year.

Runaways on rise?

Safety group warns of heavier toll in '87

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Center for Auto Safety is predicting more "sudden acceleration" problems in the coming year because of increased use of electronic controls in 1987 models.

In a year-end statement, the safety group said the problem has been occurring as drivers shift from park to drive or reverse in computer-equipped cars.

According to the center, sudden acceleration problems in 1986 caused 400 accidents resulting in 200 injuries and 12 deaths. Half of those, it said, were in Audi 5000 models, which, the group said, have a "runaway" rate 10 to 30 times worse than other models.

In addition, NHTSA is investigating sudden acceleration in 1982-85 General Motors J-cars, 1980-85 Nissan 280-Z/300-Z cars, 1981-84 Toyota Cressidas and the 1986 Mercedes 300-E.

While NHTSA has dropped investigation of many sudden-acceleration complaints, there are two "runaway" incidents that the safety group has asked NHTSA to consider. They are:

- On Oct. 11, 1986, Un Ha Choe, of Lexington, Ky., was killed when, for the second time that year, her 1985 Audi 4000-S allegedly accelerated unexpectedly and crashed. Audi had no immediate comment.
- On Dec. 30, 1986, a Nissan 200-SX driven by Sara McLeod of Lake Charles, La., allegedly went into reverse at a Dallas mall and killed a pedestrian.

Sam Cole, a spokesman for the Center for Auto Safety, said the Department of Transportation refused requests to investigate the 200-SX. However, Hal Paris, a spokesman for NHTSA — an arm of DOT — said a Texas A&M engineer has been directed to examine the 200-SX and report back to the agency.

Cole said his group has forwarded complaints to DOT claiming the Datsun 280-ZX and 300-ZX can suddenly accelerate out of control.

Japanese consumer groups investigating the problem blame the sudden acceleration on a faulty cruise control system in Nissan models, but the manufacturer disagrees, said Cole.

William Pauley, a spokesman for Nissan in Los Angeles, said the company is unaware of problems with the 200-SX and just learned of the Dallas accident.

"We intend to investigate to the fullest extent we're allowed, but as far as I know there is no problem with the car," Pauley said.

The safety center also said that homicide charges are pending against drivers in two Boston sudden-acceleration cases, one involving an Audi 5000, the other a 1985 Oldsmobile Cutlass Supreme. Earlier in 1986, the center said, a Chicago woman driving a Nissan Z-car was acquitted of homicide in an accident that killed two people.

Ratings plunge for GM, Smith, but soar for Ford, Petersen

NEW YORK — General Motors has taken another fall — this one in Fortune magazine's ranking of most-admired corporations. GM Chairman Roger B. Smith fell just as far — from The Gallagher Report's 1985 ranking as one of the 10 best chief executives to the newsletter's 1986 list of the 10 worst.

Meanwhile, Ford Motor Co. and its chairman, Donald Petersen, moved to the top of both publications' rankings.

GM plummeted from 16th to the 109th spot in the annual Fortune ranking of 300 companies. The poll was published in the Jan. 19 issue.

The magazine cited sagging GM profits, cutbacks in Saturn production and the planned closing of nine plants and parts of two others employing some 29,000 workers.

GM dropped in all eight attributes of reputation rated by Fortune. Most notably, GM's quality of management sank from No. 13 to No. 153.

The Fortune poll is based on the opinion of more than 8,200 business executives, outside directors and financial analysts. The individuals were asked to rank companies in their industries based upon eight measures of reputation.

The eight attributes are: quality of management; quality of products or services; innovativeness; long-term investment value; financial soundness; ability to attract, develop and keep talented people; community and environmental responsibility; and use of corporate assets.

Ford Motor Co. ranked first among motor vehicle and parts manufacturers, based on the success of its Taurus and Sable models. Ford was ranked second last year. GM had held the top spot last year, but fell to fourth this year.

Moving up one notch each from last year: Chrysler Corp. to second place, Dana Corp. to third, Paccar to fifth and Borg-Warner Corp. to sixth.

Mack Trucks, unranked last year, was No. 7 this year. Fruehauf, Navistar International and American Motors Corp. retained eighth, ninth and 10th places, respectively. AMC was the lowest ranked auto company on the full listing of 300 companies, taking the 298th spot.

The Gallagher Report, a New York-based weekly executive newsletter, said Smith was picked for its list of worst executives mainly because of the $750 million buyout of H. Ross Perot, former GM director and chief executive officer of Electronic Data Systems, and three Perot associates.

The same newsletter last year named Smith as one of the 10 best CEOs for companies with annual sales over $1 billion. In 1983, the newsletter placed Smith on the 10 worst list because GM did not recall X-cars with alleged brake problems.

Named to the Gallagher top 10 for 1986 was Ford's Petersen. The newsletter praised Petersen for Ford's consistent performance and for topping GM profits for 1986.

Eurotek/AMG in Arizona

SCOTTSDALE, Ariz. — Eurotek/AMG is the first AMG parts and installation center in Arizona. The firm will offer a complete line of AMG tuning and body enhancement products for Mercedes-Benz vehicles. AMG has U.S. headquarters in Westmont, Ill.

PRODUCTION

December build rises

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Production of domestic cars last month was the highest for any December in three years.

The month's output totaled 586,025, the best December since 1983 when 614,038 cars were assembled.

December's output was 0.55 percent below November's 589,253 but 8.31 percent higher than the year-ago month's 541,031.

Automakers built 66,909 cars during the final two working days in December (Dec. 22-23).

The first week of production for 1987 was targeted at 147,166 units, 15.20 percent below the year-ago week's 173,542.

This year's total of 147,166 cars is 37.59 percent below the 235,820 completed last year at this point. Production resumed Jan. 5 this year, Jan. 2 in 1986.

Last week's scheduled output was shared as follows: General Motors, 45.64 percent; Ford Motor Co., 28.28 percent; Chrysler Motors, 16.44 percent; Honda of America Manufacturing Inc., 4.81 percent; New United Motor Manufacturing Inc., 2.85 percent; and Nissan Motor Manufacturing Co., U.S.A., 1.98 percent.

American Motors' Kenosha, Wis., plant and Volkswagen of America's Westmoreland, Pa., plant were down last week for inventory adjustment. The plants are expected to resume output today (Jan. 12).

The following GM plants will be until Jan. 19 for inventory adjustment: Flint, Mich.; Fairfax, Kans.; Pontiac, Mich. (Fiero and G-cars); Norwood, Ohio; and Van Nuys, Calif.

Ford slated overtime Saturday (Jan. 10) at its Dearborn, Mich., plant.

Saturday overtime was scheduled at Chrysler's Belvidere, Ill.; Newark, Del.; and Sterling Heights, Mich., plants. Those plants are slated for daily overtime this week (Jan. 12).

Trucks open '87 on higher note

Returning to work after the holidays, domestic truckmakers scheduled output of 75,983 units last week, 8.73 percent more than the year-ago week's 69,882.

The last two days of production in 1986 (Dec. 22-23) totaled 29,141.

December's truck build of 234,774 was 7.70 percent below November's 254,380 and 2.72 percent below the year-ago month's 241,341.

Ford Motor Co. slated overtime Saturday (Jan. 12) at its Wayne, Mich., and Kansas City, Mo., plants.

Big December for Canadian cars

December's auto production in Canada was the highest for that month in eight years.

The month's output totaled 82,894, the best for any December since 1978 when 85,377 cars were built.

December's production was 13.98 percent below November's 96,366 but was 11.07 percent more than the year-ago month's 74,634.

Automakers assembled 9,360 units in the final two days of 1986 production (Dec. 22-23).

The makers opened the year by scheduling production of 17,158 cars last week, down 9.59 percent from the year-ago week's 18,979.

The year's total of 17,158 is down 31.93 percent from the 25,205 completed at this time last year.

December's truck output of 46,943 was 3.69 percent below November's 48,746 and 18.84 percent below the year-ago month's 55,790.

Production for the last two working days of 1986 totaled 5,013 trucks.

Last week's targeted truck output of 15,781 was 13.00 percent below the year-ago week's 18,139.

NHTSA told to fine-tune operations

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Recommendations to improve NHTSA operations have been made by the Department of Transportation Safety Task Force.

Suggestions for "fine-tuning" NHTSA's work include:

- Changing the language now required in safety-related defect recall letters to make it simpler and more comprehensible.
- Trying to reduce the response time to legal petitions for reconsideration to meet the 120-day requirement.
- Speeding up the continuing review of the headlighting requirements of Standard 108.
- Reviewing other federal standards where there is technological development to ensure that use of new designs is not inhibited.
- Maintaining an active enforcement presence by ensuring testing for as many of the safety standards as possible.
- Making sure that the agency's research and development program provides direct support for setting standards.
- Revising the agency's National Accident Sampling System to provide more useful data on vehicle crashworthiness.
- Reconsidering periodically which state programs are most effective in reducing accidents, injuries and deaths and then focusing state grants under the 1966 Highway Safety Act on those areas.

The Task Force concluded generally that NHTSA is serving the public with a highly professional staff.

Ford to repair imported trucks

WASHINGTON — Ford Motor Co. has told the Center for Auto Safety it will repair blown head gaskets on any Mazda-built 1.8-liter or 2.0-liter engine used in Ford Courier trucks it formerly imported.

But the company denied there is a problem with all 1978-82 Couriers. Ford said 54 percent of the trucks were equipped with Ford-built 2.3-liter engines.

In a letter to Ford Chairman Donald E. Petersen, the Center for Auto Safety had criticized Ford for not compensating owners for engine defects. The center said 345,000 1978-1983 Couriers are "mechanically identical" to Mazda's 1978-84 B-2000 trucks.

Last year, under pressure from the center, Mazda voluntarily recalled those trucks. Mazda agreed to a 6-year/60,000-mile warranty on the head gaskets, reimbursement for owners who already had had their engines repaired, notification of owners by first-class mail and a one-year period to make claims for past repairs.

John P. King, service engineering office manager, Ford Parts and Service Division, said the company imported only 330,000 trucks during the 1978-82 model model years, not the 345,000 claimed by the center. Also, no trucks were imported during the 1983 model year, he said. Moreover, only 46 percent of them had Mazda-built engines, he said.

General Motors' new plastic-body all-purpose minivan (APV) scheduled to go into production in 1989

HOPEFUL: *GM Tarrytown workers approve pact in bid to win production of minivan*

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

UAW members at Local 664 in General Motors' North Tarrytown, N.Y., plant approved a streamlined labor agreement reducing job classifications from 700 to two within the production and non-production categories. The two classifications are team leader and team member.

The local union expects that the move will win GM's new plastic-body all-purpose minivan (APV) for Tarrytown.

The vote on the local agreement, which includes the team concept of production, was 2,407 to 589. The plant employs 4,000 workers. The vote was conducted last Wednesday.

Ray Calore, Local 664 president, said GM told the union that North Tarrytown would be in a good position to get the minivan if three elements were put in place.

Those elements were a structured quality improvement program, state funds for training and infrastructure development and a new labor agreement.

Calore said those requirements have largely been met. "We're expecting to learn any day now that we've been chosen to build the new minivan," he said.

A GM spokesman said that the new labor agreement "certainly enhances" Tarrytown's chances of getting the minivan. "We're still working feverishly with the state and local governments," he said, "but we have made significant progress."

GM is expected to make a decision soon on which plant will build the minivan, he said. The new front-drive APV is scheduled to go into production in 1989 and will be sold by Pontiac and Chevrolet. Plants in Pontiac, Mich., and Framingham, Mass., are also said to be under consideration for the vehicle.

Calore said that job classifications at North Tarrytown were reduced from about 700 to two within production and non-production functions. Non-production includes unskilled workers, material handlers and skilled tradesmen.

He said the two-classification framework allows the flexibility of adding other functions as needed — such as computer operators.

He said the team concept of production at North Tarrytown will "not be Japanese style." Calore explained that Japanese teams perform the work of a member who is absent, whereas relief men will be available for North Tarrytown teams.

Team members will have to become proficient at one other job besides their own within their team.

The team concept involves less supervision, and workers will be directly responsible for their jobs.

He said that getting the minivan would mean that the entire North Tarrytown workforce would undergo training for two-to-four-week sessions during a two-year period.

They would be trained to work with computers and robots, and welders and solderers would be trained to handle plastic and fiberglass, Calore said.

He said that about 150 GM employees from the Job Bank at the Massena, N.Y., foundry and the Linden, N.J., assembly plant would replace the North Tarrytown workers who were in school.

Ford may top GM in profits through 1988

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. will earn more than General Motors for an unprecedented three consecutive years, according to auto analysts.

Ford has not topped GM in earnings since 1924. For the past several months, however, analysts have predicted that Ford would earn more than GM in 1986.

What's more, analysts surveyed by Automotive News unanimously agreed that Ford would repeat that feat in 1987. Of the analysts who would speculate on 1988, all but one predicted that Ford would have higher earnings than GM again; the analyst who disagreed projected Ford and GM earnings would be within $200 million of each other.

The analysts say that the Big Three will report combined profits of $6.9 billion for 1986, down 15 percent from 1985's $8.1 billion. For the fourth quarter of 1986, they expect the Big Three to report combined earnings of $2.2 billion, down 32 percent from 1985's fourth-quarter total of $1.5 billion.

Ford will report earnings of $3.1 billion for 1986, while GM will report earnings of $2.6 billion, according to an average of analysts' forecasts. For Ford, that would be an increase of 24 percent over 1985 profits of $2.5 billion. For GM, it would be a drop of 35 percent from 1985's $4.0 billion. Chrysler is expected to report earnings of about $1.2 billion in 1986, down 25 percent from 1985's $1.6 billion.

EARNINGS PREDICTIONS

	GM	Ford	Chrysler
Fourth quarter			
1986 (millions)	$ 550	$868	$275
1985 (millions)	1,252	720	215
Full year			
1986 (billions)	$2.6	$3.1	$1.2
1985 (billions)	4.0	2.5	1.6
1987 (billions) ..	$2.3	$2.9	$1.2
1988 (billions) ..	$2.3	$2.7	$1.2

Source: Average of analysts' forecasts.

Chrysler and GM will announce year-end financial results Feb. 5. Ford and AMC will issue financial reports later in February.

Ford will post profits of $2.9 billion in 1987 and $2.7 billion in 1988, based on the average of analysts' forecasts. GM will report earnings of $2.3 billion for 1987 and 1988, while Chrysler earnings will be virtually flat for the next two years at $1.2 billion, according to the analysts.

While analysts unanimously agreed Ford would top GM in 1987 and most predicted the same pattern for 1988, there was a wide spread in forecasts for 1987 and

GM trims output — is it enough?

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has scaled back its first-quarter car production schedule, but analysts say it is not enough.

GM's first-quarter estimate has been cut by 35,000 units to 1,087,960. But GM's official production forecast does not yet include the cars that will be lost because of its planned cutback at the Leeds, Mo., plant. That will trim nearly 14,000 more cars from GM's first-quarter schedule.

GM will have trimmed nearly 49,000 cars from its previous schedule for the first quarter of 1987, and will build an estimated 1,074,072 cars in the quarter.

Its previous forecast for the period, issued in early December, called for GM to build 1,122,851 cars in the United States (Automotive News, Dec. 15).

But the cut may not be enough, analysts said.

"As usual, GM's eyes are bigger than its stomach," said Ronald Glantz, analyst for Montgomery Securities. For GM to bring its inventory down to a normal range, it will have to reduce its first-quarter schedule to about 960,000 cars, he said.

"GM cannot tolerate this share of total production," said Thomas O'Grady, Integrated Automotive Resources, Wayne, Pa. "We will have to see either incentives or some form of pushing sales."

GM's estimated first-quarter schedule is 7.51 percent below its year-earlier build of 1,161,300.

GM opened the month with a 72-day supply of unsold cars. A 50-day supply is considered normal. GM's sales are expected to remain slow, and GM may have to rethink even its revised first-quarter forecast.

The company is expected to offer incentives soon, and is looking at price rollbacks on selected models, dealer cash incentives and equipment packages instead of low-interest-rate financing.

O'Grady said he hopes GM does not cut

Audi formalizes 5000 recall, issues loaners

By Dave Zola
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Audi of America bowed to pressure from NHTSA and agreed to a formal recall to address sudden acceleration problems in 250,000 1978-86 model 5000 cars.

In addition, the importer will supply its 410 U.S. dealers with 1,000 new 1987 5000-S models to use as loaners for customers who respond to the recall.

Although NHTSA is investigating cars of several other manufacturers for sudden acceleration, Audi has the highest rate of reported incidents. There have been 800 reports involving Audi 5000s, resulting in six deaths and 250 in-

Studies clash on sales competence

By Geoff Sundstrom and Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTERS

New-car salespeople are adept at making customers feel at ease . . . or they are obnoxious louts who lose sales, depending on which of two new car-buyer attitude studies you believe.

The study that shows U.S. car buyers are comfortable in dealer showrooms was commissioned by the National Automobile Dealers Association and represents the first tangible results of the group's year-old, much-ballyhooed Project 2000.

The study that says objectionable sales personnel are costing auto dealers billions of dollars by driving customers to competing same-make dealers, is the work of J.D. Power and Associates, a California research and consulting firm.

The favorable information on consumer attitudes toward franchised car dealers is contained in a study by Detroit-based Market Opinion Research.

Complete results of the survey will be made public at this year's NADA convention in Las Vegas, Nev., Jan. 31-Feb. 3.

The survey of 1,106 individuals who bought a new vehicle within the last five years shows that "80 percent of the people were happy with the buying experience," according NADA President James Woulfe.

NADA supplied Automotive News with highlights of the survey showing:

- More than half of all buyers are satisfied with the way they were treated by the sales staff.
- Women were more satisfied than men with their buying experience.
- Durability, reliability, warranty and service were the primary factors in the decision to buy a particular model car.
- Dealer reputation was very important.
- Price was a very important factor.
- Location of the dealership was important.
- Test driving the car was considered a very important service offered by the dealer.
- Television and magazine advertisements were the media that caught the buyer's attention first.
- Salesmen and dealers were the most informative sources, along with manufacturers' brochures.
- Previous experience with the dealer was not considered important.

Woulfe said the survey was undertaken as the first step of Project 2000 "to find out what our customers really thought of us" without "using the material and the charts the manufacturers give us."

He said those who were surveyed "were actually people who were in on the transaction in the dealership showroom when the car was purchased."

Woulfe said the survey gave the association "somewhat a different picture from what we thought we were going to get; different from what we have been told by manufacturers and other poll takers who always kind of infer that people don't like to go to car dealerships or that people say it was a bad time of their life and they didn't enjoy themselves."

According to California-based Power, however, there are a number of people who do not enjoy certain aspects of the car-buying process

First Allante rolls off line at $54,700

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The first Cadillac Allantes rolled out of the assembly plant last week on their way to dealer showrooms, carrying price-tags of $54,700.

Cadillac General Manager John O. Grettenberger said the $54,700 sticker should "send a signal that the car took a lot of resources, technology and dedication to produce."

The only option available on the Allante is a cellular telephone, the price for which has not been established.

Grettenberger said the Allante price is in keeping with the car's primary competition, from Jaguar, BMW, Porsche and Mercedes-Benz. In addition, he noted that the Allante has no gas-guzzler penalty whereas its competitors do.

The Allante is priced just below its head-to-head competitor, the Mercedes 560-SL coupe-roadster, which is tagged at $55,300 and has a $1,500 gas-guzzler penalty, according to Cadillac's price comparisons.

Grettenberger said the ultra-luxury two-seater will be covered by an Allante Assurance Plan, which he said goes beyond a standard warranty, though he revealed few details.

The plan will not be limited to material and workmanship defects and will cover a longer period and higher mileage than any other GM warranty, Grettenberger said.

GLENN TRIEST

Cadillac General Manager Grettenberger and the division's new product

Details of the warranty will be announced when cars arrive in dealer showrooms in the coming weeks.

Peter Levin, Cadillac merchandising director, said initial advertising will be in regional publications where the car is launched.

The first batch of Allantes left the Detroit-Hamtramck plant last Thursday bound for Los Angeles, Miami, Dallas, New York and Chicago for sale beginning in early February.

A month later, the Allante will be introduced in New York and Detroit. And the following month, it will debut in San Francisco, Boston, Philadelphia, Houston, Washington and Atlanta. It then goes nationwide.

National television advertising kicks off March 30 with spots during the NCAA basketball final and the Academy Awards broadcast. One of the two 30-second TV spots focuses on the "energy" of the car in motion, Levin said. The second emphasizes interior and luxury.

National advertising will go in upscale magazines including Architectural Digest, Connoisseur, European Travel & Life, Town & Country and W.

Direct mail will be regional and will include videos sent to potential Allante buyers.

Cadillac plans to sell 4,000 through the rest of the 1987 model year and 7,000 in its first full year of production.

Buyers are expected to be between 35 and 55 years of age and have a median household income of at least $100,000 a year. They likely already own two luxury cars. Cadillac expects the Allante to appeal to men and women equally, and the division predicts it will draw buyers of other makes, not just traditional Cadillac buyers.

The Detroit-Hamtramck plant is producing about 10 cars per day and is scheduled to reach full production of 36 per day by April. The Allante bodies are built by Pininfarina in Italy and air-freighted to the plant for final assembly.

K-car America?

Lower-priced Aries/Reliant due soon if Omni/Horizon talks with AMC fail

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors is prepared to launch a $6,995 America version of the Plymouth Reliant and Dodge Aries if negotiations with American Motors to build the Omni and Horizon fail.

Dealer sources said the car would be introduced before March 31 if the plan becomes a reality.

Introduction of the America K-cars has been placed on hold during negotiations to move production of the Omni America and Horizon America to AMC's Kenosha, Wis., plant.

The company is not expected to bring out the Aries and Reliant America models if the AMC negotiations are successful because Chrysler wants only one America model on the market.

The America program relies on a reduced sticker price that is achieved through streamlined manufacturing techniques and standardized equipment packages.

The 1987 Aries and Reliant four-door sedans are priced at $7,879. Each carries a 3.9 annual percentage rate finance incentive until Jan. 20. The $6,995 America would be a four-door in the Aries and Reliant program, as it is for Omni and Horizon America.

Chrysler has said it must decide by Jan. 30 whether to scrap the strong-selling subcompacts or build them at the AMC plant. If finalized, the Chrysler/AMC contract would continue production of the Omni and Horizon for five years at a rate of 150,000 to 200,000 units annually, according to AMC President Joseph Cappy.

Production of the Omni and Horizon subcompacts is scheduled to end in early March at Chrysler's Belvidere, Ill., assembly plant. The plant is scheduled for an $800 million conversion to produce Chrysler's next generation of large, luxury front-wheel-drive cars.

Chrysler turned to AMC for possible subcompact production after reaching an unprecedented manufacturing agreement with AMC on large cars last year. AMC will assemble the Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury at the Kenosha plant beginning in late February.

Chrysler introduced the Omni and Horizon America last May, calling the models a test of the company's ability to produce a domestic subcompact profitably. The 1987 Omni and Horizon America are priced at $5,799.

Sales of the subcompacts increased from 155,973 in 1985 to 208,726 in 1986, prompting Chrysler to seek an alternate production site.

The America's share of the subcompact segment increased 3.2 percentage points, from 5.3 percent to 8.5 percent from May through December, according to Chrysler.

Suzuki succeeds Itagaki, American Isuzu's first chief

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

WHITTIER, Calif. — Masashi Suzuki was named president of American Isuzu Motors, replacing Yukio Itagaki, the importer's only previous leader.

Itagaki is returning to Japan as president of Diesel Kiki, the largest supplier for Isuzu Motors Ltd., and a company in which Isuzu holds majority interests.

Itagaki became American Isuzu's founding president in 1980 and has seen the fledgling importer grow to a national brand.

Suzuki's engineering background and previous position as director and general manager of Isuzu's Fujisawa plant will be helpful as a Fuji Heavy Industries-Isuzu Motors joint venture plant is constructed in Indiana.

Suzuki Seki

While American Isuzu has no direct control over the plant, Suzuki's manufacturing experience will help smooth the start of production, said Jack Reilly, senior vice president of American Isuzu.

Suzuki is considered a rising young star at Isuzu, company insiders said.

Several other changes were announced at the same time.

Takesi Yoshizawa, American Isuzu's senior vice president and chief financial officer, was elected to the board of directors of Isuzu Motors and will return to Japan to take up his new post. He is replaced by Hidehiko Seki, who has been a motor vehicle division manager for C. Itoh & Co.

Jerry O'Connor, previously southwest regional manager, rejoins the headquarters staff as national field operations manager. He takes a post that has been vacant since Bill Miller moved over to corporate operations manager.

Don Bruen and Greg Sedoff switched positions. Bruen is the new regional manager for California. Sedoff becomes manager in the central region. Bob Reilly was named southwest regional manager, replacing O'Connor.

Joe Totaro succeeds Reilly as sales administration manager. Totaro's old post of regional sales manager for California is filled by Tom McDonald. Jim LeVeck becomes distribution manager, replacing McDonald.

Jon Lezon, who has been assistant distribution manager in the southwest region, fills LeVeck's old position as zone sales manager.

Finally, Robert J. McClure, 66, vice president — parts and service, becomes American Isuzu's first employee to retire.

PROFITS

FROM PAGE 1

even more so for 1988 for all of the companies.

Analysts' estimates for 1987 earnings range from $1.5 billion to $3.0 billion for GM and from $2.1 billion to $3.6 billion for Ford. Estimates for Chrysler in 1987 range from just under $1 billion to $1.6 billion.

In 1988, the forecasts vary even more. Estimates for GM earnings range from $1.1 billion to $4.1 billion. For Ford, forecasts range from $2.1 billion to $3.6 billion. And for Chrysler, the range is from just over $500 million to just over $2 billion.

The diverse forecasts relate, in part, to analysts' predictions for the general economy and for the overall vehicle market.

"I'm arbitrarily assuming a recession in 1988," said Ronald Glantz, of Montgomery Securities. His forecasts for 1988 are among the lowest for all three companies.

Other analysts predict the opposite; they expect 1988 to be a better year than 1987. Some predict a recession in 1989; some do not see one at all.

Analysts' views of GM also contribute to the range of projections. Opinions vary widely on GM's ability — or inability — to solve its problems, primarily maintaining market share and cutting costs.

David Healy, of Drexel Burnham Lambert Inc., is the most pessimistic of the analysts on GM. "I've built in a very sharp decline in market share for GM," Healy said.

He said that for the first 10 months of 1986, GM's market share was 42 percent but plummeted in November and December to 34 percent. He expects GM's 1987 market share to be better than the 34 percent — but only slightly better, at about 36 percent.

Healy added that his earnings forecast for 1987 and 1988 would be worse except that he assumes GM will make significant cost cuts and downsize the company to match its smaller market share.

Arvid Jouppi, of Arvid Jouppi & Associates, is the most optimistic on GM for 1987 because he is confident GM will be able to boost its profit margins, which have sagged in recent years.

Arthur G. Davis, of Prescott, Ball & Turben, is the most bullish on GM in 1988 because of what he sees as a strong product line — perhaps "the best in the history of the company" — in a strong 11.5-million-car year.

For the fourth quarter of 1986, the analysis expect GM to report earnings of $550 million, plummeting 56 percent from 1985's fourth-quarter profits of $1.3 billion.

A $2.6 billion GM profit in 1986 would be among GM's worst years in the past decade, despite relatively good economic times.

GM's only years below $2.6 billion — and, in fact, below $1 billion — occurred during the three years of the recession. In one of those years, GM reported a loss. GM's best year on record was 1984 when profits hit $4.5 billion.

Analysts predict AMC will report a fourth-quarter profit of $10 million to $20 million, compared with a loss of $7 million in the year-ago quarter. It would be AMC's first quarterly profit since the fourth quarter of 1984, when the company earned $3.1 million.

The expected fourth-quarter profit would put AMC's 1986 loss between $90 million and $110 million, an improvement from the $125 million loss in 1985.

However, AMC President Joseph Cappy said last week that AMC's fourth quarter profit "is bigger than most analysts are predicting."

Cappy said AMC will lose money in 1987 though the first quarter is looking good. The company expects to make money in 1988.

Analysts predict AMC's 1987 loss will be $22 million to $55 million and 1988's profit will be about $110 million.

FORECAST

FROM PAGE 1

production further in the first quarter but opts for incentives. Costs should be cut in ways other than eliminating incentives, he said.

Domestic automakers' anticipated first-quarter output of 2,141,493 cars is virtually unchanged from last year's first-quarter figure of 2,128,067.

Ford Motor Co. plans to assemble 543,000 units during the quarter, 21.61 percent more than last year's first-quarter total of 446,505. The increase mainly reflects the fact that Taurus and Sable were not yet up to full line speeds last year at this time.

Chrysler Motors' forecast of 306,300 is down 17.98 percent from the 373,481 assembled in the same period last year. The reason for the decrease this year is that the St. Louis (No. 2) plant is down for model changeover.

Honda of America Manufacturing Inc. expects it first-quarter output to reach 87,789, almost double the 45,114 built last year.

Nissan Motor Manufacturing Co., U.S.A., plans 37,632 cars, up 74.89 percent from 21,517.

New United Motor Manufacturing Inc.'s estimate of 55,006 cars is 18.46 percent more than last year's 46,428.

Volkswagen of America has scheduled 27,200 units, up 28.48 percent from 21,169.

American Motors plans to build about 10,500 cars, down 16.35 percent from last year's 12,553.

Corrections

An article about U.S. tax reform in the Jan. 12 Automotive News Extra section should have said that the IRS will impose additional taxes, or tax penalties, if there is under-withholding of taxes as a result of the introduction of the new W-4 tax forms. The story incorrectly said there would be penalties for over-withholding.

Also, the year-end import-car sales totals were reversed in the table published Jan. 12. The correct 1986 import sales total, as revised last week by the car companies, was 3,239,805. The 1985 total was 2,839,168.

† Estimate

Domestic stockpile cut; imports fatten

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

The new year opened with stockpiles of domestic cars in the United States at levels well below those of Dec. 1 and Jan. 1, 1986.

The number of domestic cars in dealer hands and in transit on Jan. 1 represented a 58-day supply. That compares with 71 a month earlier and 73 on Jan. 1, 1986.

Stocks of unsold imported cars in the United States continued to climb in December, and on Jan. 1 totaled 473,165 units. That compares with the 455,303 that were in the pipeline on Dec. 1, and 338,315 on Jan. 1, 1986, according to estimates by Automotive News.

The import days' supply remained fairly static, standing at 38 days on Jan. 1, compared with 41 days on Dec. 1 and 43 days on Nov. 1. It was 28 days on Jan. 1, 1986.

Dealers across the country had reported strong sales in the closing days of 1986 as shoppers moved to buy before the loss of tax breaks.

Even as they described the strong sales surge in December, many retailers of domestic vehicles expressed fears January would be depressed because of the strength of the year-ending boomlet.

That lowering in sales has come to pass, as early-January sales reports issued by the domestics attest. The lowered car stockpiles should be welcomed by the retailing community with its floorplanning commitments and by manufacturing entities, some of which are playing a balancing act of plant closings and retail deliveries.

As of Jan. 1, domestic cars in stock totaled 1,506,557 units, a 58-day supply, compared with 1,531,295 units, a 71-day supply, on Dec. 1. On Jan. 1, 1986, there were 1,629,649 units, a 73-day stockpile.

General Motors cars made up the lion's share of the domestic inventory as January opened. They comprised 59.81 percent of the total. Next came Ford Motor Co. with 21.46 percent. Chrysler Motors cars accounted for 14.55 percent of the total; Volkswagen, 1.15 percent; and American Motors, 1.13 percent. Nissan's U.S.-built cars made up 1.16 percent of the domestically built car stock, Toyota, 0.47 percent, and Honda, 0.27 percent, according to Automotive News estimates.

By size class, the Jan. 1 domestic inventory showed: intermediate, 33.80 percent; compact, 23.54 percent; subcompact, 19.88 percent; standard, 12.81 percent, and luxury, 9.97 percent.

Toyota	34	36	23
Chrysler	69	55	61
Total Import Trucks	53	56	38
Total Imp. Vehicles	42	45	30

*Includes domestic trucks.

The inventory of imported trucks in this country rose in December to 202,207 units on Jan. 1, against 194,033 on Dec. 1 and 102,664 on Jan. 1, 1986.

Truck stock stood at 53 days on Jan. 1, compared with 56 days a month before and a 38-day-supply on Jan. 1, 1986.

The Jan. 1 combined imported-vehicle inventory was estimated at 675,372, compared to 649,336 on Dec. 1 and 440,979 on Jan. 1, 1986. The Volvo days-supply figure of 274 is artificially high. December sales were low because Volvo turned off its computers Dec. 19 amd received no sales reports from the field until early January.

As of Jan. 1, combined stocks of imported cars and trucks represented a 42-day supply, compared with a 45-day supply on Dec. 1 and a 30-day supply on Jan. 1, 1986.

Days' supplies are based on selling days, excluding Sundays and holidays.

This is how imported-car inventories were shared by nation of origin on Jan. 1: Japan, 69.14 percent; West Germany, 18.29 percent; other countries, 12.57.

Year opens with 38% sales drop; all domestic makers share in dip

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of U.S.-built cars fell 38.42 percent from the year-earlier level in the first 10 days of January.

A significant year-to-year falloff had been expected, however, because of a one-time surge in buying late in December. That rise in retail deliveries was due, in large part, to buyers taking tax advantages that were to disappear at the end of the year, dealers across the country said.

The decline in the opening sales period of 1987 was shared by all the major domestic makers and the foreign companies operating assembly plants in the United States.

Volkswagen of America suffered the biggest dip with a decline of 59.59 percent. American Motors had a drop of 47.74 percent, and sales for Ford Motor Co. fell 39.24 percent.

General Motors' sales were down 38.97 percent. Chrysler Corp. recorded a decline of 36.39 percent from year-before levels, and American Honda fell 33.18 percent. Nissan Motor Corp. in U.S.A. saw sales dip 12.55 percent. Toyota Motor Sales, U.S.A., was not selling U.S.-made cars in the 1986 period.

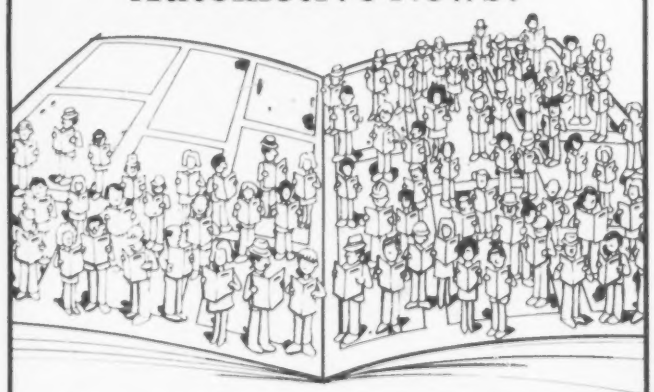
Why rely on word-of mouth when you can build a crowd in the back of Automotive News?



Auction advertising builds stong auction traffic.

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you get a big regional — or even national — attendance with an ad in the Auction Directory.

The Automotive News Auction Directory is a tried-and-proven tool for auctions looking to build attendance or promote a special function. That's what keeps our auction advertisers coming back for more. More results. When you want results . . .

Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

and take their business elsewhere to prove it.

The "walk" rates are highest at Honda, Porsche, Toyota, Mazda and BMW dealerships, according to Power.

The firm said that the makes with sales forces least likely to drive customers away are Lincoln, Mercury, Alfa Romeo and Dodge.

Only 62 percent of new-vehicle buyers in 1985 purchased from the dealer nearest their home, according to data collected by Power for its 1986 Customer Satisfaction Index.

Customers buying from less-convenient dealerships cited too-high prices as the leading factor (18 percent). But the second largest group giving a reason listed a turn-off by sales personnel (10.2 percent).

Projecting the Power data against 1986 new-car sales, more than one million purchasers bought from a different dealer because they were offended by sales personnel.

The study found that import dealerships have the worst record, and the customers most likely to walk are younger, better-educated and more demanding.

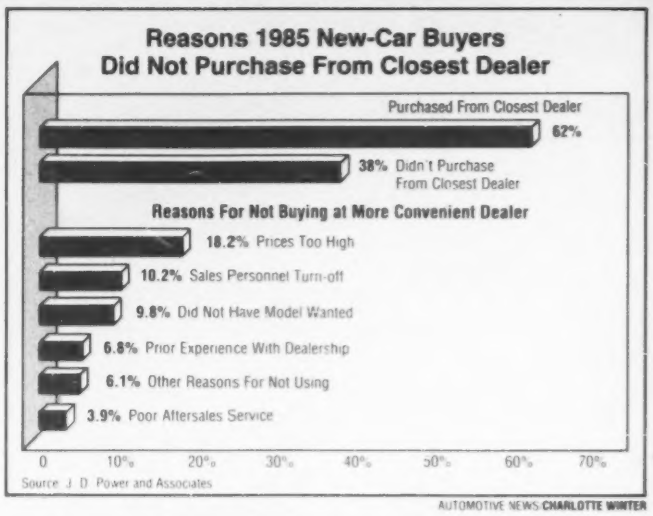
The report said that rude, pushy or unresponsive salespeople are most likely to be found at import dealerships where low inventories have led many salespeople to adopt a take-it-or-leave-it attitude.

Nine of the 10 makes with sales personnel most likely to cause customers to go to other dealerships are Japanese or German, according to Power.

There are exceptions. Mitsubishi and Isuzu were below industry average. And while Lincoln and Mercury had the best customer retention, Merkur, the Ford of Europe import sold by L-M dealers, was the sixth-worst despite sales far below initial expectations.

The Power data showed that males under 35 are most likely to walk because of sales personnel (14.4 percent), followed by men between 35 and 54 (13.7 percent), women under 35 (12.5 percent) and women 35 to 54 (12 percent).

Least likely to walk out because of sales personnel are women over 55 (5.7 percent) and men over 55 (9.7 percent), Power said.



AUTOMOTIVE NEWS CHARLOTTE WINTER

RECALL

FROM PAGE 1

juries, according to the Center for Auto Safety.

Audi initially had balked at NHTSA's Dec. 23 request for a statutory recall to fix the cars, but last week reversed itself.

Under the recall action, dealers will replace defective idle-speed stabilizers and install a shift-lock device designed to prevent the car's automatic transmission from being taken out of park unless the driver engages the brakes. Audi also will make a diagnostic check on systems associated with the idle speed stabilizer.

The importer had been installing shift locks and new idle speed stabilizers free under a service action, but this marks the first time a formal recall has been launched. Through the service actions, Audi has installed 70,000 shift locks. About 36,000 of the 60,000 affected 1985-86 model 5000s have received new idle-stabilization valves.

The company also will renotify owners of 1978-83 5000s, subjects of two previous recalls, to bring their cars in for adjustment of the brake pedal positioning and correction of a design flaw that could cause the carpeting to interfere with the accelerator.

Audi said it would go beyond the normal recall procedure of notifying 5000 owners by mail, launching a special telephone campaign to try to ensure that owners bring their cars back to dealers.

Audi also will conduct a follow-up campaign to see if customers are satisfied with repairs.

"We want to make sure to do everything we possibly can to make this the best recall in history and get the maximum number of people to come in," said John B. Damoose, Volkswagen of America's vice president in charge of Audi.

Audi said it hoped it would get a record response to the recall from owners. Generally, the industry gets about a 50-60 percent participation in a recall, Audi said.

NHTSA head Diane K. Steed said in an interview that she was pleased with Audi's decision to recall the 5000s.

"It appears that Audi is addressing all the known plausible causes of sudden acceleration," Steed said. "We fully expect the recall to reduce the number of sudden acceleration incidents."

NHTSA is continuing its investigation of the Audi 5000, but Steed said the agency probably would wait to see if the recall was effective before issuing its report.

The Center for Auto Safety argued that the recall would not solve the sudden acceleration problem. Audi should be forced to buy back the cars, the center said.

"We are dissatisfied with the recall, because the shift lock has been tried and it failed," said Clarence Ditlow, head of the safety center. "It can only doom more Americans to death and injury."

Ditlow said the center had six reports of sudden acceleration in cars equipped with shift locks. Audi has said that in those cases, the devices were installed improperly.

Damoose said there have been no reports of sudden acceleration in 1987 model 5000s, which have the shift lock as standard equipment.

Audi said it would not buy back the 250,000 1978-86 5000 models.

This week, Audi will begin a new print advertising campaign to help promote the shift lock and polish the 5000's image.

"We will do an ad specifically to sell the shift lock and urge its installation," Damoose said in an interview.

Audi currently is conducting a week-long series of one-on-one interviews between media representatives and Damoose in 15 cities around the country, in an effort to explain its recall action. The interviews are taking the place of a general press briefing Audi had scheduled for Jan. 16.

The decision to recall the cars is not a reversal in Audi's position on sudden acceleration, Damoose said.

"I don't think this is as much of a 180-degree turnaround of our position as much as it is 180 degrees from what people interpreted our position to be," Damoose said. "That's probably reflective of bad communication on our part.

"I guess if there is anything from a communications standpoint that we have to overcome, it's the interpretation by the public that we didn't care about our customers or that we were accusing them of making errors."

The unfavorable publicity surrounding the 5000 has had a major impact on sales during the past two months, Damoose admitted.

"Sales were impacted severely in December," he said. "It's hard to tell so far in January, because the industry is down so much due to the (December) payback period."

Some dealers reported a 30-80 percent drop in the sales of 5000 models during the past two months.

"December was not a killer month," said Rick Lamb, sales manager of Downtown Porsche-Audi, Los Angeles.

But some dealers said sales had actually increased.

"Ever since that story on (CBS News') '60 Minutes,' my sales have doubled," said Ernie Bartels, general sales manager for Green-On-Dirksen Porsche-Audi-Volkswagen, Springfield, Ill. "It's totally absurd. I'd like to see them run that '60 Minutes' piece again."

Washington group honors bureau chief Kahn

WASHINGTON — The Washington Automotive Press Association has selected Helen Kahn, Automotive News Washington bureau chief, as its person of the year for 1987.

The inaugural award was given to Kahn during a Jan. 8 dinner marking the first anniversary of the group.

PRODUCTION

Week's car output up

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled domestic auto production totaled 156,749, up 11.51 percent over the previous week's 140,567 but down 7.65 percent from the year-ago week's 169,728.

So far this year, 297,316 cars have been assembled, 26.74 percent below the 405,852 completed last year at this point.

Last week's targeted output was shared as follows: General Motors, 47.48 percent; Ford Motor Co., 27.35 percent; Chrysler Motors, 13.72 percent; Honda of America Manufacturing Inc., 4.67 percent; New United Motor Manufacturing Inc., 2.68 percent; Nissan Motor Manufacturing Co., U.S.A., 1.86 percent; Volkswagen of America, 1.28 percent; and American Motors, 0.96 percent.

AMC's Kenosha, Wis., plant resumed output last week (Jan. 12). The plant had been idle for inventory adjustment.

Volkswagen's plant in Westmoreland, Pa., also resumed production last week after being down for inventory adjustment.

The following GM plants were idle last week to reduce inventory and are scheduled to resume output today: Flint, Mich.; Fairfax, Kan.; Pontiac, Mich. (Fiero and G-cars); Norwood, Ohio; and Van Nuys, Calif.

GM's Lordstown, Ohio, plant remains down until Jan. 26 for inventory adjustment.

The GM Arlington, Texas, plant remains idle for installation of paint equipment. The plant is slated to resume production Jan. 16.

On Feb. 16, GM will reduce production at its Leeds, Mo., plant from two shifts at about 56 cars per hour to one shift at approximately 56 units per hour, affecting 2,000 workers.

The Leeds facility assembles the Buick Skyhawk, Oldsmobile Firenza and Chevrolet Cavalier. GM said the cutback is necessary to balance production schedules with inventories.

Ford slated Saturday (Jan. 17) overtime at its plant in Atlanta.

Chrysler's Belvidere, Ill.; Newark, Del.; and Sterling Heights, Mich., plants were scheduled for overtime Saturday and are also slated for daily overtime this week (Jan. 19).

Truck production rises to 77,657

U.S. truckmakers targeted production of 77,657 units last week, 4.46 percent more than the previous week's 74,342 and 8.43 percent more than the year-ago week's 71,619.

Year-to-date, 151,999 trucks have been built, 9.49 percent below the 167,938 completed last year at this time.

General Motors slated overtime last Saturday (Jan. 17) at its Detroit plant.

Ford Motor Co.'s Norfolk, Va., and Twin Cities, Minn., plants were scheduled for overtime Saturday.

Car-truck build rises in Canada

Last week, Canadian automakers estimated production at 17,210 units, 2.35 percent more than the previous week's 16,815 but 16.02 percent below the year-ago week's 20,494.

So far this year, 34,025 cars have been built, 25.85 percent below the 45,888 assembled last year at this time.

Truck production was scheduled at 16,175 units last week, 1.77 percent more than the previous week's 15,894 but 12.85 percent below the year-ago week's 18,561.

General Motors' Ste. Therese, Quebec, plant is expected to resume output today (Jan. 19). The plant had been idle for two weeks for inventory adjustment.

State money sought for AMC Kenosha

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

KENOSHA, Wis. — American Motors has asked the state of Wisconsin for $200 million in loan guarantees to renovate its Kenosha plant for building Chrysler Motors subcompacts and new Jeeps.

During a press conference at city hall here last Monday, AMC President Joseph Cappy and newly elected Wisconsin Gov. Tommy Thompson said they are "cautiously close" to signing an agreement wherein the state would fund about 80 percent of the $250 million needed to renovate the 85-year-old plant.

The loan guarantees, if approved by the Wisconsin House by Jan. 25, would mean new life for the Kenosha plant. AMC has discussed ending Renault Alliance production in 1989. After that, Cappy said, only the stamping and engine plant workers would remain without renovation.

The $250 million price tag does not include training costs or new equipment for the plant.

The renovation is contingent upon a lower-cost labor contract with UAW Local 72 by Chrysler's Jan. 30 deadline to find a new production site for its Dodge Omni and Plymouth Horizon. Those cars are being moved out of Chrysler's Belvidere, Ill., plant in March. Chrysler officials have said they will either build the Omni-Horizon in Kenosha or discontinue the models altogether.

AMC already has a 2½-year contract to build Chrysler M-body luxury cars in Kenosha beginning in late February.

UAW Local 72 President Rudy Kuzel said he is still unwilling to reopen the contract, which was modified last spring to win the Chrysler M-car contract.

Union officials from both the International UAW and Local 72 met with Thompson and state officials last week to discuss opening the contract. However, nothing was agreed upon during the meeting.

Kuzel expects the international union to request a membership vote in Kenosha in the next two weeks, however he said AMC must disclose what changes it wants in the agreement before a vote.

Cappy said AMC is looking to modify both the economic and working agreements of the 1985 Kenosha contract.

"We've got a contract in Kenosha that is competitive to what General Motors has now but is not competitive with what Mazda has in Flat Rock (Mich.) or what NUMMI (New United Motor Manufacturing Inc.) has," Cappy told Automotive News last week. He would not specify what concessions the company is seeking.

Under the AMC proposal, the automaker would build Alliance, Chrysler M-cars and Omni-Horizon at its lakefront and main plants in Kenosha. The renovated Kenosha plant could add about 6,500 AMC jobs and 9,500 spin-off jobs, according to Cappy.

Meanwhile AMC is continuing to negotiate with Chrysler to build 150,000 to 200,000 Omni-Horizon units annually in Kenosha over a five-year period. If an agreement is signed before Jan. 30, AMC could begin building the Chrysler subcompacts this fall.

Romanian cars spark controversy

Embassies disagree on U.S. distributor

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

Copyright, 1987, Automotive News

NEW YORK — A U.S. firm is soliciting and signing dealers for Romanian-built cars in the United States while Romanian officials on both sides of the Atlantic disagree about whether the company is authorized to import the cars.

Romanian Embassy officials in the United States say the company, Roman Motors Corp. of Miami, is not authorized to distribute the cars. But officials of Roman Motors and the Romanian Embassy in Switzerland say Roman Motors — through a complex web of international agreements — is authorized to market the cars in the United States.

While it was uncertain which Romanian government officials would ultimately prevail, Roman Motors President John Trotman said in an interview that he expected to have 100 U.S. dealers, mostly from the East Coast, signed by this week's National Automotive Dealers Association convention in Las Vegas.

Trotman said dealers were paying Roman Motors $59,500 at the time of signing for parts, signs and tools, and that they had to post letters of credit to cover six months' shipments of cars. One dealer source solicited by Roman Motors said the letters of credit were for $500,000.

Trotman said his company would market the subcompact Dacia, the four-wheel-drive Aro and the subcompact Oltcit beginning this spring. He said the Dacia and Aro would be displayed at the NADA convention and that his Swiss associates also would attend.

Meanwhile, officials of the Romanian Embassy in the United States insisted a contract to market Romanian vehicles in the United States had not been issued to Trotman or any of his European affiliates. But the Romanian Embassy in Bern, Switzerland, last Friday verified that Trotman has a contract with a Bern company, Sveltec Ltd., which is acting on behalf of the Romanian state export company, Auto Dacia of Pitesti, to sell the Romanian-built cars.

Trotman said his authority to market the cars in the United States was based on several cooperative agreements and he supported the claim by showing Automotive News a series of documents.

Trotman said the Romanian export company originally gave marketing rights for Romanian products to a company named Marimex

NADA

Record turnout of 23,000 expected; Iacocca to speak; 155 seminars set

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

It just grows and grows.

The 70th annual Convention and Exposition of the National Automobile Dealers Association, to be held Jan. 31-Feb. 3 in Las Vegas, is expected to be the biggest ever.

NADA said the 1987 convention will likely set records in the number of participants, exhibits and workshops.

As many as 23,000 franchised new-car dealers, truck dealers and representatives of allied businesses are expected to register for the four-day event at the Las Vegas Convention Center. The current high is 21,000 at New Orleans last year.

"We're looking forward to our most successful convention ever," said NADA President James B. Woulfe.

"Top management from America's greatest industry will be in the same place at the same time," Woulfe said. "We have a truly exceptional opportunity to discuss important business and transportation issues, challenges and opportunities."

All of the 10,300 available rooms reserved at NADA-approved hotels are booked. However, Las Vegas boasts 54,000 hotel rooms and procrastinating attendees who still are without reservations probably can find rooms at another inn, perhaps with assistance from the Las Vegas Convention Bureau.

As usual, this year's convention will feature prominent general-session speakers.

Lee Iacocca, chairman and chief executive officer of Chrysler Corp., will deliver the keynote address at the 3 p.m. general session on

Incentives, long warranty added by GM

By David Versical
and Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors launched attacks on two fronts last week to boost sagging sales and shore up its image on quality.

GM, which had pledged to avoid a repeat of last year's sales incentives as long as possible, succumbed to a growing industry trend and offered discounted options on Buick, Pontiac, Chevrolet and Oldsmobile models. It also matched Ford Motor Co. with a new wave of low-interest loans and rebates on its compact pickups and sport-utility vehicles.

In addition, GM announced that it will double the length of its warranty coverage to back up its contention that the quality of its cars has reached an unprecedented high.

The new plan provides a six-year/60,000-mile warranty on powertrains and six-year/100,000-mile protection against corrosion. All 1987 GM cars produced in North America are covered. The plan does not include trucks or Chevrolet's Sprint, Nova and Spectrum cars.

On Friday, just one day after GM announced the new warranty, four of GM's car divisions announced new retail incentives.

As expected (Automotive News, Jan. 12), the new incentives avoided annual-percentage-rate financing and focused on lowering transactional prices through rebates and equipment discounts.

Each division took its own approach on selected models. The Pontiac, Buick and Oldsmobile programs run from Jan. 24 to April 30. The Chevrolet program runs from Jan. 24 to March 11, and Cadillac did not announce new incentives.

Pontiac announced first. Its program includes equipment-package discounts and cash rebates, which it called "cash bonuses." The equipment-package discounts are $175 on the Fiero coupe; $875 on the Sunbird SE convertible; $325 on the Grand Am coupe; $50 on the 6000 sedan; $525 on Firebird; $275 on the Bonneville sedan; and $500 on Grand Prix. Package content varies by model.

The cash rebates are $500 on Fiero; $600 on the Grand Am coupe; $650 on Firebird and Grand Prix; $800 on the Sunbird SE convertible, 6000 sedan and Bonneville sedan; and $1,200 on the 6000 STE.

Oldsmobile offered a straight discount on optional equipment purchases, based on dollar volume, on Calais, Cutlass Ciera, Cutlass Supreme, Delta 88 and Custom Cruiser.

The discount, payable as a cash rebate, is $200 on option purchases with a manufacturer's suggested retail price of $500 to $999; $400 on purchases of $1,000 to $1,499; $600 on purchases of $1,500 to $1,-999; $800 on purchases of $2,000 to $2,999; and $1,200 on optional equipment purchases with sticker prices of $3,000 or more.

Buick adopted the same optional equipment rebate pay schedule for Skylark, Regal and LeSabre, plus Electra and LeSabre Electra Estate Wagon models, but exempted turbocharged models.

Chevrolet opted for rebates of

Sales to Japanese rise as suppliers learn rules

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

A number of U.S. auto suppliers are reporting an upsurge of business with the Japanese automakers in this country.

Leaders among those suppliers are Sheller-Globe Corp. and Johnson Controls Inc., which have landed business with all six transplants that are producing vehicles or are preparing to.

The immediate reasons for increased business from the Japanese are the growing number of transplants that are choosing suppliers and the change in the yen's value, which makes imported parts less price competitive.

Also helping has been a shift in the political climate,

Brazil's Mendes seeks U.S. ally in truck venture

By Rik Turner and Joseph Bohn
AUTOMOTIVE NEWS STAFF

Officials of Mendes Junior, Brazil's largest construction company, are trying to set up a joint venture with a major U.S. truck company to produce Brazilian components and possibly even vehicles.

They hope this production venture may also lead to export opportunities.

Mendes' primary interest is getting a steady flow of technology from its U.S. venture partner.

Mendes officials, led by President Murilo Mendes Jr., reportedly visited PACCAR and Navistar International officials in the United States to discuss their project.

Mendes considers Navistar the better prospect of the two.

Navistar uses Cummins engines extensively in its domestically built heavy-duty trucks. Cummins also has a plant in Brazil.

Industry sources said that Navistar currently has people in Brazil, discussing a new project.

As one source observed, "Something's going on, but nobody's talking about it."

A Navistar spokesman added that if conversations took place between Navistar and Mendes Junior officials, they " didn't occur at the senior level."

He said he had no knowledge of conversations between the two companies.

Mendes reportedly hopes to close a deal — and make an announcement — as early as Feb. 18.

Reportedly, a significant point in its discussions is the equity share that its U.S. partner would have.

Mendes officials reportedly want their venture partner to have about a 20 percent stake in the new operation — not so much for the capital but to guarantee a continuing flow of technology.

Nissan's new mini
Nissan Motor Co. has introduced the Be-1, a two-door sedan targeted at Japan's youth. It is based on a one-off car exhibited at the 1985 Tokyo Motor Show. A canvas-top model will be introduced in March. The car, which is 145.4 inches long, 63.2 inches wide and 56.8 inches high, features a a glued windshield and rear window and a body made rigid through dual-reinforced sills. Powered by a 987-cc gasoline engine, Be-1 models are priced between $8,500 and $9,500. A sales target of 400 units a month has been set.

Brazil plans automobile complex; talks with Japanese disclosed

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — The Brazilian government has announced plans for an auto industry complex in Recife, the capital of the northeastern state of Pernambuco.

The target production capacity for the project is 300,000 units a year by 1995, according to Trade and Industry Minister Jose Hugo Castelo Branco.

The first company to build a plant in the Recife complex will be Gurgel, a Brazilian manufacturer of utility and specialty vehicles.

Sources in Brasilia, this country's capital, said the ministry is negotiating with two Japanese automakers who may also be interested in building in Recife.

Gurgel is currently developing a super-economy small car known as the Cena, which will go into production later this year.

The Cena, the brainchild of the company's owner and founder, Joao Conrado do Amaral Gurgel, is to be built in kit form, initially at the company's main Rio Claro plant in the interior of Sao Paulo state, and subsequently at a plant created especially for the Cena in Bahia, another northeastern state.

Thereafter, the Cena will be assembled at five sites around the country, including Recife.

The car will be sold initially to government fleets, which is expected to mean a loss of business for the country's established volume makers — Volkswagen, General Motors, Ford and Fiat.

Cena production is expected to be 60,000 units a year by the end of a three-year period, and 120,000 a year by 1992.

Europe sets new-car sales record

VW retains top spot; Japan's automakers score sharp gains

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The European new-car market grew by nearly one million units in 1986, setting an all-time sales record.

The Volkswagen Group led the sales race for the second straight year, while the Japanese registered sharp gains.

Sales in the 17 western European markets rose from 10,643,000 in 1985, the former record, to 11,625,000 in 1986, according to industry estimates complied by Automotive News.

West Germany's Volkswagen Group, which includes VW, Audi and Seat, finished with 14.7 percent of the market. The automaker's sales increased 11.4 percent to 1,703,500.

Fiat Auto achieved the largest single gain among European automakers, recording an 11.8 percent increase that helped it hold on to second place.

Among Europe's major manufacturers, only Britain's Austin Rover suffered a sales decline in 1986.

Renault, the industry sales leader just four years ago, ended in sixth place. Renault bottomed out with less than 10 percent of the market last summer but rebounded later in the year.

The big story of 1986 was the advance of the Japanese. They briefly attained 12 percent of the year-to-date market last fall but finished with 11.7 percent after curbing shipments to Europe late in the year.

Japanese makers combined for sales of 1,358,100 cars, a 19.1 percent jump over 1985 when sales increased 9.4 percent. Critics here charge the Japanese with targeting Europe in 1986 because of the yen's sharp appreciation against the U.S. dollar.

The growth has prompted calls for protectionist measures and an opening of the Japanese market. European companies now sell about 70,000 cars a year in Japan. The Japanese already face strict limits in France, Italy, Spain and the United Kingdom.

Among major European companies, only the VW Group, Fiat Auto and Mercedes-Benz increased

Korea's Dong-A seeks auto-making partner

By Andrew Tank
STAFF CORRESPONDENT

SEOUL, South Korea — Korea's Dong-A Motor Co. is hunting for a multinational partner to help it make export-quality cars beginning in 1989.

This development is part of a major expansion program at Dong-A, an ailing maker of utility vehicles and special-purpose trucks. It was rescued from financial difficulties late last year in a friendly takeover by Ssangyong Group, a large Korean construction and cement conglomerate.

Due to sensitivities about pending management changes, the three Dong-A executives contacted spoke on condition of anonymity.

They described a likely strategy that could make Dong-A a fourth major force in the Korean vehicle industry by the early 1990s, joining Korea's established vehicle makers — Hyundai Motor Co., Daewoo Motor Co. and Kia Motor Co.

The most intriguing move is the plan to find a technical collaborator for making sedans. Dong-A is prohibited from making sedans until 1989 under existing Korean government regulations, but Dong-A is already starting a search for a suitable partner from America, Japan or Europe.

Although Dong-A executives said planning is still in the very early stages, industry analysts in Korea note that Chrysler Corp. is the only one of Detroit's Big Three not to have a stake in Korea's fast-growing vehicle assembly business.

Chrysler signed a deal with the electronics giant Samsung to source auto parts in Korea. Many observers had predicted that it would be Samsung, which is itching for a crack at the vehicle business, that would rescue Dong-A.

However, the latest reports suggest that the Chrysler-Samsung parts deal is not progressing as smoothly as planned, so observers believe Chrysler may now be interested to do a direct deal with Dong-A.

Meanwhile, Kim Suk-Won, 41, now chairman of both Dong-A and the Ssangyong Business Group, is expected to make Dong-A the fast-growing flagship of his group. Its major activities are in slow-growing construction, cement, refining and paper industries. Kim aims to make vehicle making the largest contributor to his empire by the 1990s. In the first six months of 1986, Ssangyong Corp. (its trading arm) had sales of $525 million, its cement company $285 million and Dong-A just $44 million.

In 1986 Dong-A made 988 special-purpose trucks (such as cement mixers, fire engines and dump trucks), 2,745 trailers (including refrigerated versions, liquid petroleum gas tankers and military transporters), 180 express buses and 2,270 Korando utility vehicles. It exported $8.5 million worth of products, principally wheels and other parts for aftermarket use, and also a few vehicles — including 53 Korandos to Japan.

It has a technical collaboration with Nissan Diesel for making express buses and with Komatsu for making 32-ton dump trucks.

Already Ssangyong's Kim has indicated his readiness to invest heavily to back up his expansion plan. Dong-A plans to launch a four-wheel-drive station wagon this fall.

Dong-A is expected to build up production volumes, especially of station wagons and Korando utility vehicles. Current plans suggest that Dong-A will make around 10,000 station wagons next year and 15,000 to 20,000 in 1989. About 20 percent are expected to be exported to the Middle East and Southeast Asia.

In addition, Dong-A has been testing its express bus in the United States, but executives admit that it has failed to meet U.S. emissions regulations. Significant exports to North America are considered unlikely in the near future.

The rescue of Dong-A by Ssangyong could give it the financial resources to re-establish itself as a significant Korean vehicle maker.

The founder of Dong-A, Ha Dong-Hwan, started Korea's first vehicle company in January 1954, just after the Korean war had devastated most of Korea's industry. His company made the first Korean export of inter-city buses in 1967, the same year that Hyundai Motor Co. was formed, and was a crucial element in the initial stages of building Korea's vehicle industry.

But in the last few years Dong-A has been fighting an increasingly tough battle against its domestic rivals, each of which has strong multinational partners: Hyundai Motor is 15-percent owned by Mitsubishi, Daewoo Motor 50 percent by General Motors, and Kia 10 percent by Ford Motor Co. and 8 percent by Mazda.

In particular, Dong-A lost out in the government-sponsored carve-up of the domestic vehicle firms in the early 1980s. That gave Kia a monopoly of the small van market, and reserved car production for Hyundai and Daewoo. Dong-A was criticized at that stage for not merging with Kia, and subsequently found the major firms providing increasingly fierce competition.

Dong-A's last attempt to remain in the big league by taking over the ailing maker of Korando utility vehicles, Keohwa Co., was in December 1984. But this did not stop a progressive deterioration of its finances, which made it an attractive take-over proposition.

The actual takeover was a classic example of the abiding importance of close family and friendship ties in the organization of Korean business. Dong-A founder Ha visited Ssangyong chairman Kim, whose late father had had a very close friendship with him. Ha effectively offered to give Kim management control.

Press reports say that Kim paid Ha $35 million for his shareholding. That shut out other firms who were eager to buy Dong-A, notably Samsung, but also other Korean firms including Daerim and Hyosung. The powerful government bureaucracy does not seem to have been involved in the takeover, which is unusual, but no obstacles are expected to obstruct Kim's expansionary plans.

Certainly Kim is taking a close personal interest in his new acquisition. He visits the plant at least once a week, and recently appointed Choi Byung-Hang, the managing director of the planning and development office at the Ssangyong Business Group, to be president of Dong-A. Further management changes and the unveiling of a comprehensive reorganization and development plan are expected to be decided at a major meeting in February.

Import outlets, franchises up

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The number of import-make franchises and imported-car retail outlets continued to increase last year, according to the latest Automotive News imported-car dealership survey.

Continued proliferation of imported-car nameplates in the U.S. market and some internal marketing shifts at Chrysler Motors helped increase the number of imported-car franchises to a record total of 24,065, on Jan. 1, 1987, up 18.9 percent from 20,235 one year earlier.

Although Sterling, Acura and Hyundai franchises were added during 1986, the bulk of the increase came at the start of the 1987 model year when Chrysler Motors designated all Mitsubishi-built Conquest models as Chryslers, instead of Plymouths, in effect creating a new franchise, although the company's outlet count was unaffected.

The total number of dealerships selling imported cars in the United States reached 16,969 on Jan. 1, 1987, a 3.5 percent increase from 16,392 on Jan. 1, 1986.

The franchise total and the outlet total differ because of dualing — two or more franchises often are combined in a single outlet.

The latest figure was the largest number of imported-car retail outlets in the United States since Volkswagen and Renault were reclassified as domestic makes in the early 1980s.

The import-outlet record is 17,700 on Jan. 1, 1979 when VW and Renault dealerships were counted in the import totals.

Nissan remained the non-captive import leader, staying a handful of dealerships ahead of Toyota — 1,109 franchises to 1,087 — although neither total included the separate distributorships in Hawaii. Honda

Dodge chooses Dynasty tag for 1988 big car

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

The Dodge version of Chrysler Motors' new front-wheel-drive luxury sedan will be called Dynasty when it debuts as a 1988 model.

Dealer sources reported the name designation.

The new full-sized C-body sedan for the Dodge and Chrysler nameplates will be the first of a series of upscale, high-tech Chrysler Motors models in that class.

Chrysler Motors Chairman Gerald Greenwald has said a four-door sedan "will come out somewhat early in the 1988 model year" and launch the new car line (Automotive News, Nov. 3, 1986).

"We have a tentative plan in numbers of body styles that starts with the early 1988 model and goes out to a three-year plan," Greenwald said.

In addition to the C-body, Chrysler Motors has been looking at both Chrysler and Imperial Y-body models — upscale, stretched versions of the C-car that are due in 1989.

The new generation of luxury cars will be built at Chrysler's Belvidere, Ill., assembly plant. Omni-Horizon production at that plant is expected to end in early March.

Greenwald has said the C-bodies will take Chrysler into "the high-technology luxury-car business with both feet." He has said the models have "high-technology V-6 engines, terrific transmissions and all the electronics anyone could want."

Lincoln Vignale: seems to be heading into the real world — despite company claims to the contrary

NEW FORDS: *Future of Mustang stirs argument, but other programs move ahead*

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

Planning for the future of the rear-wheel-drive Mustang has turned into a full-blown donnybrook at Ford Motor Co.

The debate is raging between product and financial people on the company's product committee.

Product planners want to keep the venerable rwd Mustang rolling for many years. But that would require considerable investment for — among other things — a new suspension and new passive-restraint system.

Those on the financial side don't want to spend the money. They would rather see the rwd Mustang eased into a peaceful death — no later than the end of the 1989 model year.

As things stand, the rwd Mustang will remain in the Ford stable through that season. Its fate beyond is in question.

Meanwhile, a 1988 front-wheel-drive Mustang IV will be introduced next fall, produced by Mazda Motor Manufacturing U.S.A. at its new plant in Flat Rock, Mich.

The pending arrival of the two-door Mustang IV, based on the fwd Mazda 626, is adding fuel to the Dearborn controversy.

Product planners argue that the old Mustang should be retained as well because, although the current base rwd Mustang is nine years old, it was the best-selling small-sporty car in the United States in calendar 1986 with 167,699 sales.

Moreover, the Mustang's 6 percent gain last year went against the industry tide, which saw the small-sporty segment decline 8 percent.

Planners contend it would be unwise to send the popular, macho rwd Mustang to the grave, surrendering the compact sporty-car segment to General Motors' Camaro/Firebird, while replacing it with what rwd Mustang advocates call "a fwd Japanese sewing machine."

The product planners would prefer to update the rwd Mustang and keep it going through the 1994 model year, while augmenting it with the fwd Mazda version.

Because of General Motors' cancellation of its GM80 program — which was to have provided fwd successors to the present Firebird/Camaro — those GM rwd models will continue into the early 1990s.

As things stand, two Mustangs could show up in Ford dealer showrooms in the 1988 model season — one from Ford and one from Mazda — unless the Mazda-made Mustang IV gets a different name. Some Ford insiders are concerned that two different Mustangs in the same showroom might bewilder customers and affect both models adversely.

Meantime, Ford's product pot continues to boil.

Production prototypes of the 1988 fwd Continental are now being built in Dearborn.

Production of the Taurus-based Continental, code-named FN9, will begin in a few months at Ford Motor Co.'s assembly plant in Wixom, Mich.

'88 fwd Continental

AUTOMOTIVE NEWS JOE WILSSENS

Another car, codenamed the FN36, will become the 1990 Lincoln Town Car. A large rwd model with an all-new platform, it looks like an aerodynamic limousine.

A car codenamed MN12 will become the midsize 1989 Thunderbird and Cougar. It is similar to the Taurus/Sable in basic design, but sportier.

The super-aerodynamic MN12 will have a supercharged 3.8-liter V-6 engine with sequential-port fuel injection.

FN10 is the codename for the 1991 Lincoln Mark.

That program has not yet been approved. But the car is based on the MN12, which means it will be rwd. A few prototypes have been built and are being kept under extremely tight wraps.

The Lincoln Vignale, a two-passenger convertible concept car, unveiled last fall in Paris and in North America at the Detroit Auto Show this month, seems to be heading into the real world — despite company claims to the contrary.

Designed by Ford's North American design center and fabricated by Ford's Italian facility, Ghia S.p.A. in Turin, Italy, the Vignale is the company's version of a high-performance luxury touring car of the 1990s.

In show dress, the Vignale has a hardtop roof with unusually high glass area, as well as a fabric roof that can be used either up or down.

The Vignale was created to include all-wheel drive, four-wheel anti-lock disc brakes, four-wheel independent suspension and a load-leveling air suspension with automatic soft/firm ride control.

It is designed to be powered by a front-mounted V-8 capable of accelerating the car from zero to 60 mph in less than eight seconds.

Functional prototypes of the Vignale are now being built. The car's first and foremost requirement is a stiff, performance chassis.

The Vignale would compete in the personal luxury-car segment against Cadillac Allante and Chrysler TC Turbo by Maserati.

Finally, a task force in Ford product development has been assigned to work on the next-generation Taurus/Sable, a no-date program but with a likely target around 1992.

Notchback, wagon due for Merkur

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

PALMA, Mallorca — Lincoln-Mercury's Merkur line in the United States will get notchback and wagon versions of the German-built Ford Sierra beginning in 1988, company insiders say.

In addition, sources said the Merkur Scorpio, which is set to debut in the United States in mid-May, will be offered in two price packages as a concession to the dollar's rapid fade against the German mark.

Ford Motor Co. has ruled out offering Scorpio with the highly touted Mustang GT 5-liter V-8 engine as an option, though sources say a prototype was built.

Ford of Germany officials gathered here to preview revisions to the European Sierra — one version of which is the Merkur XR4Ti launched in the United States nearly two years ago.

A notchback model is joining the Sierra line in Europe simultaneous with the updating of the five-year-old design. Insiders said the new Sierra sedan and the existing wagon will be added to the Merkur lineup in the United States, probably in mid-1988.

The U.S. prestige market in which Merkur competes has generally favored sedan designs. At the same time, station wagons — as demonstrated by the success of Volvo and lately the Mercury Sable wagon — are growing in popularity in segments dominated by young, affluent buyers.

Ford officials in Dearborn originally hoped to market the Scorpio at one price with no options, but a Ford source last week said "that price would have been too high."

Plans now call for two levels — a base version and a fully equipped model costing about $3,000 more. Scorpio is expected to be positioned in the $25,000-$30,000 region, but the fading dollar means a final pricing decision will be delayed as long as possible.

The car will be powered by Ford of Europe's revised V-6 engine (now 2.9 liters) introduced on the Scorpio in Europe last fall.

Lincoln-Mercury has said the delay in introducing the car was due chiefly to engineering changes as executives sought an improved performance package.

There was speculation that L-M had eyed the Mustang V-8 as an engine alternative. Sources here confirm that a prototype was built, but proved, among other things, to be nose-heavy and generally unwieldy.

TRUCK INDUSTRY

'86 is best ever with 4.8 million

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

New-truck sales in the United States rose to a record 4,870,839 in calendar 1986, up 4.0 percent from the previous peak of 4,681,698 in 1985.

It was the sixth straight year of truck sales increases.

Executives anticipate a small decline in the light-truck segment this year.

They also look for modest increases in the medium- and heavy-truck segments, with the shift of Class 8 buyers into Class 7 expected to continue.

Peter E. Rupp, president and chief executive officer of Freightliner Corp., anticipates Class 8 sales of 120,000 in calendar 1987, up from 112,871 last year.

His prediction is based on the need to replace aging truck fleets and economic and regulatory factors affecting the industry.

Freightliner edged Mack for the No. 2 spot in Class 8 sales behind Navistar. However, Freightliner's sales, like those of others in Class 8, were off for the year.

Rupp said his company has a strong order board and has increased production during the past four months. He said Freightliner foresees no plant closures or layoffs.

Ford has also seen an increase in its medium- and heavy-truck orders and has been considering overtime at its Louisville, Ky., plant.

David D. Litchfield, manager of Ford's heavy-truck advertising and merchandising department, said he looks for Class 8 to account for a strong 40-45 percent of the medium/heavy market for the foreseeable future.

Class 8 sales of 112,871 in 1986 were off 15.5 percent from the 1985 total, according to the Motor Vehicle Manufacturers Association.

Class 6 sales of 44,796 were down 7.4 percent from the previous year.

Classes 5 and 7, nudged by the Japanese, were up last year.

Class 5 sales of 5,905 were up 16.2 percent from the previous year. Class 7 sales of 100,713 were up 3.9 percent. No Class 4 sales were reported.

Sales of light-duty trucks — Classes 1-3 — reached 4,606,554 last year, up 4.7 percent from the previous year's 4,397,705.

New Navistar drivetrain

SDT system is for construction trucks

CHICAGO — Navistar International Corp. is offering a new simplified heavy-duty drivetrain system for its International S-Series and Paystar trucks used in the construction business and other severe-service applications.

Called SDT (for Simplified Drive Train), the system features a new Cummins L10 high-torque-rise diesel engine that has been matched with a new wide-split Spicer 9505-2A heavy-duty direct drive 5.2 transmission.

The engine is available in 250- and 285-horsepower versions and has a 1,300-2,200-rpm operating range, 100 more rpm than a conventional L10 engine.

The L10 engine produces nearly constant horsepower throughout the entire operating range, allowing effective matchup with a wide-split transmission.

The transmission has torque capacity of 950 pounds-feet. It was developed specifically for severe-service applications by Navistar, Cummins and Spicer engineers, said Robert M. Shaughnessy, Navistar senior vice president, marketing and sales.

Shaughnessy said company tests found trucks with the SDT system to be up to 12 percent more fuel efficient and up to 310 pounds lighter than similarly equipped competitive construction trucks.

The wide operating range of the L10 engine also allows it to be matched with a higher rear-axle ratio, while maintaining the same road speed as an engine rated at 2,100 rpm.

The SDT system is available exclusively on International 2500 and 2600 heavy S-Series models, as well as Paystar and Paystar Weight Watcher on/off-highway conventional construction and severe-service truck models.

For normal situations, the SDT Spicer 9505-A2 transmission is a simple shifting five-speed with direct drive.

For ease of operation, it has only one shift lever.

For off-highway applications, the transmission has two additional forward gears: a 13.9 forward gear for most off-road situations and a 24.36 low-low forward gear for applications such as unloading asphalt where fine speed control is needed.

There are also two reverse gears: a normal reverse of 8.53 and a deep reverse of 24.36 for controlled speed in backing situations.

Rockwell merges divisions making brakes and axles

TROY, Mich. — Responding to a changing global marketplace, Rockwell International Corp.'s Automotive Operations has formed an On-Highway Products Organization.

Ronald L. Roudebush was appointed president.

The restructuring consolidates product planning and development, manufacturing, research and engineering, sales, marketing and finance functions of the former Brake and Trailer Axle and On-Highway Axle divisions.

Don DeFosset is executive vice president of the On-Highway Products Organization. He is responsible for all its activities outside North America and will direct the operations of manufacturing locations around the world.

Roger T. Morgan is vice president, manufacturing, for the group. He will report to DeFosset and be responsible for all operations of the organization's domestic manufacturing facilities.

David C. Blumenstein is vice president and controller, finance. He will direct the new organization's financial activities.

Halden L. Booth is sales vice president. He is in charge of all original-equipment manufacturer and government sales activities, as well as field operations.

Roudebush

DeFosset

Leonard C. Buckman is vice president, brake products. In that newly established position, he will focus on the planning and development of brake systems, including technical support and functional coordination globally.

Gerald DeClaire is vice president, research and engineering. He is responsible for the design, development, testing and applied research for the On-Highway Products Organization.

Harold E. Krivan is vice president, marketing, business development and service parts. He is in charge of managing and expanding the service parts business and also manages marketing programs, training and communications.

In addition to being president of On-Highway Products, Roudebush will also be acting vice president — axle products. In that newly established position, he will be responsible for axle systems, product planning, technical support and functional coordination on a worldwide basis.

SERVICE MANAGEMENT

Service stressed by new imports

Hyundai, Suzuki, Range Rover discuss their requirements

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

America is the land of opportunity for importers of automobiles. In the last 18 months, six nameplates have entered the U.S. market. They are Acura, Hyundai, Range Rover, Sterling, Suzuki and Yugo.

Whether those ventures succeed depends not only on the products offered, but the service with which the importers back them.

Representatives from three of those ventures, Suzuki, Range Rover and Hyundai, discussed the issues involved in establishing a service network.

The importers must train their dealers to repair the new products, and they must provide specialized tools and a parts network that can provide replacement components quickly. They must see to it that their dealers have the proper facilities.

Also, the vehicles must prove to be reliable, given the U.S. driving environment and the habits of the American driver.

William A. Charles, director of service operations for Suzuki of America Automotive Corp., has been on the ground floor in the establishment of three service networks.

In 1972, Charles helped set up the service operation of Mazda's then-new Midwest dealer network.

He worked to establish the DeLorean service and parts network in 1979.

Establishing a service network for Suzuki, which sells the four-wheel-drive Samurai, has been the smoothest of the three operations, he said. The company started with 50 Western and Southeastern dealers last fall and now has 112 dealers in the Western and Eastern U.S.

Charles said, "We have had a wonderful start-up. We have high customer satisfaction based on surveys, and we have had low warranty claims and costs."

He attributed the success of the Suzuki service start-up to the quality of the product and the skill of the dealers and service personnel.

Mazda, he said, had a rocky service start. "Mazda had a good product for its day, but the rotary engine burned oil in the normal course of operation," he said. "That was about the time self-service gas stations came into being. Consumers weren't used to checking oil levels regularly, and low oil levels led to maintenance problems."

In the case of the DeLorean, Charles said, "The car hit the market too fast. The start of the service and parts operation was a success, but the car suffered from component failure and wasn't manufactured for a long enough period to smooth out the glitches."

He called the Suzuki Samurai, which has been manufactured in some form for 16 years, a "simple workhorse."

"Part of our joy is that it doesn't fail," Charles said.

The Samurai has a carbureted, four-cylinder, four-cycle aluminum engine — a basic powerplant to experienced mechanics. However, Charles said, the 4wd system may be new to some technicians.

Mechanics participate in a two-day, bumper-to-bumper familiarization course as well as Power Drive School to learn drivetrain repair. Suzuki has training schools in Orange County, Calif.; and Atlanta. Plans also call for a training school in metropolitan New York.

Charles said mechanics need mostly standard garage tools to repair the Samurai. The company sells its dealers a special tool package for about $500.

Dealers also must buy a start-up parts package that costs about $5,000. Charles said dealers usually order more parts than those in the basic package.

He claimed Suzuki has a 97 percent fill rate on dealer-ordered parts — that is they can ship those parts from U.S. stocks immediately.

He also said the Samurai lends itself to accessories and dealers do well in that area.

The Range Rover is a considerably more exclusive and complex 4wd vehicle than the Samurai. Scheduled for a March introduction in the United States, it will be sold initially at 36 dealerships in Western and East Coast states. Plans call for the network to be expanded during the year to 65 dealerships in major urban markets across the country.

David A. Schworm, general manager — service for Range Rover of North America, said, "The disadvantage of establishing a new organization is that you have to start from scratch. The advantage is that you have the ability to select the best new people."

Range Rover's dealers each send one mechanic to the factory in Great Britain for training.

Schworm said factory training "establishes solid competence in the product. It also gives the mechanic a memorable experience and an allegiance with the product.

He added, "Porsche and Mercedes mechanics in the United States often own an older model that they maintain. Range Rover mechanics don't have that opportunity yet" because the product is new to the U.S. market.

The factory program includes repair procedures, training in off-road driving and a plant tour.

Range Rover also has a training facility in Lanham, Md., where its U.S. operations are based.

That facility will be used by dealer mechanics as well as company field personnel.

To ensure that parts are readily available, Range Rover has contracted with Caterpillar Tractor Co. to distribute parts. Caterpillar has a tremendous reputation in the diesel-engine and earthmover business for supplying spare parts.

The parts will be distributed from Memphis, Tenn., the hub of Federal Express, so overnight shipments are possible.

Range Rover has special maintenance and repair requirements and some specialized tools are needed.

For example, Schworm said, basic Range Rover maintenance requirements exceed those of the the average small sedan — a lube job requires 21 quarts of fluid.

The vehicle also requires special handling in the service bay.

Range Rover dealers are dualed with other high-line makes, and the importer does not require the dealer to build a separate service facility. Dealers, however, must have a work stall and hoist dedicated to Range Rover.

The required hoist is manufactured by a company in Denmark and is suited to the special needs of the vehicle, Schworm said. It must also be painted in the green, yellow and black Range Rover theme.

Dealers also must purchase a special tool kit that includes advanced diagnostic equipment. The kit costs about $3,000.

Hyundai dealers are not dualed with other makes and the company has more control over its dealer facilities. Dealers sell the Hyundai Excel in three-door, four-door and five-door versions.

Suzuki technicians work on a Samurai

The floor of the service area must be light gray and walls must be gray and white and ringed by a blue stripe, said Eric W. Bondus, national manager of service training and warranty for Hyundai Motor America.

Bondus said, "We laugh about it being a McDonald's approach. In consistency, there is the benefit of acceptance. The customer knows where everything is and is familiar with the surroundings."

Because dealers have used-car business, repair stalls can accommodate cars ranging in size from "a Fiat 850 to a Ford one-ton pickup," Bondus said.

He also noted that the company plans to be a full-line importer by 1990, offering cars in other sizes than the Excel.

Hyundai offers garage equipment to its dealers at a national buying price and offers a tool package that includes electronic diagnostic equipment.

In its first year of operation, Hyundai has a parts fill rate of 95 percent, Bondus said. He claimed that is comparable to the top Japanese makes.

Hyundai started with 65 dealers and now has 162 in 30 Western, Eastern and Southern states. The company plans to expand to the Midwest and Northwest, and Bondus predicted it will have 260 dealers in 48 states within 1½ years.

To service customers in the Central United States before dealers are appointed, Hyundai has set up a Customer Assistance Program — a network of 100 independent service outlets that have access to technical assistance, training materials and overnight parts shipment. Bondus said those outlets will remain in operation after dealers in the Central states are appointed.

"There is still a lot of room between dealers," he said.

Bondus said Hyundai looked for experienced dealers who were aware of the importance of the backshop and used-car sales.

He said, "For some dealers, all units — sales, parts and service, and used cars — are profit centers. Other dealers concentrate on new-car sales and regard the other departments as a necessary evil. We looked for balanced dealers."

He added, "Our dealers own five to six dealerships on the average and have been in the business for 17 years on the average."

Bondus claimed the Hyundai has proven exceptionally reliable.

"One dealer told me he feels like the Maytag repairman," he said.

To generate additional business in the backshop, dealers distribute spare parts and body sheet metal to the aftermarket. Dealers also retail parts and accessories that customers might find in the auto section of department stores.

Hyundai has training facilities in New Jersey; Atlanta; and Orange County, Calif. Technicians receive three days of intensive training on engine, transmission, brakes, suspension, steering and other major systems.

The top technician in the dealership is the first to attend the company training session, followed by the number two technician. At the dealership, training videos and workbooks are distributed and additional technicians may attend the schools at no charge.

Also, the service manager is required to attend a one-day course.

Asked if he would change anything in starting a new service network if he had to do it over, Bondus replied, "Picking the best people takes a long time. We were understaffed at the start. But its better to be understaffed than not to have the best."

Shop volume slips in November, first dip since February

SERVICE INDEX
97.7★

	Nov., '86 vs. Nov., '85	11 mos., '86 vs. 11 mos., '85
Gross Profit on All Labor and P&A Sales	+0.4%	+6.9%
Repair Orders Written	−7.9%	−0.3%
Total Labor Sales (Customer & Warranty)	+0.7%	+8.4%
Shop Parts Sales (Customer & Warranty)	− 3.3%	+6.3%
Sales of All P&A	− 1.2%	+3.6%

★—Survey by Automotive News shows that dealers' service and parts business in November 1986, was 97.7 percent of business in November 1985. Service business in the first 11 months of 1986 was 105.0 percent of business in the corresponding period in 1985.

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships declined in November, the first drop in the Automotive News Service Index since February 1986.

Service volume for the first 11 months of 1986, however, continued to outpace volume during the corresponding 1985 period.

The Service Index shows that shop business at dealerships in November amounted to 97.7 percent of the volume in November 1985.

In the first 11 months of 1986, service volume was 105.0 percent of that in the 1985 period.

Dealers and service managers said slow new-car sales, fair weather in some areas and fewer working days than in the previous November stalled service business for the month.

A Northeast Chevrolet dealer said service business slipped because of lagging new-vehicle sales and "a loss of productivity due to mechanics attending schools."

A Northwest Dodge-BMW dealer said, "Service declined as warm weather continued through November. Cold weather brings in service customers."

On the other side of the coin, a Midwest Buick-Pontiac dealer said "Business increased by 11 percent. Colder weather required customers to bring cars in for winter get-ready service earlier than normal."

A Southern Chevrolet dealer said there were only 19 working days at his firm in November 1986, compared with 23 a year earlier.

An Eastern Oldsmobile-Saab-Volvo dealer said, "Repair orders as a measurement of volume in November 1986 were 86 percent of the November 1985 total. If there had been 20 service days in November 1986, as there were in November 1985, volume would have been 90 percent of a year ago. The difference of one day can have a significant impact."

In November, total labor sales (customer-paid and warranty) showed a gain of 0.7 percent. Gross profit on all labor, parts and accessories sales was up 0.4 percent.

Sales of all parts and accessories were down 1.2 percent; shop parts sales (customer-paid and warranty) were down 3.3 percent; and repair orders written were down 7.9 percent.

Parts and accessories sales to off-premises customers were up 0.4 percent in November.

Total labor sales registered the biggest gain in the first 11 months of 1986, climbing 8.4 percent.

Gross profit on all labor, parts and accessories sales rose 6.9 percent through November; shop parts sales increased 6.3 percent; and sales of all parts and accessories climbed 3.6 percent.

Repair orders written through November fell 0.3 percent.

Parts and accessories sales to off-premises customers were up 0.7 percent through November 1986.

DEALERS VIEWPOINT

"Mark Bee, my partner, and I are thoroughly satisfied with the remarkable profit and sales that the Phase II Anti-Theft device has generated for us.

We are pre-installing your 'A' System on all our inventory. We are meeting no customer sales resistance and find your product a valuable aid in helping us to make the new car deal.

Your product's expandability makes it a big profit must for this dealership.

Thanks again for a great product and keep more coming!"

FTC probes demos sold as new

By John Baer
SPECIAL CORRESPONDENT

HARRISBURG, Pa. — The Pennsylvania Automotive Association is warning members that Federal Trade Commission "mystery shoppers" are active in Pennsylvania and adjoining states. The shoppers allegedly are seeking to determine if demonstrators are being sold as new cars in violation of FTC rules.

The association said the FTC is investigating dealers in Maryland and Virginia for violations of the FTC Used Car Rule.

"Under federal law," the PAA said, "a new car, including a demonstrator, must have posted on the window the new Monroney label until the first retail sale."

The Monroney label is the federal price sticker.

"In addition, if the car is a demonstrator, it is defined as a used car for purposes of the FTC Used Car Rule," the PAA said. "Before a dealer offers a demonstrator for sale to a customer, it is imperative that the FTC Used Car label be on the car."

Technically, according to the Pennsylvania dealer association, dealers face a $10,000 fine for not having the label on the car prior to offering it for sale.

"One of the techniques used by the 'mystery shoppers,' " the association said, "is to observe salesmen using demonstrators, and to ask a salesman as he exits whether the car is for sale. If the salesman answers 'yes' without placing an FTC sticker on the car first, this is a technical violation, and the dealer can be cited."

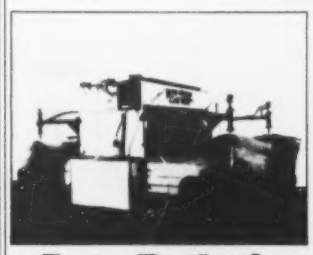
BROADWAY EQUIPMENT COMPANY
introduces the

AUTO BUTLER®
GENTLE CAR CARE CENTER

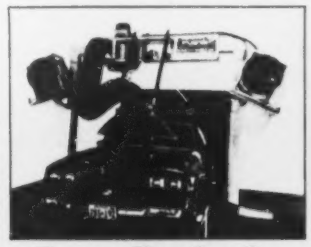
and offers
The Auto Butler Warranty / Follow-Up Plan

- ★ *Rust Proofing with 10 year Insured Warranty*
- ★ *Paint Sealant with 5 year Warranty*
- ★ *Polishing*
- ★ *Fabrgard*
- ★ *Vinyl, Leather Protection*



Auto Butler®
All Cloth Car Wash

- 2-3 Minute Wash Cycle
- Absolutely No Scratches
- Fully Automatic Operation
- Economical To Operate
- Designed To Minimize Wasting Water



Auto Butler®
Blower/Dryer

- Energy Efficient
- Virtually Eliminates Water Spotting
- Galvanized Construction
- Durable, Lasting, Simple Operation
- 3-10 HP Blowers

Auto Butler®
Buff n' Shine Machine

- Most Profitable Sq. Footage In The Dealership
- 10-12 Minute Sealant or Polish Application With 1 Technician
- Smooth, Safe, Hydralic Operation
- Eliminates Most Prep Labor Problems
- Proven By New Car Dealers Nationwide

Broadway Equipment Company has produced a 15 minute film that tells the "Auto Butler Service Builder Story" Simply fill out the coupon and send it to:

Auto Butler, Inc.
1110 W. Broadway
Minneapolis, MN. 55411

Auto Butler will send you the film to view at your leisure in the privacy of your own home or office. (All you need is a Beta or VHS video player) See if you don't agree that this is one great way to increase your CSI.

Phone

DEALERS

FROM PAGE 3

remained in third place.

Another important trend that continued last year was the shift to exclusive, one-make import dealerships. On Jan. 1, 20.6 percent of the outlets were exclusives, compared with 18.1 percent a year earlier. Mitsubishi, Hyundai and Acura, all new and growing dealer groups, are comprised entirely of exclusives. And, many importers who are trimming points are cutting duals while adding exclusives.

Honda, with 687, had the highest number of single-line dealers. Toyota remained in second place with 660, followed by Nissan with 593.

The on-paper addition of separate Chrysler Conquest franchises did a number of things statistically to the franchise count.

For one thing, it gave the domestic makers some 61.5 percent of the total number of import franchises through their captive makes. However, the captives account for considerably less than that percentage of either retail outlets or imported-car retail sales.

In fact, Merkur franchise trimming by Lincoln-Mercury and overall point trimming at Chevrolet actually reduced the number of dealerships selling the captive makes. However, there was an increase in the number of dealerships selling two or more independent imported makes or a combination of domestic and non-captive imported makes.

Another result of the Chrysler Conquest change was to give Japanese makes an an even-larger percentage percentage of all import franchises — 80.3 percent on Jan. 1, compared with 78.9 percent a year earlier.

West German-make franchises declined slightly during the year, but remained the second-largest block. West German makes accounted for 9.7 percent of the franchises on Jan. 1, compared with 11.7 percent one year earlier.

Sweden remained in third place, with 3.2 percent of the franchises, compared with 3.7 percent on Jan. 1, 1986.

British makes, spurred by the addition of Sterling and growth by three other makes, moved into fourth place with 2.1 percent of the franchises, compared with 1.6 percent at the same time last year.

The Italian share remained at 1.8 percent, while the French share dropped to 1.1 percent from 1.4 percent.

Yugoslavia accounted for nearly 1.1 percent, compared with 0.8 percent last year, while South Korea established a U.S. market beachhead with two-thirds of one percent.

Sales jump 18% in Germany

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Europe's record 11.6 million new-car sales volume in 1986 was accomplished on the back of the booming West German industry.

While new-car sales elsewhere in western Europe improved 6.6 percent, the German market, Europe's largest and the third biggest in the world, grew 18.2 percent, according to industry estimates compiled by Automotive News.

New-car sales here reached an all-time record 2,813,000, up from 2,379,000 in 1985. Only the Spanish market, which expanded nearly 20 percent, grew faster.

Most industry analysts expect West German sales to fall slightly this year, perhaps to approximately 2.65 million.

The partial phase-out of tax incentives on cars equipped with catalytic converters that took effect this month helped boost December's sales by 53.5 percent. Most observers expect the same sales pace through 1987 as last year, but without the year-end upsurge.

In an interview with Automotive News, Daniel Goeudevert, Ford of Germany managing director, predicted that a further reduction in the tax incentive, which is scheduled for January 1988, will have a less dramatic affect on year-end sales

"The tremendous increase in December registrations will not be repeated next year," said Goeudevert. "But if we achieve 2.6 million it would be a great year."

Japanese automakers were the biggest beneficiaries of the expanding and unrestricted West German market, increasing their combined share from 13.1 percent to 14.8 percent. Japanese sales are restricted in France, Italy, Spain and the United Kingdom.

Toyota sales here rose nearly 50 percent, from 61,200 in 1985 to 91,300. Toyota's enormous gain in West Germany enabled it almost to match rival Nissan in overall European volume. Nissan finished with 3 percent of the market across Europe, up from 2.9, while Toyota notched 2.9 percent, compared with 2.6 percent in 1985.

More than 25 percent of Toyota's total sales in Europe were achieved in Germany. Its market share, the largest of any Japanese maker here, climbed from 2.6 percent to 3.2 percent, surpassing Renault. The French company's sales, bolstered by the falling franc against the German mark, grew 18.2 percent in West Germany.

West Germany's leading import was Peugeot S.A., according to industry sources, with sales of 131,500, a 34.3 percent increase. Fiat sales in West Germany rose 20.1 percent to 125,300.

Volkswagen Group maintained its leading market share at just under 29 percent. VW's Golf/Jetta represented nearly 15 percent of all new-car sales in West Germany.

Second-place Opel gave up some ground to the Japanese, slipping from 15.6 percent share to 15.1 percent, while increasing sales volume 14.2 percent.

Mercedes-Benz and BMW each lost share in their home market last year as lower-priced segments expanded. Mercedes held on to third place overall with a 10.7 percent sales gain and 10.8 percent of the market, down from an 11.5 percent share in 1985.

Specialist BMW fell from 6.7 percent of the market in 1984 to 6.1 percent in 1985 and dropped still farther to 5.2 percent last year. Volume at BMW was up only 2 percent in a total market that increased 18.2 percent.

However, the company improved its West German performance in recent months. Through the first three-quarters of 1986, BMW sales were down 2.8 percent from 1985.

The growth in West Germany followed two years of stagnation, while Spain overcame a decade-long sales slump in 1986. Spain, Europe's fastest-growing new-car market, went from 575,000 to 689,000 — eclipsing the previous record of 633,000 in 1977.

The Spanish market turned red-hot at midyear and continued to rise till year end.

EUROPE

FROM PAGE 2

market share last year. Peugeot S.A., Renault, General Motors, Ford, BMW, Volvo and Austin Rover lost share in the record market, while Japanese leaders Nissan, Toyota, Mazda and Mitsubishi registered gains.

Nissan sales increased 13.8 percent to 348,900 cars, giving the company 3 percent of the European total. Rival Toyota jumped 22.4 percent to 336,200 and ended the year with 2.9 percent of the market.

Mazda climbed 16.8 percent to 237,700 and Mitsubishi 21.3 percent to 141,100.

Volkswagen Group rode the crest of the vibrant West German market, which grew by 18 percent to 2.81 million units in 1986. The Wolfsburg group maintained 28 percent of that country's market.

Volkswagen would have held the European sales lead last year even without acquiring a majority interest in Spanish automaker Seat. The VW marque alone represented 10.7 percent of European sales, up from 10.5 percent in 1985.

VW's Golf/Jetta accounted for 6.8 percent of Europe's new-car volume with 795,604 units.

Audi's share in Europe dropped from 2.5 to 2.3 percent, while sales increased 4.1 percent. But VW's prestige unit has been on the rampage since introducing the new Audi 80 (4000) last fall.

Seat sales were up 23.3 percent to 191,700, giving VW an additional 1.6 percent of the European market.

Fiat Auto boosted its share of the European market from 12.3 percent to 12.5 percent. Sales jumped 11.8 percent to 1,458,300 — the biggest surge of any European company.

Its share of the Italian market rose from 52.3 percent to 54.4 percent. With the acquisition of Alfa Romeo last fall, it now controls better than 60 percent of the market that reached 1.82 million units in 1986.

NEW-CAR SALES IN EUROPE

Country	12 mos., 1986	12 mos., 1985	Pct. change, 1986 vs. 1985
West Germany	2,813,300	2,379,300	+ 18.2
France	1,892,500	1,766,300	+ 7.1
United Kingdom	1,882,500	1,832,400	+ 2.7
Italy	1,823,900	1,744,400	+ 4.6
Spain	689,100	575,100	+ 19.8
Netherlands	563,000	495,500	+ 13.6
Belgium/Lux	428,300	389,600	+ 9.9
Switzerland	306,800	271,900	+ 12.8
Sweden	268,800	263,000	+ 2.2
Austria	254,800	242,700	+ 5.0
Denmark	168,100	156,600	+ 7.3
Norway	167,300	159,100	+ 5.2
Finland	142,700	137,400	+ 3.8
Portugal	106,000	91,700	+ 15.6
Greece	61,200	78,500	– 22.1
Ireland	56,800	59,500	– 4.7
TOTAL	11,625,100	10,643,000	+ 9.2

Alfa Romeo gives Fiat another 1.5 percent of the total European market and puts the Turin giant in a position to challenge VW for the sales lead this year.

Ford held on to third place with sales of 1,361,500, which was strong enough for 11.7 percent of Europe's market. Ford sales were up 7.4 percent but market share fell from 11.9 percent.

Peugeot S.A. finished fourth with 11.3 percent on sales of 1,315,600, a 7.3 percent increase over 1985. GM followed with 11.1 percent on sales of 1,287,100, a 6.2 percent increase.

Renault's share fell from 10.7 percent in 1985 to 10.6 percent. But the French government-owned automaker has been reclaiming market share since its slice of the European market dropped to 9.9 percent at midyear.

Renault sales for the year were 1,234,400, an 8.4 percent increase sparked by introduction of the R-21 sedan last spring and aggressed from 394,000 to 436,600.

Well over half of Mercedes' European sales increase of 42,600 was achieved in West Germany, where the luxury-car maker boosted sales by 10.7 percent.

BMW lost European share despite the strong home market. The Munich specialist saw its West German market share drop from 6.1 percent to 5.2 percent on an overall sales gain of 2 percent. Its European market share fell from 2.7 percent to 2.6 percent.

Volvo declined 9.6 percent in the Swedish market, losing ground to Saab. But European sales were up 5.1 percent as it registered gains in West Germany and the United Kingdom. Market share in Europe was off slightly, declining from 2.4 percent to 2.3 percent.

OBITUARIES

Arthur Stanton, 69, pioneer VW distributor

NEW YORK — Arthur Stanton, 69, chairman of World-Wide Volkswagen Corp., the first VW distributorship in the United States, died Jan. 20 while attending a dealer meeting in Hawaii.

Mr. Stanton founded World-Wide Volkswagen, the distributorship for New York, New Jersey and Connecticut, in 1954. He once remarked that the distributorship was established with a handshake.

Mr. Stanton was considered by many to be the founding father of VW in the United States. He imported the first Beetle into the country in 1949 and, according to Noel Phillips, president of Volkswagen of America, helped establish a legend.

From the small beginnings in 1954, he saw the distributorship grow to serve 100 dealers selling 46,000 cars in this area.

Bernard E. Platt

ROYAL OAK, Mich. — Bernard E. Platt, 68, retired Mack Trucks Inc. executive, died Jan. 19. He retired in 1983 as regional vice president of Mack Trucks in Detroit.

Frederick W. Hertrich Jr.

SEAFORD, Del. — Frederick W. Hertrich Jr., 72, founder and president of Hertrich Pontiac-Buick here, died Dec. 31. Mr. Hertrich was a former president of the Delaware Automobile Dealers Association.

Walter D. Appel

PONTIAC, Mich — Walter D. Appel, 95, retired automotive engineer, died Jan. 18. Mr. Appel was a former engineering executive at General Motors, Ford Motor Co. and Willys-Overland.

Canadian sales slated for Yugo this year

BELGRADE, Yugoslavia — Crvena Zastava, the Yugoslavian producer of the Yugo subcompact, will export 3,000 Yugo GV models to Canada beginning later this year, according to Tanjug, the official government news agency.

The contract for cars and spare parts is valued at $10 million by Tanjug, which said sales will start in the second half of 1987.

The news agency did not name the partners in the import program nor announce a pricing policy.

Car output edges up

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers scheduled production of 165,586 cars last week, 1.40 percent more than the previous week's 163,295 but 6.73 percent below the year-ago week's 177,528.

So far this year, 469,448 cars have been assembled, 19.48 percent below the 583,001 completed last year at this point.

Companies split last week's targeted production as follows: General Motors, 50.29 percent; Ford Motor Co., 25.63 percent; Chrysler Motors, 13.23 percent; Honda of America Manufacturing Inc., 4.42 percent; New United Motor Manufacturing Inc., 2.54 percent; Nissan Motor Manufacturing Co., U.S.A., 1.77 percent; Volkswagen of America, 1.21 percent; and American Motors, 0.91 percent.

GM has increased its number of indefinite layoffs by 3,000, to 27,000. The layoffs were a result of scheduled adjustments at various GM assembly and components plants.

GM's Leed's, Mo., plant will be idle this week (Jan. 26) until Feb. 2 because of a parts shortage.

GM's Lordstown, Ohio, plant resumed output today (Jan. 26). The plant was down last week for inventory adjustment.

GM's Arlington, Texas, plant remains down for installation of painting equipment. The plant is expected to resume production Feb. 16.

GM's Lakewood, Ga., facility will be idle until early May for model changeover.

Ford's Dearborn, Mich., and Chicago plants were slated for Saturday (Jan. 24) overtime.

Daily overtime is scheduled at all Ford car plants this week. Saturday (Jan. 31) overtime is slated at Ford's Lorain, Ohio, plant.

Chrysler scheduled daily overtime this week at its Belvidere, Ill.; Newark, Del.; and Sterling Heights, Mich., plants.

Truck production declines 2%

Last week's scheduled domestic truck production totaled 76,810 units, 2.16 percent below the previous week's 78,502 but 8.39 percent more than the year-ago week's 70,865.

Year-to-date, 229,654 trucks have been assembled, 3.62 percent below the 238,275 built last year at this point.

General Motors' Baltimore plant was scheduled for overtime Saturday (Jan. 24).

Ford Motor Co., slated Saturday overtime at its Wayne, Mich., and Kansas City, Mo., plants.

All Ford truck plants are scheduled for daily overtime this week (Jan. 26).

Ford's Twin Cities, Mo., and Norfolk, Va., plants are slated for overtime next Saturday (Jan. 31).

Canadian assemblies on the rise

Canadian car makers targeted production of 21,224 units last week, 25.57 percent more than the previous week's 16,902 and 1.37 percent more than the year-ago week's 20,937.

So far this year, 54,941 cars have been assembled, 17.32 percent below the 66,448 completed last year at this point.

Truck production was pegged at 16,732 units last week, 4.11 more than the previous week's 16,071 but 11.71 percent below the year-ago week's 18,951.

Year-to-date, 48,697 trucks have been built, 22.94 percent below the 63,191 assembled last year at this time.

General Motors' Ste. Therese, Quebec, plant, resumed output of the Oldsmobile Cutlass Supreme and Pontiac Bonneville and Grand Prix last week.

The plant had been idle for two weeks for inventory adjustment.

AMC, UAW meet in bid to save Kenosha

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

American Motors officials met with union representatives from its Wisconsin plants last week in a last-minute attempt to negotiate changes in its labor contract and save its $250 million renovation and new-product plan for the Kenosha plant.

AMC must finalize a new union contract and necessary state funding before Jan. 30 to meet a Chrysler Motors deadline for transferring production of Omni and Horizon to Kenosha. On Jan. 17, members of UAW Local 72 in Wisconsin turned down AMC's request to reopen the 1985 contract.

Company representatives, including President Joseph Cappy, outlined AMC's plan for Kenosha last week. They met with leaders from Local 72, which represents 2,900 workers at Kenosha, and Local 75, which represents 350 workers at AMC's stamping and engine plant in Milwaukee. UAW regional and international officials also took part in the talks.

An AMC spokesman said the company is requesting changes in both the economic and work-rules sections of the 1985 contract in order to bring a new Jeep model and the Chrysler subcompacts to Kenosha. A new contract would cover only production of the new Jeep. Lower labor costs would enable AMC to take on the Chrysler work.

AMC last week also was waiting for approval of $200 million in loan guarantees by the Wisconsin Legislature to fund the Kenosha renovation plan.

Cappy met with Wisconsin Gov. Tommy Thompson and 25 state legislators last Wednesday (Jan. 21) to present AMC's plans for the plant.

A spokesman for the governor's office said legislative leaders are hoping to draw up a proposal that could be voted on by the legislature this week.

A spokesman for the governor said Thompson was "very optimistic" that the loan guarantee would be approved.

Chrysler Motors has said it would like to build 150,000 to 200,000 of the subcompacts annually for five years in AMC's Kenosha plant beginning this fall.

AMC already has a 2½-year contract to build Chrysler full-sized rear-wheel-drive M-body cars in Kenosha beginning in late February. AMC has said if the renovation is not approved, the Kenosha plant will close in 1989 when AMC phases out the Alliance and finishes the M-body contract.

Corrections

A story in the Jan. 12, 1987, issue of Automotive News erred in stating where 2.3-liter four-cylinder turbocharged engines for the 1986 model Ford Thunderbird were assembled. Those engines were produced at Ford's facility in Taubate, Brazil.

A story on Ford's Casting Division in the Dec. 29, 1986, issue incorrectly stated that Ford bought 40 percent of Intermet. Ford has a 40-percent interest in a joint venture with Intermet in New River Castings Co., Radford, Va.

Fiat earns $1.5 billion, top European automaker

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Fiat Group amassed earnings of more than $1.5 billion last year, making it Europe's most profitable auto manufacturer.

The Italian company said 1987 financial results "will be at least in line with 1986." Cars and commercial vehicles account for approximately 75 percent of sales.

In his annual letter to shareholders last week, Fiat Group Chairman Giovanni Agnelli said the company has "reached an income level that puts us in a position of strength vis-a-vis the challenges we have set for ourselves and the inevitable cyclical scenarios that lie in store for us."

Fiat said it will report gross profit of more than 2 trillion lira ($1.57 billion at current rates) for 1986, up more than 50 percent from 1.326 trillion lira in 1985.

The group has not released its final net results, but it reported that operating profits climbed 12.5 percent to 2.550 trillion lira ($2 billion) even though group sales rose only 7 percent to 29.02 trillion lira ($22.8 billion).

Agnelli said 1986 sales should be viewed in light of a 22 percent drop in the value of the dollar in 1986, reduced inflation, less purchasing power among petroleum-exporting countries and decreased demand in the agricultural sector.

But he also cited strong European sales in several markets, notably the automobile sector.

"Achieving profits of over 2 trillion lira and reducing group indebtedness to around 1 trillion in spite of acquisitions and investments demonstrates Fiat's managerial and operational capacity that has developed over the last few years," Agnelli said.

Elsewhere in Europe, analysts expect the 1986 results that will be reported by the big German groups to be more adversely affected by the fading dollar. Volkswagen Group is expected to report the equivalent of about $300 million in net profits, and Daimler-Benz is expected to report that its 1986 profits matched its 1985 profits of 1.68 billion German marks ($933 million). Ford of Europe is expected to report net profits in the $650 million range.

By almost any standard, 1986 was a good year for Fiat. In addition to continuing a string of big profit gains since recovering from a late-1970s slump, Fiat:

- Bought Alfa Romeo, the Italian auto manufacturer.
- Formed a joint commercial vehicle venture between Iveco and Ford of Europe.
- Purchased a majority shareholding in Matra, the French automotive components manufacturer.
- Acquired a minority stake in Westland helicopters.
- Engaged in several other smaller manufacturing agreements and joint ventures.

In Europe, Fiat boosted share of the new-car market to 12.5 percent from 12.3 percent in 1985, according to industry estimates compiled by Automotive News.

Its car sales in western Europe jumped 11.8 percent to 1,458,300 — the biggest increase of any European company. Fiat is second to the Volkswagen Group in sales in western Europe.

Fiat said its auto production in Italy grew 20 percent to 1,526,000 units.

Fiat even succeeded in buying back for $3 billion the 15 percent of its stock held by Libya.

That move led to the only real blemish on Fiat's 1986 record. The subsequent unloading of $2.1 billion of Fiat S.p.A. stock on the international equity market led to huge losses for underwriters and a temporary decline in Fiat's stock price.

"We can say with great satisfaction that our shares are now present in many areas and markets and are held by every type of investor," Agnelli said.

Though financial results for individual group sectors were not released, Fiat Auto sales rose 13.8 percent to 16.4 trillion lira ($12.9 billion). The company held 54.3 percent of the Italian new-car market, up from 52.3 percent the year before.

Commercial-vehicle sales increased marginally to 5.450 trillion lira ($4.28 billion) from 5.394 trillion lira. Iveco unit sales fell 4.5 percent to 94,657, but the figure does not reflect sales by Iveco Ford Truck Ltd., which will be consolidated beginning this year.

Sales in Fiat's component business improved 11 percent to 3.679 trillion lira ($2.89 billion).

Overall group investment jumped 94 percent to 2.780 trillion lira ($2.18 billion), including 1.1 trillion ($865 million) for acquisition of Alfa Romeo fixtures and plants as part of the takeover of the Italian company.

Meanwhile, net indebtedness dropped 55 percent to 1.050 trillion lira ($825 million). Research and development expenses totaled 920 billion lira ($723 million), up from 820 billion lira in 1985.

Group employment rose from 226,222 in 1985 to 228,450, while the number of workers on layoff was reduced from 8,670 to 2,670.

Porsche revives study of model under $20,000

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STUTTGART, West Germany — Porsche AG has an entry-level 984 sports-car study underway, but plans for the sub-$20,000 model have not been approved, according to Chairman Peter Schutz.

Related stories on Page 212

The mid-engined, two-seater program, previously dubbed 919/921, reportedly has been under serious debate recently at corporate headquarters here.

"We do continually dream and plot and plan to come up with a sports-car concept that would be more affordable," said Schutz. "That's a tough one, but we'll keep trying."

According to Schutz, the 984 "is a study of that type, but it is not really a project. I wish it were."

But he said no final decision has been made on the 984.

"Right now we don't see any way by conventional means to build a car like that for under $20,000 without getting into quantities that go beyond the Porsche concept," he said. "We're not going to build a Mazda or something, because you already have those things."

Porsche was reported to have abandoned the 984 project early in 1986, but the project was revived last summer.

The company is said to be considering a Volkswagen-assembled car powered by either a modified 16-valve version of the Porsche-designed four-cylinder 1.5-liter Seat engine, or a 1.8-liter-to-2.2-liter air-cooled four-cylinder powerplant put together from existing Porsche components.

Speculation has centered on production of the 984 at Volkswagen's plant in Hannover, West Germany, after the VW Type 2 is phased out in about three years.

But the current weak dollar against the German mark is proving a detriment to the program. Besides lowering margins on a relatively low-priced car, the currency rate is depressing corporate profits and reducing the development funds available for an all-new vehicle.

Fresh look for Volvo 480
The small design team of Volvo Car BV in the Netherlands has produced this cabriolet version of the new 480 coupe. The car was due to be displayed at the Amsterdam auto show which opens Thursday, but the company withdrew the entry because of what it called "other priorities." There are no known production plans so far. The 2 + 2 cabriolet features a roll bar and a high rear deck into which the soft top can be folded. The coupe version of the front-drive 480 makes its U.S. debut this spring.

Luxury shakeout seen

Europeans may be too bullish on U.S.

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — A major shakeout may be on the horizon for European automakers seeking a niche in the American luxury-car market.

Despite ambitious end-of-decade sales targets set by several manufacturers, many industry observers say U.S. prestige segments cannot absorb all the Europeans.

"Not everyone can pile in and continue to make money," said John Wormald, an industry analyst at Booz, Allen & Hamilton's London office.

"They've done exceedingly well, but all good things must come to an end," added Peter Dupont of Phillips and Drew, a London brokerage house. "There's not room for everybody."

French, British and Italian carmakers are hoping to emulate the success of German and Swedish companies in satisfying American demand for exclusive European marques.

But the U.S. luxury/executive class market would have to grow even beyond the most optimistic projections if Austin Rover, Alfa Romeo-Lancia, Peugeot, Renault, Ford of Germany's Merkur and, perhaps, Adam Opel and Citroen, were to realize sales goals for the early 1990s.

At the same time, four established U.S. luxury importers, Mercedes-Benz, BMW, Volvo and Saab, are adding production capacity. Along with Audi, Jaguar and Porsche, they are counting on at least moderate U.S. growth in the next three-to-four year period.

Meanwhile, the same market is being targeted by U.S automakers and the Japanese. The Japanese are being forced into more profitable segments because of low-cost competition from Korea, Taiwan, Brazil and Mexico; new pressure to further reduce United States shipments; the strong yen, which makes competitive pricing for Japanese mass market cars more difficult.

According to J.D. Power and Associates, luxury-car sales in the United States have nearly doubled since 1980 to 1.2 million. Sales are expected to grow to almost 1.5 million in 1990.

If European companies maintain their current share of about 43 percent, it would put their volume at 645,000 by the end of the decade. That number presupposes the Europeans can hold their own in

GM halts CVT work as others move ahead

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — General Motors has suspended development of its continuously variable transmission system and may have given up on CVT altogether.

The decision to "defer" development coincides with Fuji's introduction of a CVT option on the Subaru Justy in Japan and Ford's recent announcement of plans to begin offering its own version in Europe this summer.

A Ford spokesman said that a CVT option for the United States market "is in the discussion stage."

After spending a reported $180 million to prepare for CVT production at its Strasbourg, France, plant, GM said the system's precision parts — a pulley and steel belt — have proven unsatisfactory.

The company said last week it is "still interested in CVT, but the development program was deferred due to the non-availability of an acceptable belt and pulley. Obviously, when a belt and pulley is determined to be acceptable GM will proceed with the development of CVT."

But a GM-Europe source last week indicated that the automaker is more interested in seeing how Ford, Fiat and Subaru fare in the marketplace with CVT systems before it revives its own program.

"Even if CVT development were continued, Opel and GM in Europe would have to decide if it is something they want to have in their cars," he said. "We want to see if there is a market for it."

GM has been involved in development with CVT specialist van Doorne Transmissie, of the Netherlands, since the 1970s. Van Doorne, which also helped develop the Ford, Fiat and Subaru systems, is 49 percent owned by MIP, a holding company controlled by the Dutch government.

Some GM engineers, particularly those at Opel, have never masked their lack of enthusiasm for the van Doorne CVT, which was scheduled for introduction in 1985 but never reached the marketplace.

The system reportedly involves sophisticated electronic controls for gearboxes mated to 1.6-liter to 2-liter engines, compared with mechanical controls for gearboxes for 1-liter to 1.6-liter engines developed by Van Doorne, Fiat and Ford. Subaru's electronically controlled unit, known as ECVT, is suitable for torque from engines up to 1 liter.

But GM-Europe said its parent firm's Hydramatic Division, which is responsible for transmissions, remains dissatisfied with the level of torque the belt can handle.

"They leaned back on the program a while ago because of the pulley problem," said the GM-Europe insider. "I don't know if they are going to push it again." There have been reports that Adam Opel, GM's engineering base in Europe, is developing a more conventional automatic transmission.

But even as GM's CVT program appeared to bite the dust last week, Ford of Europe announced that it will offer its own system as an option on 1.1-liter Fiesta models this summer. The gearbox is rated for engines up to 1.6 liter and may be fitted on certain Escort models later.

Ford's system, dubbed Continuously-Variable Transaxle (CTX), operates without conventional gear wheels and torque converter.

The appeal of the CVT is that it provides the fuel economy of a manual transmission without acceleration jerks and with little performance loss compared with a manual gearbox.

Though several of the major components of CTX (castings and differentials) are manufactured by Ford, the system will initially be produced in low volume on a subcontract basis by Volvo Car BV, of the Netherlands, for van Doorne. The transmissions will be supplied to Ford and Fiat for installation in vehicles.

Ford will later transfer production to its own plant in Bordeaux, France, where Ford has invested $120 million in CTX tooling and plans to build "sufficient volume to meet Ford's European needs, including fitment to higher-powered models, as well as those of Fiat and other vehicle manufacturers."

CTX output is expected to total 10,000-20,000 in 1987.

Chrysler tag for LeBaron is $11,295

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

POINT CLEAR, Ala. — The 1987 Chrysler LeBaron coupe, designed to help Chrysler Motors carve out a niche in an upscale, luxury market, will carry a base retail price of $11,295.

The car is being shipped to dealerships and is expected to be available nationally in February.

"In addition to being a nice high-margin car for us, the new LeBaron is going to be a great image booster," said Chrysler Motors President Harold K. Sperlich at a press preview of the Chrysler LeBaron and Dodge Daytona here.

"It will typify and help lead the upscale/luxury image we are trying to carve out for our Chrysler brand," Sperlich said of the LeBaron.

Retail prices of Dodge Daytona models were also announced during the preview. The Dodge Daytona has a base retail price of $9,799; the Daytona Shelby Z carries a base sticker of $12,749, and the Daytona Pacifica will be offered at a base price of $13,912.

"LeBaron will be jockeying for position in the mid-specialty coupe race with entries like Olds Cutlass Supreme, Ford Thunderbird and Toyota Celica," Sperlich said. "The field may be crowded, but we think LeBaron's got the legs to make a very strong showing."

LeBaron coupe: "A great image booster"

Sperlich said LeBaron will gain sales strength because it is the only front-wheel-drive car in the mid-specialty coupe segment.

LeBaron's $11,295 base sticker compares with $11,539 for the Cutlass Supreme, $13,028 for the Thunderbird and $10,598 for the Celica.

Chrysler Motors has not announced the price of the LeBaron convertible, which will be introduced in the spring.

The LeBaron and Daytona will be assembled at Chrysler's St. Louis No. 1 plant in Fenton, Mo.

Bernard I. Robertson, Dodge general product manager, said Chrysler expects the models to be "volume-limited" in the 1987 model year.

"We didn't start production until November and we've been on a typical new-model acceleration curve through Christmas," Robertson said.

Plant capacity is 240,000 units annually.

"Broadly speaking, the LeBaron will outnumber the Daytona two-to-one," Robertson said of the production schedule.

Thomas C. Gale, Chrysler Motors vice president — product design, said the LeBaron convertible will be the only mid-specialty convertible designed and built from scratch as a convertible.

"We did at first look at cutting the top off the LeBaron coupe," Gale said. "However, the resulting detail execution wasn't good enough if we were going to be serious about maintaining convertible leadership."

DODGE: *Shelby assigned a more important role in building division's performance image*

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

POINT CLEAR, Ala. — Dodge will bolster its performance image in the marketplace by increasing the use of Carroll Shelby's name on future production vehicles.

The move is part of Chrysler Motors' thrust to set up individual identities for the Dodge, Plymouth and Chrysler brands. The company links Dodge with performance, Plymouth with value and Chrysler with luxury.

For 1987, Dodge has positioned the Shelby Z Daytona and the Daytona Pacifica as the lead image vehicles for its entire lineup.

Bernard I. Robertson, Dodge general product manager, said Chrysler Motors' relationship with Shelby will expand.

"Any time we have the opportunity to do a car which provides a lot of performance at an affordable price and has the feel of the kinds of cars Carroll Shelby likes to drive, we're going to put his name on them," Robertson said. "That's why we've brought the name back on the Shelby Z Daytona."

Shelby is a consultant to Chrysler Motors and is also head of Shelby Automobiles, an independent company that produces low-volume performance versions of Dodge vehicles and sells them through a chain of 91 Shelby dealers dualed with Dodge franchises.

"We work closely with Carroll to achieve maximum synergy between the cars we're building in production and the cars he's modifying on the West Coast," Robertson said. "Our goal is to make available to Carroll hardware which we are either working on or contemplating putting on our production vehicles.

"He can put that kind of hardware out on the street in low volume and basically get a feel for the impact it has on the marketplace," Robertson said.

Chrysler is currently working with Shelby, as well as others, to develop four-wheel-drive vehicles, but has no production plans, Robertson said.

Shelby is also involved in Chrysler's exploration of a 16-valve engine, as are Maserati and Lotus.

"We're trying to decide what best fits our various images and what best fits the customer's needs," Robertson said. "There is a lot of cost and complexity in 16 valves."

Robertson also said Dodge's first application of an anti-lock braking system will be offered in the 1988 model year.

Incentive wars: Ford, Chrysler up the ante

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. and Chrysler Motors Corp. followed General Motors' lead last week by increasing the retail incentive ante.

Ford, which had the weekend to study the GM double whammy of a 6/60 warranty plus cash rebates and optional-equipment discounts on selected models, responded on Monday by matching GM's warranty.

Ford also announced a new schedule of annual-percentage-rate finance incentives plus option-package rebates.

Chrysler, which had initiated its own program prior to the GM announcements, sweetened the pot to make its incentives more competitive.

The Ford program, which requires dealer participation, became effective Jan. 23 and runs until March 23 for trucks and until March 31 for cars.

It provides for 3.9 APR financing for up to 24 months, 5.9 APR for up to 36 months, 6.9 APR for up to 48 months and 9.9 APR financing on contracts up to 60 months.

Dealer-stock vehicles covered by the APR incentives include 1986 and 1987 Escort, Tempo, Mustang, Ranger, Bronco II, Lynx and Topaz models, plus 1986 Merkur XR4Ti models.

In addition, Ford offered a $600 rebate on covered cars with a manual transmission and a $300 rebate on cars with an automatic transmissions.

On compact trucks, buyers can choose low-APR financing or a $500 rebate on Ranger and a $600 rebate on Bronco II.

The Chrysler program began Jan. 27 and has no expiration date. It offers 3.7 APR financing for 24 months, 5.9 APR for 36 months, 6.9 APR for 48 months and 9.9 APR for 60 months.

Alternative cash rebates are $500 on 1986 and 1987 Charger/Tourismo, Dodge 600/LeBaron sedans, Lancer/LeBaron GTS, Caravelle, standard Dodge pickups, Dodge Ram 50 and Power Ram 50 mini-pickups and the Dodge Dakota pickup.

Some imported Colt models are eligible for either the APR financing or a $300 rebate.

Carryover 1986 Daytona/Laser models are eligible for APR or a $750 rebate. Chrysler is offering a financing/$1,000-rebate option on 1986 and 1987 Lancer ES and LeBaron GTS premium models and on Chrysler New Yorker and Dodge Ramcharger.

Aries and Reliant 1986 and 1987 models carry low financing plus a $600 rebate or a $900 rebate without APR financing.

Long warranty seen trimming dealer profits

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

General Motors and Ford Motor Co. officials say their extended warranties will spur new-car sales in the long term, but there is some concern in the industry that the programs may reduce profits in other departments of auto dealerships.

Among them are the sale of service contracts and rustproofing and profits on general service work.

The 6-year/60,000-mile warranties are new for GM and Ford.

News Analysis

Chrysler Motors has had a 5/50 warranty since 1983, but Chrysler service officials were reluctant to discuss past experience.

GM increased its domestic new-car warranty two weeks ago, and Ford matched GM last week. Both companies now have a 6-year/60,000-mile warranty on the powertrain and a 6-year/100,000-mile warranty against corrosion damage.

Although there are some differences in the two warranties — Ford's imported models are included and the company offers longer coverage for luxury cars on certain major vehicle components — both policies are essentially the same.

Until last month, Chrysler had been the most aggressive warranty marketer in the industry with its 5/50.

As a result of the GM and Ford action, Chrysler has had to adjust ads and commercials which claimed its powertrain coverage is the best in the industry.

At a new-car preview in Alabama last week, Harold K. Sperlich, Chrysler Motors president,

Ford of Europe to design Tempo/Topaz replacement

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Development of the next-generation Tempo/Topaz has been assigned to Ford of Europe's design and engineering staff, according to company sources.

The new car will share a platform with the successor to the European Ford Sierra compact. Both models debuted in 1982 and are due to be replaced in the early 1990s.

Ford is turning to Europe for the next Tempo under a "global" car strategy that is an update of the company's "world car" ambitions of the 1970s.

The new global concept allows for regional marketing capability by tailoring vehicle packages for specific world markets. A European car, for example, would retain handling and suspension refinements targeted at local buyers.

But the concept relies on common platforms and interchangeable parts sourced throughout the world. Such projects are seen as a way to reduce product design and development costs and are believed to be a cornerstone of Ford's clean-sheet Alpha program for reducing manufacturing costs.

Production plans for the compact car have not been settled. But Ford's global framework calls for body and assembly operations on the continent in which they are sold.

International platforms are seen as the first step in the development of a fully global engineering-manufacturing-purchasing organization previewed for the mid-1990s.

Both Tempo and Sierra are at roughly the mid-point for their product lives. In Europe, the Sierra has just been re-skinned and the Tempo will get a facelift in North America for the 1988 model year.

Philip E. Benton, executive vice president — International Automotive Operations, told Automotive News several months ago that Europe will be involved in Ford's global car development plans. He said Ford of Europe's engineers most likely will do the next Tempo, since "that size has been so important to them" and "the Sierra has been their lifeblood."

Ford reportedly was set to involve Alfa Romeo in its Sierra replacement program before Fiat won control of the Italian automaker last fall with a competing bid.

Under Ford's scheme for Alfa Romeo, the program would have produced a version of an early 1990s Sierra successor at Alfa Romeo's plant in Pomigliano, Italy. The car would have been built with 80 percent "global" content and 20 percent Alfa componentry and styling geared for the European market.

According to various reports, Ford's Japanese partner, Mazda, has been given design and development responsibility for the company's Escort successor, though it is unclear what role Ford of Europe will play in the worldwide Escort program.

Ford has confirmed that its European staff, rather than Mazda, will build the next-generation Fiesta. But according to recent reports, that car could be moved into the Escort class in Europe, while the next B-car here comes off the Mazda-designed Festiva minicar platform.

AUTOMOTIVE NEWS STAFF REPORTER

Sales of diesel-powered cars continued to decline in 1986, dropping 56.52 percent from the 1985 figure.

Last year's total was 40,585, compared with 93,345 in 1985.

Demand for automotive diesels has plummeted since reaching a high point of 510,670 in 1981. Sales have decreased each year since then.

In 1983, there were nine automakers with 15 car divisions selling diesel-powered cars. In 1986, only six automakers with seven divisions sold diesel cars.

General Motors dropped out of the diesel-car market for 1986. In 1981, it had nearly 60 percent of the market with 304,960 diesel sales. Its sales dropped steadily through 1985 when it sold 3,824 units, representing only 4.10 percent of the market.

The marketers of diesel-powered cars are Ford Motor Co., Volkswagen of America, Mercedes-Benz of North America, Peugeot Motors of America, Volvo of America Corp. and Toyota Motor Sales U.S.A.

Spokespersons for the diesel-carmakers attributed most of the sales decline to the fact that the price of gasoline has declined while the price of diesel fuel has stayed at a comparably high level.

Volkswagen took 36.05 percent of the 1986 diesel market, selling 14,630 units. That was 48.72 percent below its 1985 total of 28,548 units.

VW's heyday for diesel sales came in 1981 when it sold 125,019.

Mercedes-Benz was a close second to VW last year, with 14,329 sales or 35.30 percent of the market. Its diesel sales fell 56.67 percent from the 33,077 sold in 1985.

In 1983, Mercedes sold 54,044 diesel units — its record.

Ford was third in diesel volume in 1986, with 7,000 units and 17.24 percent of the market. Its sales dropped 53.94 percent from 1985's 15,199 units.

Ford reached its diesel sales high in 1984 when it sold 35,352 such cars and captured 22.72 percent of the market.

A spokesman said Ford's diesel sales last year were rounded. He said the company does not actively monitor diesel sales because they are so low.

Volvo sold 2,150 diesels last year, for 5.30 percent of the market. That was down 76.27 percent from 9,065 in 1985.

Peugeot sold 1,609 diesel cars in 1986, for 3.97 percent of the market. Its sales were down 21.63 percent from the 2,053 sold in 1985.

Toyota sold only 867 diesels last year, for 2.14 percent of the market. Toyota has sold diesel autos only since 1983. Toyota reached its high mark in 1984 when it sold 8,348 units.

Japan's Hino buys parts from Taiwan

TOKYO — Hino Motors Ltd. will import about $310,000 worth of parts from Taiwan in fiscal 1986, which ends in March.

The Taiwanese suppliers are said to be Goshen Industries Inc., Tsuang Hine Corp. and Tatung Die Casting Co., and the parts include aluminum die casting brackets, leather seats and seat frames to be used in buses.

Hino, which is associated with Toyota Motor Corp., is expected to increase parts imports to $1.9 million by 1989. Hino produces about 70,000 trucks and 6,000 buses annually.

SHAKEOUT

FROM PAGE 2

the face of domestic and Japanese competition, a depressed dollar not expected to soon recover against European currencies, possible trade restrictions, and new concerns about quality.

Meanwhile, a conservative count of various sales objectives puts the combined target for the Europeans in the U.S. luxury market at nearly 900,000 by 1990.

Carleric Haggstrom, executive vice president in charge of long-range marketing planning at Volvo Car Corp., predicts 3-5 percent annual growth for the over $15,000 class in the United States, even if the overall market stays at about 11 million. But not all growth will be demand-driven, he said. Some will result from more aggressive marketing spurred by oversupply in the segment.

"If you add the ambitious plans of all the manufacturers, 3-5 percent growth annually isn't enough," said Haggstrom. "The segment size isn't big enough so the competition will be more fierce. We will have to face the facts. I don't think all the goals can be realized."

Gunter Kramer, BMW's board member responsible for worldwide sales, acknowledged that there will be greater competition. But he added, "We're happy to have Sterling in. Hopefully, Lancia will get a chance, too."

He said, "It will be very tough, but we must leave the decisions to consumers. We certainly face an over-capacity in the world market place."

The major European luxury-class exporters — Mercedes, BMW, Audi, Volvo, Saab, Porsche and Jaguar — sold 471,476 cars in the United States last year, compared with 437,873 in 1985. The same seven companies sold 217,420 in 1980.

Lincoln-Mercury's Merkur franchise, Peugeot and Alfa Romeo combined for sales of another 36,-852 cars last year.

Though most industry analysts expect U.S. luxury-car segments to grow faster than the overall market, some feel the upper limits are at hand.

"I tend to think the (European) imports have peaked, or very close to it," said Dupont. "Everyone looks at the U.S. as the big cash cow, but something has to give. It is just not possible for everyone to come along and sell 100,000 cars a year at $20,000 apiece."

The consensus, however, is that the segment will continue to grow.

"It would take something like a Wall Street crisis to prevent it," said Daniel Jones, an auto industry specialist at Britain's University of Sussex.

Porsche AG chairman Peter Schutz cited demographic data showing that the population of entreprenurial types who comprise Porsche's customer base will grow 25 percent to 40 percent over the next five to six years.

"If that's true, then the basic market for our type of product is growing," he said.

"It is less clear to me that there will be a shakeout in the (luxury) market itself," added Wormald. "I'm not sure demand will abate and I'm not sure there will be a terribly effective counterattack from the U.S., and the Japanese threat is more long-term."

But even a robust appetite for European nameplates is unlikely to gobble up everything Europeans will have to sell in 1990.

A fall in value of 40 percent by the dollar against the German mark since January, 1985, has reduced the Germans' competitiveness.

"I think the Germans will flatten out a bit," said Jones, who estimates that Mercedes and BMW will each add about 10,000 in U.S. sales between now and the end of the decade.

Dupont is less optimistic about the Germans.

"If they can hold on to the volume they have now they would be doing well," he said.

Mercedes sold 99,314 cars in the United States last year; BMW, 96,-759. The two companies have a combined increase of 116 percent in the United States since 1980.

A Mercedes spokeswoman in Stuttgart said only that the company plans to "slightly increase" U.S. sales in the coming years, but she declined to cite an official target for 1990.

Audi America sales fell 20 percent last year, but Audi hopes it will rebound quickly with the new Audi 4000 set for a U.S. debut.

Porsche sold 30,471 in the United States in 1986, up from 25,-173 in 1985, and nearly a three-fold increase since 1980.

Schutz said Porsche's U.S. sales will rise to 34,000-35,000 "over the next few years." While he thinks there is room in the marketplace for Porsche to go even higher, Schutz said it will not happen without new products or technological developments.

The weak dollar may stall a GM program to market Opels through Cadillac dealerships, and could also play havoc with Ford's plans to sell 100,000 Merkur- and Scorpio-badged models from Germany by the end of the decade.

A Ford of Europe source conceded recently that the original 100,000 end-of-decade Merkur/Scorpiosales objective has probably been lowered.

Prospects for Sweden's Volvo and Saab seem brighter. Saab, with U.S. sales of 47,414 last year, expects to be selling at least 60,000 by the end of the decade.

Volvo, the leading upscale importer in the United States with sales of 113,257 last year, could rise to 140,000 by 1990, said Jones. Volvo will begin selling its Dutch-built 480 coupe in the United States late this year, extending market coverage to the low end of the prestige range.

Haggstrom said Volvo expects to continue to increase its U.S. market by 7 percent to 8 percent annually, putting U.S. sales at about 150,000 in 1990.

Jaguar expects to be selling at least 30,000 cars in the United States annually by 1990, based on plans to be producing more than 60,000 annually at that time.

But European automakers expecting to repeat the sharp growth created by the yuppie uprising of the early 1980s could be in trouble.

Peugeot, now selling fewer than 15,000 cars in the United States, is aiming at 40,000-60,000 by the end of the decade. Austin Rover's U.S. distributor says it could go from zero to 80,000-90,000 by 1990.

Renault will try to penetrate the lower part of upscale market with the Renault 21 (Medallion in the United States). It hopes to sell 50,-000 this year in the United States. Alfa Romeo, teamed now with Lancia under the Fiat Auto umbrella, would go from 8,201 cars last year to 55,000-60,000 by 1991. Merkur would rise from 14,315, possibly to 100,000.

Should Citroen enter the U.S. market with its next-generation CX, and Opel with its replacement for the Senator due this spring, competition will become even more fierce and European exclusivity will be threatened.

As it is, the U.S luxury sector is far from a readymade market for European nameplates. Lincoln-Mercury's troubles with Merkur suggests that a German heritage alone does not guarantee success. Peugeot has languished for lack of a status symbol image in the United States. And Audi's lapse in 1986 shows the sensitivity of buyers in the segment to perceived quality blemishes.

A European shakeout could be decided on quality issues, according to Jones. Even the Germans will have to pay attention. Daimler-Benz has of late had disquieting publicity in European car buff books about quality, a problem analysts pin on rapid increases in volume.

"The Germans have the price elasticity to survive the currency exchange," said Jones. "But what might hurt is a decline in quality. We're hearing quite a bit about problems at Daimler, BMW and Audi and it is probably a bit of complacency. They can't afford to let quality slip."

Industry observers believe reputations for high quality are crucial to the success of Austin Rover, Alfa-Lancia, Peugeot and Renault. Though improving, the production quality of British, French and Italian cars is said to lag behind that of the Germans.

Jaguar's revival in the United States has been founded not only on quality improvements, but on a strong dealer-distributor support network that boosts customer satisfaction scores. The Rover Sterling will need the same kind of support system to succeed in the United States, say analysts.

"Jaguar has done a good job with its distributors and that is an interesting lesson for Austin Rover," said Jones. "The Rover Sterling is a good car, but a very complex one. The car is going to have quality problems and they know it."

Jones said he would be surprised if Rover can achieve 1990 sales of 80,000-90,000, but predicted "something much more modest — 40,000 if they're lucky."

Renault's prospects as a high-volume exporter to the United States depend on maintaining its partnership with American Motors, an issue expected to be decided early in new chairman Raymond Levy's tenure.

Without AMC's dealer network, Jones said Renault has little hope of developing into a major exporter. He also termed Peugeot's goal of reaching 50,000 by 1990 "overambitious."

"I don't think they will sell more than 20,000 by the end of the decade — 30,000-40,000 at the outside," he said.

Jones called Alfa-Lancia's plans to sell 55,000-60,000 annually unrealistic, pegging it at "10,000-15,-000, maybe a bit more than that." He added, "I need some evidence that they are not just the bottom of the pack on quality."

Jones predicted solid growth for Saab, though he added that 60,000 by 1990 could be a bit optimistic. Volvo, with the new 480 coupe from Volvo in the Netherlands, could increase to 140,000, he said.

New protectionist sentiment in the U.S. Congress could impact the strategies of those European makers selling over 100,000 cars annually. "I think they are actually more nervous about trade policy than they are about currency," Jones said.

"Trade restrictions could happen," added Dupont. "No doubt GM is being squeezed on one end by the Far East and at the other by the Europeans."

Dupont said he expects U.S. producers "to get more attuned to what people are looking for in that segment. My gut feeling is that the thing has topped (for the Europeans.)"

European prestige imports:

The record and the future

Manufacturer	1985	1986	1990
Alfa-Lancia	4,523*	8,201	55,000— 60,000
Audi	74,061	59,797	75,000— 90,000
Austin Rover	—	—	80,000— 90,000
BMW	87,873	96,759	110,000
Jaguar	20,528	24,464	30,000— 33,000
Mercedes-Benz	86,903	99,314	110,000
Merkur	8,974	14,315	80,000—100,000
Peugeot	15,536	14,336	40,000— 60,000
Porsche	25,173	30,471	33,000— 35,000
Renault	7,205	4,152	50,000— 70,000
Saab	39,068	47,414	60,000— 65,000
Volvo	104,267	113,257	140,000—150,000
TOTAL	474,211	512,480	693,000—973,000

The 1985-86 figures are actual sales. The 1990 figures are various independent estimates. In addition, GM's Adam Opel and Peugeot group's Citroen division may become importers during the period.

SALES

Canada '86: Truck sales up 7%, cars coast downward

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Domestic new-car sales in Canada for calendar year 1986 dropped 3.71 percent below the 1985 total, while new-truck sales rose 7.19 percent for the year.

Canadian new-car dealers delivered 773,015 cars in 1986 compared to 802,800 in 1985. New-truck sales in Canada totaled 354,441 in 1986 compared to 330,657 in 1985.

"I'd say we've had a pretty normal sales swing, where the United States has had an abnormally high sales year with sales incentives and tax incentives," said Dennis DesRosiers, a Canadian automotive analyst.

"Canadian automotive sales peaked last summer and slowed down the rest of the year. I would expect that to continue, but with no drastic drops in sales," DesRosiers said.

December new-car and new-truck sales in Canada also showed a decline. Canadian dealers delivered 42,999 cars in December, down 12.99 percent from December 1985, and 25,627 trucks, down 4.67 percent from the year-ago-month. Both Ford Motor Co. and Chrysler offered incentives on cars and trucks in December, but sales were below year-ago levels.

All domestic automakers except General Motors showed a decline in Canadian car sales for 1986. GM was up 1.19 percent.

MARKET SHARES
December 1986

Cars	
General Motors	45.82%
Ford Motor Co.	28.11%
Chrysler Motors	23.56%
American Motors	1.83%
Volvo	.68%
Trucks	
General Motors	36.39%
Ford Motor Co.	39.07%
Chrysler Motors	18.73%
Jeep	5.81%

On a percentage basis, American Motors had the biggest year-to-year drop, falling 40.45 percent. Chrysler's car sales dropped 11.26 percent.

Ford and Volvo experienced modest sales losses for 1986.

Ford domestic-car sales fell 2.33 percent in 1986. Ford Tempo was the best-selling car in Canada in 1986 with 41,854 units. Ford continued to offer incentives in Canada through December despite the expiration of many GM incentive programs in October.

Volvo sales dropped 6.21 percent, falling from 8,012 in 1985 to 7,514 in 1986. A Volvo spokeswoman attributed the dip to a shortage of cars.

On the other hand, three of Canada's four domestic truckmakers showed sales increase in 1986 over 1985. Chrysler was the only company to show a decline as its truck sales were off 1.51 percent. Chrysler dealers sold 62,737 trucks in 1986 compared to 63,702 a year earlier.

AMC had biggest percentage increase. Jeep sales rose 32.79 percent to 15,202 from 11,448 in 1985.

Both GM and Ford reported 8 percent increases. GM sold 151,876 trucks in 1986, up from 140,323 a year earlier. Ford sold 124,626, up from 115,184. The Ford F-series pickup was Canada's best-selling vehicle — car or truck — last year with 49,022 units sold.

DesRosiers said a good business climate and the popularity of compact vans boosted 1986 new-truck sales in Canada.

Low Taurus supply hurt '86 Ford sales

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co., while reporting strong sales for 1986, said deliveries could have been higher if Taurus and Sable had made their debut sooner.

"Our car sales did not match the industry's full-year 4 percent gain, primarily because of the Taurus-Sable start-up mode in the early months," the company said in a report on 1986 sales highlights.

Taurus and Sable were introduced Dec. 26, 1985, and supplies were limited in the early months of 1986.

Ford said its new-car market share hit 21.2 percent in December, well above its 18.2 percent share for the year. Taurus-Sable contributed 5.5 percent in December, as Taurus was the industry's top selling car, Ford said.

Ford Division delivered 1,397,141 cars in 1986, which amounted to 0.78 percent gain from 1985. Lincoln-Mercury's 683,681 deliveries (including Merkur) were down 1.44 percent.

Escort was the No. 2 selling car last year behind Chevrolet Celebrity. The 402,181 Escort sales were the best for any small car and just 6,765 units shy of first-place Chevrolet Celebrity.

In one of the industry's long-time sales rivalries, Lincoln gained on Cadillac. In 1986 Lincoln had 58 percent of Cadillac's sales volume, up from 55 percent in 1985, Lincoln-Mercury Division said.

The division's domestic luxury-car sales set a calendar-year record of 177,584 units, highest since Lincoln-Mercury's founding in 1922. Lincoln Town Car led the way with record sales of 133,175, which amounted to 1.2 percent of industry sales, the division said.

Lincoln-Mercury set several records in 1986.

"Among highlights was a 26-percent sales increase for the fourth quarter from a year earlier, the best for any domestic division.

"In December, Lincoln sales were a record 91 percent of Cadillac Division. In addition, Town Car sales of 17,278 were a record for any month and reached a record share of 1.8 percent of industry," the division said.

Rolls-Royce sales up 9.5% in 1986

LYNDHURST, N.J. — Rolls-Royce Motor Cars reported that sales of its Rolls-Royce and Bentley models increased 9.5 percent in 1986.

The company sold 2,603 cars in 1986 compared to 2,377 in 1985, an increase of 226 units.

In the United States, Rolls-Royce's largest market, the company sold 1,155 cars in 1986 compared to 1,110 in 1985, for a 4 percent increase.

Robert Schwartz, president and chief executive officer of Rolls-Royce here, said sales should remain stable during the next year, but Bentley sales should substantially increase for 1987 in the United States.

Schwartz said the company expects annual Bentley sales in the United States to reach 500 by 1990. About 150 sedans have been allocated for this model year.

Rolls-Royce introduced a new Bentley Eight model last fall in New York.

Chrysler hits peak for car-truck sales

DETROIT — Chrysler Corp. said it sold an all-time record 1,905,150 vehicles in the United States during the 1986 calendar year. The previous high was 1,901,633 in 1973.

Chrysler's total car sales of 1,308,991 units were up 5 percent over 1985 and were the best since 1976 when 1,324,672 cars were sold.

Tom Pappert, Chrysler group vice president of sales, said, "Our Dodge and Chrysler-Plymouth dealers have done a great job. The introduction of the mid-size Dakota truck and the new Plymouth Sundance and Dodge Shadow models helped put us over the top.

"And we have more all-new products in 1987. For starters, the V-6 Plymouth Voyager and Dodge Caravan were added to our mini-wagon line in January, and the Chrysler LeBaron coupe debuts in February, with more new products scheduled each month for the first half of the year.

"We're looking for another strong showing in 1987."

Chrysler said its domestic car sales of 1,173,463 units in 1986 represented a 3 percent increase over 1985 and were the third highest in the company's history.

The company said that it increased its share of the total car market, including imports, to 11.5 percent in 1986, its sixth straight annual gain. Chrysler said it was the only domestic manufacturer to increase its domestic car sales and market share over the previous year in 1986.

Dodge Division sold more than one million vehicles for the first time in history, selling 525,462 cars (including imports) and 486,076 trucks for a total 1,011,538 units.

Total truck sales of 596,159 were second to the company's all-time high of 606,388 in 1985.

The company said its December truck sales of 65,184 were an all-time monthly high and were up 36 percent over the previous December.

Chrysler increased its share of the subcompact and compact segments during 1986, with the Plymouth Reliant and Plymouth Horizon the top sellers among company nameplates. Sales totals were 130,043 for Reliant and 111,092 for Horizon.

After the America models were introduced in May, sales of Horizon and Omni increased 82 percent through December compared to the same period in 1985. Chrysler said its share of the domestic subcompact segment rose 3.2 percentage points, from 5.3 percent to 8.5 percent during the period.

For the year, Omni sales increased 37 percent; Horizon was up 31 percent; and Dodge 600, Plymouth Caravelle, Chrysler LeBaron and New Yorker also scored gains, along with the imported Vista (49 percent) and Colt captive imports.

The Dodge Caravan was Chrysler's best-selling truck line with sales of 115,964, followed by the Plymouth Voyager at 110,083 and the Ram pickup at 106,451.

The Ram Van, Ram 50, Voyager and Caravan all had sales increases during 1986 over the prior year.

Sales of the trucks Chrysler imports from Mitsubishi Motors Corp. were a record 83,474, a 19 percent increase over 1985, and the third consecutive annual increase.

String of records continues for Saab

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Last year was not one highlighted by a great deal of sales record-breaking activity in the United States, but the 359 Saab dealers here did manage to put some new material in the record books.

They retailed 47,414 cars in the year compared with the previous record of 38,243 cars set by sales of 350 dealers in 1985. Tourist deliveries in 1986 totaled 837 units down from 1,021 in 1985, the company said.

The sales figures include cars sold by Saab dealers in the United States but delivered abroad. Those cars usually are bought by tourists, members of the diplomatic corps and business people who drive their cars in Europe then have them shipped home. Under Saab's plan, delivery can be in any of 11 European cities, the company said.

"U.S. Saab dealers set consecutive sales records every month for the past 57 months, an unprecedented achievement," said Robert J. Sinclair, president of Saab-Scania of America, based in Orange, Conn.

"We are targeting sales of 50,000 cars in 1987, but how many we actually sell this year depends largely on continued expansion of factory production to meet demand in the United States," Sinclair said.

Saab's sales growth in this country has been spectacular. Since 1980, its year-to-year sales have grown steadily. They climbed 7 percent in 1981, 25 percent in 1982 and 42 percent in 1983. Sales in 1984 climbed 27 percent above those of the preceding year. In 1985, they rose 17.0 percent, and last year they were up 24 percent from year-earlier levels.

Saab-Scania also reported record sales on a worldwide basis for 1986. Its dealers around the globe delivered 126,000 cars, up 18.0 percent from the 106,600 cars sold a year before.

The company said sales of the Saab 900 line were about the same as those in 1985, but sales of the new Saab 9000 rose to 32,000 units in 1986 from 7,000 units in 1985.

Export sales of 97,000 units accounted for 77 percent of the total versus 80,000 a year before.

In Western Europe, excluding the Nordic countries, sales rose 25 percent. "Significant increases were reported from the four major European markets, France, Italy, the United Kingdom and West Germany. Sales in Switzerland, Spain and Austria also grew substantially," Saab-Scania said.

Jaguar sets record in U.S. and Canada

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Jaguar car sales, bolstered by improved availability, reached record highs in the United States last year and, in each month, set records in Canada.

The U.S. mark of 24,464 units meant the fifth record year in a row and compared with 20,528 units delivered in 1985.

In Canada, Jaguar sales totaled 2,032 units, up 54.5 percent from 1,315 sold in 1985.

"After a year in which every month and every model set new sales records, it's not surprising that 1986 was Jaguar Canada's best year ever," said John Mackie, Jaguar Canada president.

"What may be surprising is the size of the increase in a year when the Canadian market experienced a downturn from 1985, a record-setting year."

Jaguar's Canadian success was consistent across the model line, with each model setting records as the year progressed. Mackie said XJ-6 and XJ-6 Sovereign recorded a 40.6 percent increase, while deliveries of XJ-12 Vanden Plas increased 62.3 percent. Sales of the XJ-S Coupe and Cabriolet rose 88.2 percent.

"Repeating, let alone improving on, such success seems a difficult task," Mackie said. "But with the continued strength of our present models and the great interest already expressed in the new Jaguars that will be introduced in April, we are confident in predicting 1987 also will be very successful for us."

EXCHANGE

FROM PAGE 1

So far, as the yen has swung from 260 per U.S. dollar in early 1985 to about 150 now, the Japanese have sought to maintain market share at the expense of lower profits. Their price increases haven't kept pace with the currency changes. As the dollar declines against the yen, Japanese producers tend to raise the prices of their exports.

The fluctuations don't come without risks, however. Economists warn that a too-weak dollar could dramatically raise the price of imports, spur inflation and ultimately bring on a recession.

That possibility aside, the U.S. auto industry is finding itself more cost competitive as Japanese and European products become more expensive in the U.S. market. Some are trying to capitalize on the situation to create a long-term strategic edge.

"Some of our products are becoming competitive without us even lifting a finger," said General Motors Chairman Roger Smith. But that, he suggested, is not enough. "We want to get everything competitive on an economic basis, and then we don't have to worry so much about exchange rates."

The Japanese, meanwhile, will find it tougher to maintain their economic advantage. The current profit crunch could reduce outlays for new-car programs, observers say. Such a cutback could compromise the quality of their products eventually.

On the other hand, the Japanese auto industry, with its knack for thriving on adversity, could turn the current challenge to its own advantage by developing even leaner operations and reducing break-even points.

With a stronger yen, Japanese companies are also finding it much less expensive to build plants in the United States.

However, when a Japanese company is importing equipment from Japan for a plant in the United States, construction costs can rise. In Flat Rock, Mich., Mazda Motor Manufacturing (USA) has watched the price tag on its new assembly plant rise from $450 million to $550 million.

"It takes some counter-measures to cope with the high appreciation of the yen — and that's what we're doing," said Mazda spokesman Jim Gill.

Mazda is responding by cutting costs 10 percent worldwide in such areas as investment in plants and machinery while trying to boost overall efficiency. One area that will be spared deep cuts is research and testing. Mazda is also planning to produce more vehicles outside Japan and use more U.S. suppliers.

Several analysts said they expected further price increases on Japanese exports, and that will pose a challenge for dealers.

"I would not be at all surprised this year to see Japanese manufacturers begin incentives," said Edward Sullivan, director of automotive consulting at Chase Econometrics in Bala Cynwyd, Pa.

Sullivan also said that dealers selling Japanese cars will have to become more aggressive to maintain their sales pace in the face of higher prices. "It should be great news for the consumer," he said.

It also poses a dilemma for U.S. carmakers, who can either bolster profits by matching the Japanese price hikes or try to increase market share by holding the line on prices.

The falling dollar has had an impact in other areas. While domestic sales opportunities have improved, so have opportunities in overseas markets for U.S. exporters. American Motors' shipments of Jeep products to Europe increased 154 percent in 1986 from 1985, a spokesman said.

While the increase reflects stepped-up marketing and an improved overseas dealer network with AMC's French partner, Renault, the dollar's decline against European currencies also has played a big role. "We expect to do a hell of a lot better in 1987," the spokesman said.

Hyundai, the South Korean automaker that has fared very well since entering the U.S. market a year ago, also has a chance to better its position. Its price advantage over its principal competitors has improved between 11 percent and 26 percent since the car's introduction, said a Hyundai Motor America spokesman Ted Kade.

Unlike other currencies, the Korean won has dipped slightly against the dollar in the last year.

Still, Hyundai has raised prices on some models to adjust for the higher cost of parts it imports from Japan. "We are not completely free from the yen," said Kade.

Like the yen, the West German mark has fallen dramatically in the last 18 months, bringing challenges to exporters there. BMW has attempted to build cash reserves and develop improvements for its cars when the dollar is strong, said Thomas O. McGurn, spokesman for BMW of North America. When the dollar declines and the BMW price tag goes up, the company can offer an improved product to go along with the higher price tag.

"Our obvious strategy has been to manage the business risks that currency represents," McGurn said. However, that doesn't keep the company from making investments when the dollar weakens. BMW of North America is raising advertising expenditures and also is going ahead with a new headquarters in New Jersey.

As for U.S. suppliers, the dollar-yen change has brightened their outlook considerably. Suppliers report that doors that were formerly closed to them are now opening up.

"You sense a better reception," said Henry Dehr, vice president — manufacturing for Crotty Corp., a Michigan-based manufacturer of sun visors and interior trim. "These people who didn't want to talk to you before now want to talk to you."

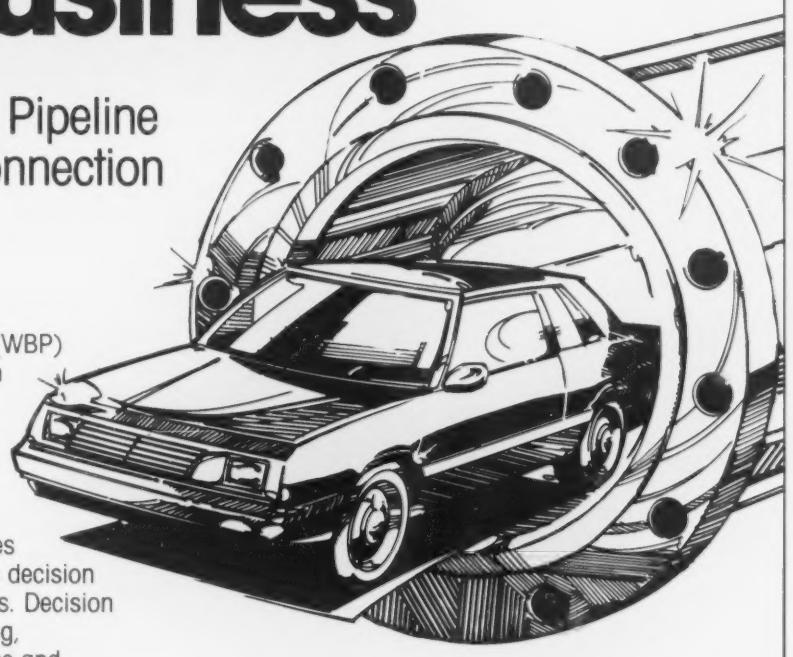
But the chance to quote prices doesn't automatically translate into new business. Suppliers note that Japanese demands for quality are as stringent as ever. It can take several years before a part is tested and a deal is signed. By then, the currency situation could be far different than it was at the start.

"If you can find anyone who is willing to gamble on where the foreign currency rates are going to be in three, five, 10 years, they are either a genius or a fool," said one supplier.

The U.S. government's primary aim in pushing the dollar down is to shrink the nation's burgeoning trade deficit. Though the dollar's decline hasn't had much of an effect so far, economists point out that changes in the trade picture tend to lag behind currency fluctuations.

If the trade deficit does shrink, U.S. industries are expected to recapture some of the territory claimed by foreign competitors. That could mean more jobs for U.S. workers and, in turn, benefit the automotive industry in the simplest of ways: by putting more money in the pockets of potential car buyers.

Tap into The Flow of Worldwide OEM Business



Worldwide Business Pipeline gives you a direct connection

Worldwide Business Pipeline (WBP) is a brand new classification in the Automotive News classifieds. It's also an exciting opportunity for carmakers, suppliers and vendors to find and conduct business with each other.

Each week Automotive News reaches thousands of Original Equipment (OE) decision makers like you, in nearly 70 countries. Decision makers in management, manufacturing, engineering, design, marketing, finance and purchasing. They recognize the Automotive News classifieds as a valuable resource for many facets of their business, including "Help Wanted." That makes Worldwide Business Pipeline a natural extension of our existing OE service.

As a carmaker, you can use WBP to solicit the products, services and sources you want. As a vendor or supplier, you can use WBP as a cost-effective way to break into the automotive industry; solidify and increase your present position; crack a key account; or write an open letter to that hard-to-reach top executive. WBP is direct, business-to-business communication.

You can ask for or offer joint ventures. Sales and representation. Financial services. Real estate and site development. Subcontracting and manufacturing capacity. Overseas partnerships. Parts and subassemblies . WBP puts you in touch, no matter what product or service or what part of the world you want to deal with.

And the rates couldn't be more attractive—just $88/column inch for a high visibility, high impact display ad.

Plan now to use this new classifieds resource, for the OE connections you need. You'll see that Worldwide Business Pipeline lets you tap into the OE business mainstream. Call Marie Hingst to place your ad, at **(313) 446-6065.**

AUCTION DATES

American Motors

Feb. 3 — D-A Auto Auction, New Stanton, Pa.

Feb. 4 — Minneapolis Auto Auction, Plymouth, Minn., and Kansas City Auto Auction, Kansas City, Mo.

Feb. 5 — Evansville Auto Auction, Evansville, Ind.; Todd Auto Auction, Telford, Pa., and Aptco Auto Auction, Taylor, Mich.

Feb. 11 — Columbus Fair Auto Auction, Columbus, Ohio, and Metro Milwaukee Auto Auction, Caledonia, Wis.

Feb. 12 — Corry Auto Auction, Corry, Pa., and Evansville Auto Auction, Evansville, Ind.

Feb. 13 — Floyd Hauhe Auto Auction, Bridgeton, Mo.

Chrysler Corp.

Feb. 3 — Hatfield Auto Auction, Hatfield, Pa.; Arena Auto Auction, Chicago; Metro Auto Auction of Kansas City, Lee's Summit, Mo., and Golden Gate Auto Auction, Fremont, Calif.

Feb. 4 — Butler Auto Auction, Gibsonia, Pa.; Minneapolis Auto Auction, Plymouth, Minn.; Columbus Fair Auto Auction, Obetz, Ohio, and Southwest Auto Auction, Phoenix, Ariz.

Feb. 5 — Clanton's Auto Auction, Darlington, S.C.; Northway Exchange, Clifton Park, N.Y., and Indianapolis Auto Auction, Indianapolis

Feb. 10 — Dallas Auto Auction, (special sale), Grand Prairie, Texas; Aptco Auto Auction, Taylor, Mich.; and NuCarPrep System, Santa Fe Springs, Calif., and Florida Auto Auction of Orlando, Ocoee, Fla.

Feb. 11 — Southern Auto Auction, Warehouse Point, Conn.; A.D.E. of Alabama, Boaz, Ala., and South Seattle Auto Auction, Kent, Wash.

Feb. 12 — Fredericksburg Auto Auction, Fredricksburg, Va.

Feb. 13 — St. Louis Auto Auction, Bridgeton, Mo.

Ford Motor Co.

Feb. 3 — Harrisonburg Auto Auction, Harrisonburg, Va., and Indianapolis Auto Auction, Indianapolis

Feb. 4 — Northway Auto Auction, Clifton Park, N.Y.; Metro Auto Auction of Kansas City, Lee's Summit, Mo.; Minneapolis Northstar Auto Auction, Shakopee, Minn., and Golden Gate Auto Auction, Fremont, Calif.

Feb. 5 — Nashville Auto Auction, Nashville, Tenn., and Skyline Auto Exchange, Fairfield, N.J.

Feb. 11 — Concord Auto Auction, Acton, Mass.; Salt Lake Auto Auction, Salt Lake City; Brasher's Southern California Auto Auction, Fontana, Calif.; Columbus Fair Auto Auction, Obetz, Ohio, and Atlanta Auto Auction, Red Oak, Ga.

Feb. 12 — Arena Auto Auction, Chicago; Dallas Auto Auction, Dallas, and Southwest Auto Auction, Phoenix, Ariz.

General Motors

Feb. 3 — Southern Auto Auction, East Windsor, Conn.; Dallas Auto Auction, Dallas, and 166 Auto Auction, Springfield, Mo.

Feb. 4 — Atlanta Auto Auction, Red Oak, Ga.; Clanton's Auto Auction, Darlington, S.C., and Omaha Auto Auction, Omaha, Neb.

Feb. 5 — Arena Auto Auction, Chicago; Ohio Auto Auction, Columbus, Ohio, and Floyd Hauhe Auto Auction, Bridgeton, Mo.

Feb. 10 — Denver Auto Auction, Englewood, Colo.

Analyst predicting boom for certain auto plastics

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

TOLEDO, Ohio — Lots of people are predicting growth for automotive plastics in the years ahead.

But James R. Best says he has a fix on the kinds of plastics that will make the biggest gains.

Best, president of Market Search Inc., headquartered here, recently completed a 633-page multi-client analysis of the industry.

He said, "Several segments of the automotive plastics market will see unprecedented growth over the next 5 to 10 years."

Those include exterior body panels, wheels, frame components, bumpers, headlamps, fuel tanks, flush window mountings, and a variety of underhood and interior applications, he said.

However, he cautioned, "This growth will also stimulate an unprecedented degree of plastics-versus-plastics competition. For each metal application that's vulnerable, there are several plastics materials and processes under consideration."

Based primarily on interviews with automotive engineers, Best said he can predict which plastics system will be the winner in each application.

His projections are based on U.S. and Canadian production of passenger cars and light trucks.

He said that consumption of fiberglass-reinforced thermoset polyester will surge from 176 million pounds in 1986 to 341 million pounds in 1996. Most of this growth, he said, will be in new all-plastics-bodied cars and vans, where consumption will skyrocket from 14.9 million pounds in 1986 to 186 million pounds in 1996.

Reinforced-epoxy structural applications are predicted to see an even higher, 295 percent, growth over the next 10 years, but from a smaller base of 5.1 million pounds in 1986.

Best said several thermoplastics areas will see important growth over the next 10 years.

Polypropylene consumption will increase by more than 66 million pounds in front- and rear-end systems.

Polyethylene consumption will increase by more than 28 million pounds in fuel tanks. Nylon-modified polypropylene will capture 18.6 million pounds of new business in fender applications.

Functional polycarbonate applications will grow by 16.2 million pounds, while headlamp lenses will add another 1.4 million pounds.

Additionally, polycarbonate/PBT alloy will see growth of more than 44 million pounds in bumper applications, and nylon will see more than 28 million pounds of growth in a variety of applications.

Best said the projections are based on current usage, as detailed in a computerized listing of over 3,000 applications.

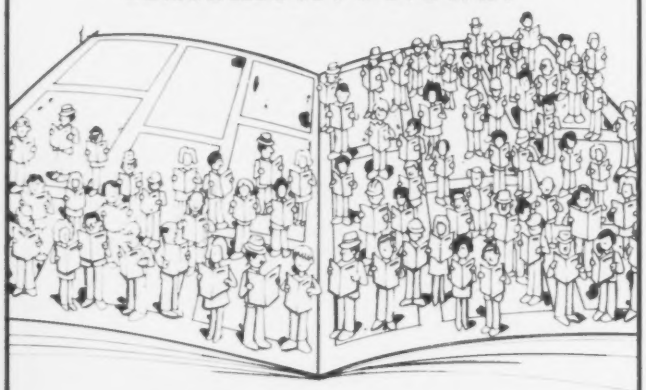
Why rely on word-of mouth when you can build a crowd in the back of Automotive News?



Auction advertising builds stong auction traffic.

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you get a big regional — or even national — attendance with an ad in the Auction Directory.

The Automotive News Auction Directory is a tried-and-proven tool for auctions looking to build attendance or promote a special function. That's what keeps our auction advertisers coming back for more. More results. When you want results . . .

Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

Viewing L.A. and cars

Professor sees rebirth of design role

LOS ANGELES — All right, trivia buffs, what do the following have in common: Magnolia, Rocket, Coyote Special, Daisy and White Swan?

The answer: They were among 72 makes of cars produced in Los Angeles between 1897 and 1920.

The role of Los Angeles as an automotive design and manufacturing powerhouse, second only to Detroit, has been largely forgotten, according to Dr. Rebecca Morales, an assistant professor in the urban planning program of the UCLA Graduate School of Architecture and Urban Planning.

But, she said, the successes and failures of the past may chart the track to the geographic future of design.

While researching the contributions of workers to the industrial growth of Southern California, Morales became fascinated with the history — and future — of the local auto industry and has completed a monograph on the subject.

Angelenos' love affair with the car began long before there were freeways, or even worthy surface roads, Morales said. By 1903, with 250 cars in use, the city was hailed as the most important automobile center west of Chicago.

From the beginning, Morales said, amateur and professional mechanics applied their ingenuity to handcrafting specialty and racing cars, customizing and coachwork — "fields in which Los Angeles remains supreme."

Morales called that "craft orientation" one of the two main stems of the industry's evolution in Los Angeles.

The second stem was "Fordism," the mass production of cars through the use of moving assembly lines, which started locally in 1913 when Henry Ford opened a plant in downtown Los Angeles.

Both specialized and mass production grew rapidly in the 1920s, and even expanded during the depression.

Between 1929 and 1936, Willys-Overland, Ford, Chrysler and General Motors opened plants in the Los Angeles-Long Beach area. At the same time, Morales said, Los Angeles evolved into the world center for car racing, and the city's coach designers pioneered "Hollywood styling" and the "California-type chassis."

To meet the demand for cars after World War II, Nash, Studebaker and General Motors set up mass-production facilities in 1947, and the last new plant was opened in 1957 by Ford in Pico Rivera.

During the 1950s, seven major assembly plants turned out 650,000 cars a year, but from that peak the decline was as steep and rapid as the earlier growth.

By 1980, the GM plant in Van Nuys was the sole surviving major assembly plant in California (GM and Toyota have since begun building cars in a joint venture in Fremont), and an industry analyst predicted that American auto and parts manufacturing would soon shift altogether to less-developed countries, where labor was cheap.

Morales believes that the doomsayers are wrong. She said the future of the American auto industry lies in integrating the techniques of craft and mass production and that Los Angeles, drawing on its long experience in both fields, "is in a unique position to shape the course of the industry."

Another harbinger of a better future is the opening during the past decade of design facilities by nine major Japanese and domestic auto makers.

PRODUCTION

Car production up 7%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled production of 168,700 cars last week, 7.48 percent more than the previous week's 156,961 but 2.33 percent below the year-ago week's 172,719.

So far this year, 629,523 cars have been assembled, 16.90 percent below the 757,520 completed last year at this point.

Last week's targeted production was split as follows: General Motors, 52.27 percent; Ford Motor Co., 25.30 percent; Chrysler Motors, 12.33 percent; Honda of America Manufacturing Inc., 4.34 percent; New United Motor Manufacturing Inc., 2.37 percent; Nissan Motor Manufacturing Co., U.S.A., 1.73 percent; Volkswagen of America, 1.19 percent; and American Motors, 0.47 percent.

GM has increased its number of indefinite layoffs by 3,000 to 30,000. The company said the layoffs are a result of previously reported scheduled adjustments at various GM assembly and components plants.

GM's Leed's, Mo., plant resumed output today (Feb. 2). The plant was down last week because of a parts shortage.

Two GM plants are idle this week. The Arlington, Texas, facility is closed for installation of paint equipment and is scheduled to resume output Feb. 16, and the Lakewood, Ga., plant will be down for model changeover until early May.

GM slated Saturday (Jan. 31) overtime at three plants: Lansing, Mich.; Linden, N.J.; and Wilmington, Del.

Ford's Lorain, Ohio, plant was scheduled for Saturday overtime. All Ford car plants are slated for daily overtime this week.

Saturday (Feb. 7) overtime is scheduled for Ford's Dearborn, Mich.; Atlanta, Ga.; and Chicago plants.

Chrysler slated overtime last Saturday at Belvidere, Ill.; Newark, Del.; Sterling Heights, Mich.; and Detroit (Jefferson Avenue).

Daily overtime is scheduled this week at Belvidere, Newark and Sterling Heights.

Trucks hold at 76,000 for week

Domestic truck production was scheduled at 76,712 units last week, slightly below (0.21 percent) the previous week's 76,872 but 6.38 percent more than the year-ago week's 72,113.

General Motors' Baltimore and Detroit plants were slated for overtime Saturday (Jan. 31).

Saturday overtime was scheduled at Ford Motor Co.'s Twin Cities, Minn., and Norfolk, Va., plants. All Ford truck plants are slated for daily overtime this week (Feb. 2).

Three Ford plants are scheduled for overtime next Saturday (Feb. 7). They are Wayne, Mich.; Kansas City, Mo.; and St. Louis.

Chrysler Motors' Warren, Mich., plant is slated for daily overtime this week.

Canadian makers boost output

Last week's scheduled output of 21,400 cars in Canada was 7.30 percent more than the previous week's 19,945 and 3.79 percent more than the year-ago week's 20,619.

So far this year, 75,062 cars have been assembled, 13.66 percent below the 86,935 completed last year at this point.

Truckmakers' targeted output of 16,312 units last week, 11.19 percent more than the prior week's 14,671 but 11.84 percent below the year-ago week's 18,503.

On Feb. 16, General Motors will add a second shift at its van plant in Scarborough, Ontario. About 1,000 workers will be recalled. The second shift was dropped last October.

Output dips slightly for Japan in '86

TOKYO — Japan's production of cars, trucks and buses in 1986 totaled 12,259,817 units, a decline of 0.1 percent from 12,271,095 in 1985.

The Japan Automobile Manufacturers Association said it was the first decline since 1982.

The association attributed last year's dip to a slowdown in exports resulting from the yen's sharp rise against the U.S. dollar. The strong yen has eroded the competitiveness of Japanese cars in overseas markets by forcing automakers to increase prices.

Japanese manufactures last year produced a record 1,322,418 knockdown kits, up 32.1 percent from 1985. JAMA said it reflected increased overseas assembly.

The association reported that production of completely built vehicles dropped 3.2 percent in December to 984,012 units, compared with 1,016,194 units in 1985. December's output included 627,593 cars, 352,897 trucks and 3,522 buses.

Toyota Motor Corp. produced the most vehicles in 1986. Its total was 3,660,167, down 0.1 percent from the previous year's 3,665,622 units.

Nissan Motor Co.'s output amounted to 2,242,995, compared with 2,500,088 the year before — a drop of 10.3 percent.

Honda moved into third place among the auto producers with 1,236,398 units. That was an increase of 10.4 percent over 1985's output of 1,120,311 units.

Mazda Motor Corp. produced 1,195,625 vehicles, up 0.2 percent over the year-before total of 1,193,692.

Mitsubishi Motors Corp. production increased 2.2 percent to 1,177,975, compared with 1,152,777 in 1985. Suzuki Motor Co. produced 872,411 vehicles in 1986, an increase of 11.6 percent above the year-earlier total of 781,901.

Fuji Heavy Industries produced 628,303 units, up 7.5 percent over the year-before total of 584,384. Daihatsu Motor Co. produced 602,519 units in 1986, up 4.1 percent over 578,937 in 1985. Isuzu Motors production was 554,900, a decline of 5.5 percent from 587,015 units in 1985.

Hino Motor Co. produced 55,114 trucks and buses in 1986, a decrease of 20.2 percent from the year-before output of 69,063. Nissan Diesel Motor Co.'s production of trucks and buses totaled 32,703 units, compared with 36,351 the year before, a 10.0 percent decline.

Porsche taps tire makers

STUTTGART, West Germany — The Bridgestone 1 V-rated high-performance tire has been picked by Porsche as the original equipment tire for its 959 model. The tire will be fitted on the first 135 cars of the 250 cars to be produced. The tire is designed to handle speeds of up to 200 mph.

Goodyear's high-performance radial, the Eagle VR, has been approved by Porsche for original equipment on six of its models. The tire, produced by Goodyear in West Germany, will be standard on the 911 Carerra, 911 Turbo, 924S, 928S, 944 and 944 Turbo models.

Dealers voice gripes, views at make meetings

Copyright, 1987, Automotive News

LAS VEGAS, Nev. — Customer rebates and who pays for them, the importance of car quality, computer systems controversies and future product plans were among the key issues discussed in make meetings at the National Automobile Dealers Association annual convention.

While the media were excluded from the actual sessions, Automotive News reporters were able to piece together details of what transpired from dealer and manufacturer sources. Gathering complete details was not always possible because the meetings were closed by NADA, but what follow are the best available accounts of what happened at the major make sessions.

In separate make meetings, Chevrolet and Ford/Lincoln-Mercury dealers overwhelmingly agreed they would prefer $700 customer rebates fully paid by the factories rather than the current $1,000 rebates to which dealers must contribute $300 in addition to the factories' $700.

One Chevy dealer said that when dealers have to contribute $300 toward the rebate, "They've got to almost mislead the customer; they've got to make up that $300 on the trade-in or something of that nature."

Yet, in a private session with GM Chairman Roger B. Smith, dealers representing all five GM makes were said to have favored the $1,000 rebate — so that GM could maintain its competitive position against Ford.

Warranties also were a hot make-meeting topic. Although Chrysler's extended 7-year/70,000-mile drivetrain warranty and 6-year/60,000-mile drivetrain warranties at General Motors and Ford were generally praised, Cadillac dealers expressed concern that such generous offerings narrowed the gap between Cadillac and other GM divisions.

Cadillac General Manager John O. Grettenberger assured Cadillac dealers that their warranties would remain distinctive — and the best.

And, in a related development, there were indications given to Chevrolet dealers that GM would this week broaden its extended warranty coverage from drivetrains to such things as air conditioning and soft trim.

At Chevrolet and Chrysler-Plymouth sessions, quality was a major topic. One Chevy dealer complained that the Chevy Nova was difficult to sell against the Toyota Corolla, even though Nova is a Corolla derivative and is built in a Toyota-managed plant in Fremont, Calif.

"GM and Chevy aren't telling the story," that dealer said. "They've got to tell peo[illegible]

Activities at the 1987 NADA convention ranged from lectures to parties

NADA: *Incentives, megadealers are hot issues; dealers shop for computers, franchises*

By Kathleen Hamilton
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS — The record-breaking 70th convention of the National Automobile Dealers Association found dealers shopping for computers and looking for franchises for low-priced vehicles. The megadealer phenomenon and factory incentives proved this year's hottest topics — for conversation and study sessions.

A preliminary tally of attendance at the Las Vegas gathering showed 11,000 pre-paid registrants — a record — another 4,000 who registered during the convention — a record — and 5,000 more registrants from exhibitors.

Workshop attendance, hotel rooms, the number of exhibitors and exhibit space also hit all-time highs, said Convention Chairman H.E. "Buddy" Derrick Jr., Lexington (Va.) Motor Sales.

As usually happens when auto dealers gather, there was a mood of optimism about sales for

see CONVENTION, page 99

Japanese incentives spreading

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS, Nev. — Subaru of America launched a cash-to-dealer program last week, leaving American Honda and Mazda as the only Japanese marketers not offering car incentives.

Subaru's deal is a flat-rate $500 to $1,200 allowance per car from Feb. 4 to March 10, without qualifiers or volume increases, President Tom Gibson said.

The program, jointly funded by Subaru of America and independent distributors, is aimed at reducing growing inventories and clearing out about 7,000 remaining 1986 models.

Dealers get $1,200 for each 1986 XT coupe, GL-10 or any turbocharged car and $500 for all other 1986 models sold during the 40-day period. The offer is $1,000 for 1987 front-wheel-drive GL-10s and front-drive GL turbos and $500 for all other 1987 front-drive GLs except for Justy, Brat and hatchback models.

The program was revealed as Subaru inventories grew from a 50-day supply in December to 75 days at the end of January.

The Subaru program is similar to those of other Japan-based marketers — not offering deals directly to consumers, but only to dealers. The only recent direct incentive on cars was an American Isuzu low-interest-rate offer that ended Dec. 31.

Cash-to-dealer incentives are currently in force at Nissan, Toyota and Mitsubishi.

Nissan is offering $300 to $600 on each Sentra, Stanza and Maxima sold between Jan. 7 and April 2, depending on volume. Toyota dealers get $200 to $1,000, depending on volume, on Corolla FX-16s sold in the first quarter. Mitsubishi dealers receive between $400 and $1,000 for each car or truck sold through March 1, depending on overall volume, with a $500 bonus on each Galant.

Direct consumer incentives have been commonplace for several years on Japanese-made trucks in the highly competitive small truck segment, but major Japanese marketers have been reluctant to break the direct incentive barrier on cars. But many import dealers said they believe widespread import car incentives will be inevitable, perhaps coming as early as March, as inventories build.

Ford ups truck warranty as Chicago show opens

By Dave Zoia
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — Ford Motor Co. fired the latest shot in the war over new-vehicle warranties, extending its 6-year/60,000-mile powertrain and 6-year/100,000-mile rust-through protection to its 1987 model light trucks.

Ford made its announcement prior to the opening of the 79th annual Chicago Auto Show.

Also at the auto show, American Motors President Joseph E. Cappy said the automaker expects to sell

1988 Renault Premier: designed by Italy's Giugiaro and built in Ontario

"We'll sell that many and more — easily," Cappy said in a speech prepared for the Premier's unveiling at the show. "Our dealers are ready on cloud nine drooling [illegible]er this car, even though they won't be selling it until the fall."

Cappy said sales of the higher-profit-margin Premier, the imported Medallion coming this spring, the Alpine sports car and Premier-based coupe would spark a financial recovery at AMC.

The Premier will be assembled at AMC's new plant in Bramalea, Ont., Canada.

In addition to new product unveilings at the Chicago Auto Show, warranties were the subject of much discussion.

The new Ford warranty program, which covers 1987-model Econoline vans, Club Wagons, F-Series pickups, Bronco, Bronco II, Ranger and Aerostar — came in response to the recently announced 7-year/70,000-mile Chrysler Motors powertrain warranty for both cars and trucks.

B-O-C shuts dining room for execs

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

WARREN, Mich. — In an attempt to break down barriers between employees, General Motors' Buick-Oldsmobile-Cadillac Group has shut down an executive dining room at its GM Tech Center headquarters.

The Feb. 1 closing was a "symbolic" gesture to show B-O-C's desire to open up communication channels among workers, said spokesman Stan Hall.

"The whole idea is that we are trying to create a more participative management style," he said. "One of the ways to do this is to break down the barriers between various levels of people."

Approximately 40 executives had access to the dining room, Hall said. They will now use the main cafeteria for in-house meals. In that cafeteria, which sits beneath a four-story atrium adjacent to the old dining room, employees stand in line for their meals and pay for them on-site.

The same kitchen served both eating areas, said Hall. But the executives had meals delivered to their tables, and a $50 monthly dining-room fee was taken from their paychecks.

GM's cafeteria operations are partially subsidized by the company, Hall said.

The dual-room setup was left over from the days when the old GM Assembly Division occupied the building, Hall said. The idea was to give managers a place to discuss business privately.

B-O-C moved into the space after GM's corporate realignment in 1984.

The joint dining plan surfaced after the formation of B-O-C in 1984, when a transition team began looking at ways to change the group's corporate culture, Hall said.

As part of that effort, B-O-C also developed joint strategy teams to encourage communication between management and the UAW. Typically, representatives from B-O-C and UAW trades groups meet monthly. And every quarter their ideas are brought before top B-O-C and union officials.

GM's Chevrolet-Pontiac-Canada Group, which has a similar cafeteria setup in its Tech Center headquarters, will continue to operate its executive dining room, a spokeswoman said. At some C-P-C operations, all employees share the same dining area, she said.

Production to begin in 1989

TARRYTOWN

GM's oldest plant was built in 1900, but its modern contract won minivan

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

General Motors' North Tarrytown, N.Y., plant has won production of the new plastic-body all-purpose minivan.

GM said it will invest $250 million in the facility, whose workers recently ratified a local contract that eliminates traditional job classifications in favor of the team method of production. (Automotive News, Jan. 19).

Production of the minivan is scheduled to begin in February 1989. It will be marketed by Chevrolet and Pontiac.

Tarrytown is GM's oldest plant. Walker Steamer automobiles were built in 1900 at the facility, which is located 20 miles north of New York City. The plant was sold to Maxwell-Briscoe in 1903. W.C. Durant bought it in 1914 and began Chevrolet production there in 1915.

GM pilot-tested its Quality of Work Life program in Tarrytown in 1973. "That was the start," said John Clark, shop chairman of the bargaining committee of UAW Local 664.

"Back then, we realized what was confronting us. QWL means mutual trust and respect — common sense, really," he said. "We were an old plant, a militant plant. We filed hundreds of grievances. We were cutting up and carrying on.

"We realized that was no way to run a business," Clark said.

GM has told workers at Tarrytown it is committing $80 million for land improvement, construction of a plant addition, tooling, machinery and equipment. In 1985, GM announced a $170 million investment to construct a new paint shop at the plant.

GM President F. James McDonald made the announcement that Tarrytown had been selected to produce the minivan.

Apparently countering recent criticism by UAW President Owen Bieber before a Senate Labor subcommittee (Automotive News, Feb. 2), McDonald said, "I'm proud to say that General Motors is investing more into America's industrial future than anyone else in the auto industry, if not all of American industry."

Bieber told the subcommittee that — rather than close plants — automakers should "renew their commitment to U.S. production and concentrate their resources on improving U.S. manufacturing capabilities."

McDonald told the Tarrytown workforce, "In the first six years of this decade, GM has invested $41.5 billion to increase the profitability and productivity of its American plants and facilities." He said the investment in the Tarrytown plant is a major step in GM's commitment to revitalize this country's industrial base and maintain American jobs.

McDonald said key factors in the decision to build the minivan at Tarrytown were the new labor agreement, commitment of the 4,500 employees to achieve world-class excellence and a close working relationship with state and local governments.

Clark said that the state has committed training funds as well as a training facility and will make infrastructure improvements such as raising railroad bridges and widening roads.

The state also has said it will encourage a supplier to locate a facility 40 miles north of the Tarrytown plant to produce plastic panels.

Clark said production of the new front-wheel-drive minivan is slated to begin in February 1989, with 90,000 units scheduled for the first year. Full production is planned at 200,000 per year — the same volume as for the Pontiac 6000 and Buick Century, which are now built at the plant.

McDonald said the new van will be marketed by Chevrolet and Pontiac. Like the Pontiac Fiero, it will have composite exterior body panels attached to a spa

AMC may produce Jeep at Bramalea

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

American Motors is considering building future Jeep models in its new Bramalea, Ontario, plant or an entirely new plant if negotiations with workers at its Kenosha, Wis., fail, according to a union leader.

Rudy Kuzel, president of UAW Local 72, which represents Kenosha workers, said AMC told the union that the new Jeep ZJ could fill the excess capacity in its $400 million Bramalea facility or could be placed in a completely new plant.

The Jeep ZJ — the next generation of Jeep Cherokee, Wagoneer and Comanche models — is being considered for the Kenosha plant, but AMC said it must have a new lower-cost labor contract there.

AMC officials would not comment on the negotiations or on whether they are considering a new plant for the ZJ.

Meanwhile, AMC narrowly averted a strike at its Toledo, Ohio, Jeep plant by settling long-standing health and safety grievances — and, in the process, may have reopened the door to another alternative for future Jeep production.

UAW Local 12 Committee Chairman Dan Twiss said the Feb. 3 settlement ending three days of negotiations could lead to further talks between AMC and Jeep workers on a new contract to bring a new Jeep model into the Ohio plant.

The Toledo Jeep plant builds all of AMC's Jeep models except one and is currently being considered to produce a new Jeep pickup. But first, AMC wants a new, lower-cost labor contract for the plant.

One major obstacle to placing future production in the Toledo plant is a so-called "wheel tax" formula, which requires AMC to repay earlier concessions by workers on the basis of how many units are built, rather than as profit-sharing.

AMC agreed to eliminate several health and safety problems in the Toledo plant. AMC also agreed not to outsource work to non-union members for six months in such fields as truck-fleet and body shop subassembly for six months.

Kuzel said AMC revealed its alternatives for Jeep production during contract discussions with Kenosha union leaders. The automaker wants to nail down a lower-cost labor agreement as part of a larger renovation project that would bring new products into the plant. Without the renovation, AMC said it will close the assembly plant in 1989.

Last December, AMC President Joseph Cappy said he company had an "alternative site for Jeep production," although he did not specify where.

According to Kuzel, AMC representatives said that the ZJ could be built at Bramalea alongside the new Renault Premier, an intermediate car scheduled to debut in late 1987. The plant now has capacity to build 200,000 vehicles a year, however an AMC planning document shows that Premier production will hit a maximum of 162,000 annually during the next seven years.

AMC also faces financial penalties if Bramalea's total output falls below 158,000 vehicles a year. So far, AMC plans to exceed that volume only once in the next seven years with 162,000 Premiers in the 1989 calendar year.

Kuzel said company officials hinted that the company also was considering proposals from several states for a new assembly plant. At last count, AMC was looking at proposals from five states.

Company officials also mentioned that the province of Quebec was willing to work with AMC on locating a new assembly plant in that area, Kuzel said. However, a top Quebec economic development official said the province is not currently negotiating with AMC on a new plant.

A new plant could be the death knell for both Kenosha and Toledo, where heated labor talks have been going on for months.

In January, AMC offered to renovate the Kenosha plant to produce a new line of Jeeps and Chrysler Motors subcompacts if the union would negotiate a new contract.

AMC said it would need $195 million in loan guarantees from the state of Wisconsin and a production contract for Chrysler's Omni and Horizon cars.

But negotiations in Wisconsin between AMC and the union have not proven successful; both sides rejected contract proposals two weeks ago.

Last week, Wisconsin Gov. Tommy Thompson gave AMC a preliminary report on what the state was willing to provide AMC in aid for the Kenosha project. The state report must be voted on by AMC's board of directors and the Wisconsin legislature.

Porsche, Isuzu search for extra brands to sell in U.S.

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS, Nev. — American Isuzu Motors is leaning toward a $30,000-$35,000 luxury European car to sell as Isuzu's U.S. flagship by 1988 instead of finding a low-wage country to supply entry-level vehicles.

Meanwhile, Porsche Cars North America has narrowed its search for a foreign manufacturer that would sell its own brand of vehicles through U.S. Porsche dealers to "five or six countries," President John Cook said.

American Isuzu is currently talking to manufacturers in five countries — one in eastern Europe, three in western Europe and one in Asia — about both low- and high-end vehicles, said Senior Vice President Jack Reilly.

"The products run the gamut from entry-level to mid-$30,000 luxury stuff and are available in either 1988 or 1989," he said during the National Automobile Dealers Association convention.

Reilly is leaning toward either a luxury sedan or luxury performance car because he expects an entry-level glut. He is trying to swing dealers to his perspective, although he said they were "enthusiastic" about importing a non-Japanese model to bolster shipments from parent Isuzu Motors Corp. and future U.S.-assembled trucks from the Isuzu-Subaru joint-venture plant in Indiana.

About 40 percent, most big dealers, favor the high-end approach while most smaller Isuzu dealers, typically duals with larger-volume, upscale domestic or import line, want a traffic-building, inexpensive car, he said.

An upscale model is "one you can make a styling distinction on, and there is less fear of intense competition and bigger margins," he added. Even Isuzu's small dealer network could sell 5,000 to 7,000 units annually, and an image car could improve Isuzu's low public awareness, he said. Currently, only 2.7 percent of all new-car buyers consider Isuzu and only 3 percent remember Isuzu without prompting, despite a national advertising budget of $42 million, internal research shows.

Both Porsche Cars North America and American Isuzu are searching for foreign manufacturers of vehicles not currently sold here. Both are offering help in U.S. federal certification and engineering from the parent companies, Japan's Isuzu Motors and West Germany's Porsche AG.

Isuzu wants to put its own label on its imports. Porsche is looking for 20,000 to 70,000 units annually that would be sold under the other company's label by some or all of Porsche's 322 U.S. dealers.

The pool that both companies are fishing has grown steadily smaller as more overseas manufacturers affiliate with U.S. automakers or set up their own dealer networks.

RV shipments climb 5% for November, 11 months

Wholesale shipments of recreational vehicles continued to rebound in November.

The Recreational Vehicle Industry Association reported 24,800 shipments, up 5.5 percent from 23,500 deliveries in November 1985.

For the first 11 months of 1986, the industry shipped 352,900 RVs, up 5.0 percent from 336,100 shipped during the same period in 1985.

While the van conversion segment was well ahead of its 1985 year-to-date performance, it was the only category to report lower November shipments than a year earlier.

In November 1986, van converters shipped 11,200 units, 5.1 percent fewer than a year earlier.

For the January-November period, they shipped 169,800 units, 11.8 percent more than for the same period in 1985.

Deliveries of towable RVs and motor homes have been on a strong rebound, after being down earlier in the year.

Manufacturers shipped 8,500 towables in November, 19.7 percent more than in November 1985. During the first 11 months of the year, they shipped 120,700 towables, a 1.5 percent increase over the same period in 1985.

Similarly, motor home shipments of 5,100 in November were up 10.9 percent from a year earlier. For the first 11 months, shipments totaled 62,400 and were off 4.4 percent from the same period in 1985.

The Index of Consumer Sentiment fell slightly to 91.4 in November but still remains quite high, the RVIA reported.

The Index was compiled by the University of Michigan's Survey Research Center. It polled consumers' feelings about the outlook for the U.S. economy in 1987.

Magnum creates a Ford 'Suburban'
Magnum Motor Coach, Sturgis, Mich., created this "Suburban-type" vehicle from Ford's one-ton, F-350 heavy-duty Crew Cab chassis to compete against popular Chevrolet/GMC Suburbans. It can tow 12,500 pounds and seat five to eight people. Ford doesn't offer anything comparable.

Winnebago plans low-priced RV

Chevy chassis, single wheels and a price under $20,000

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

ATLANTA — Winnebago Industries, of Forest City, Iowa, is developing a new lower-priced Class C motor home and is pushing sales of its small motor homes in an effort to reach first-time buyers.

It also has begun discussions with a number of regional van customizers as part of an effort to expand its customizing operations into other areas of the country, according to a company official.

Bryan A. Hays, vice president sales/marketing for Winnebago Industries, said that the motor home market has been maturing.

The industry is still selling the same number of vehicles every year but in a different mix.

Ten years ago, it was an infant industry. Everyone was a first-time buyer. They all bought new RVs, Hays pointed out.

Now, it's a mature industry, selling 1.2 used vehicles for every new one.

Ten years ago entry-level buyers were purchasing small motor homes because of price. Today, they're buying used vehicles, Hays said.

"Price has taken a lot of new-vehicle buyers out of the market," he added. "If there's any growth in the market (in 1987), it will be in lower-priced new vehicles and used RVs."

For the entry-level buyer, Winnebago is developing a new Class C model with single wheels, built on a Chevrolet chassis. The company hopes to retail it for less than $20,000.

It will be positioned as Winnebago's entry-level model against van campers typically costing $18,000 to $20,000.

The average price of a motor home is about $40,000, Hays said, calling it "a lot of money, particularly for a discretionary item." Typically, buyers are 55 and older.

Winnebago also is trying to capture a younger buyers with its small Lasharo and Phaser models.

Hays said the company's biggest fixed cost is the chassis, which is a price it can't control. But the escalating competition among Ford, John Deere and Chevrolet has reduced chassis prices and has been a benefit to the industry, he added.

The new chassis from Asia Smith, however, doesn't have enough gross vehicle weight strength to satisfy Winnebago's needs, Hays said.

He said insufficient GVW is a problem inherent in all of today's chassis.

"People want more bells and whistles (equipment) on their vehicles. That adds to the vehicle's weight and reduces its payload capacity," Hays pointed out.

In that respect, Deere's chassis, which has almost 1,000 pounds more GVW than those of major competitors, is well positioned in the market, Hays added.

Winnebago is also still interested in expanding its van conversion operation.

Its goal is to increase its current volume of 600 to 700 units a year to 1,200 to 1,400 units by early 1988.

First-time buyers happy, RVIA poll finds

RESTON, Va. — The average first-time recreational vehicle buyer is married, 49 years old, owns his own home and has a household income of just under $40,000.

Those are findings of a study conducted by Burston-Marsteller for the Recreational Vehicle Industry Association.

First-time buyers purchased vehicles to camp and travel, and they are typically happy with what they've bought, the study found.

The research findings are in a report entitled "Understanding First-Time Recreation Vehicle Buyers," written by David Michaelson, associate director of research for Burston-Marsteller.

The first-time buyer is more likely to own his or her own home, be married and have a smaller family than general members of the U.S. population, according to the study. He or she is also older, has a higher income and better education than most Americans.

The survey said the average age of first-time motor home owners is 53.7 years, while buyers of folding camping trailers are typically the youngest first-time RV buyers, with an average age of 41.5 years.

Owners of new motor homes have the highest average annual income of the first-time RV buyers: $45,300. Travel-trailer owners have the lowest incomes, averaging $36,000.

Overall, 58 percent of first-time owners purchased a used product, particularly the older, retired buyers.

Owners of new RVs who started with a used unit generally do not upgrade the class of RV when they later buy a new model. The overwhelming majority purchase the same type of unit again.

Some 99 percent of first-time buyers of RVs are enthusiastic about the lifestyle.

An analysis of their purchase decisions shows that 33 percent typically go to a dealer to get information about recreational vehicles; 25 percent go to a friend or neighbor. Only 12 percent go to shows to learn about RV products, and just 11 percent rent prior to buying.

The final purchase decision is influenced by two key factors: floor plans, which are particularly important to motor home and travel trailer buyers; and built-in features, which are particularly important to travel trailer and folding camping trailer buyers.

Generally, floor plans were most important to 25 percent of respondents; built-in features to 23 percent of respondents; construction to 10 percent of respondents; overall size to 9 percent of respondents and cost of purchase to only 6 percent of respondents.

Regardless of vehicle type, the decision to buy is typically made by both husband and wife.

In giving their reasons for making the purchase, 36 percent of the buyers said camping; 27 percent said travel. Less frequently mentioned were enjoyment of the outdoors, economy, convenience, benefit to children and retirement.

Some 95 percent of first-time buyers said they were "very" or "somewhat" satisfied with their purchase.

Typically, those who said they were disappointed cited structural or mechanical defects in the vehicle, rather than disenchantment with the lifestyle.

Overall, 40 percent of first-time buyers experienced some problems with buying or operating their RV.

Some 65 percent of buyers said convenience was the most significant benefit of owning an RV. In most cases, that means being able to go where they want and when they want with all the comforts of home.

Van converter, dealer taking warranty dispute to court

RV TRENDS

JOSEPH BOHN

It's always unfortunate when a recreational vehicle company gets into a dispute with one of its dealers because often everyone, including the customer, loses out.

Don Mallon Chevrolet, of Norwich, Conn., and Jet Force Van Conversions, of Nappanee, Ind., are going into litigation over a warranty dispute.

Donald R. Mallon, dealership president, notified 36 of his Jet Force customers that he had stopped performing "further warranty work on (or replacement of) any conversion materials or components which may be required and should be covered under" Jet Force's warranty."

Mallon informed customers that over a several-month period his dealership had "done considerable warranty work, replaced TVs, radios and other costly Jet Force components" without reimbursement from Jet Force and would no longer be doing such warranty work.

Arthur Bishop, president of Jet Force, said that some of Mallon's claims were for vehicles that were out of warranty, were for things not covered or were simply exaggerated in their reimbursement fees.

Jet Force has 213 dealers, customized about 1,400 vans last year and adheres to the Recreational Vehicle Industry Association's standards for van conversions.

Bishop said he was mainly concerned about customers who had bought his vans from Mallon.

He said that Mallon had not given him their names. And unless they had filled out and sent in warranty cards to him, he had no way of knowing who they were.

Bishop said that any customer who contacted him or any customer that he could track down would have his warranty work taken care of by another of the customizer's nearby dealers, Cardinal Buick in Manchester, Conn.

Bishop said he felt that any differences between him and Mallon should have been settled privately and should not have involved the customers.

He said he felt that by airing them publicly, Mallon had hurt himself as much as Jet Air because customers wouldn't be very likely to buy another vehicle from Mallon.

Both parties claimed they tried to discuss the matter.

Mallon claimed that Jet Force ignored his phone calls and letters. Bishop claimed that Mallon simply "screamed and yelled on the phone and became so irate that he hung up on me."

Regardless of who turns out to be right or wrong, the dispute will hurt both parties and, in a general way, the larger industry of which they are a part.

Customers typically don't care whose fault it is. All they really care about is the inconvenience an incident like this causes them or the money its costs them. They end up with a discolored view of dealers, customizers and customized vans generally.

Finally, a system you control, not one that controls you!

If you're tired of gambling with "no name" hardware, inflexible software and unending monthly fees, let's talk.

For years, **Advanced Computer Systems** has been developing software tailored to automotive dealerships for other computer vendors.

Now we're selling the software directly to dealers, offering the systems, service and support they have been asking for.

Carl E. Holland, President
Advanced Computer Systems

CONTROL - We'll teach you to control and maintain your system. The full dealer package includes: F&I, management information; accounting; service dispatch, invoicing and merchandising; and parts inventory and invoicing. Buy it only once for one or one hundred dealerships.

IBM HARDWARE - Buy your System 36 from us or from IBM. IBM products are "the" name in computer systems. Combined with our name it's a rock solid investment!

ACS software - The dealers using our software love it. And so do our competitors. Toyota®, Dyatron®, and EDS® use it too.

SUPPORT - From in-store installation and training to follow-up instruction on audio tape, we are at your service when you need us. Of course we offer customer support at **800-472-7044.**

January U.S. car sales tumble

Stormy East Coast weather, December sales boom blamed

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

"I couldn't believe it, but they were here whenever we were opened."

That was one car salesman's reaction to fortitude demonstrated by customers during late January snowstorms on the East Coast.

However, such doggedness as that reported by Sales Manager Kevin Askew, of Brown's Nissan in Fairfax, Va., did not keep domestic new-car sales from going through the bottom last month. They fell 32.74 percent below the year-earlier total.

It was the worst year-to-year drop since May 1980, when sales plunged 37.46 percent below the total for May 1979.

Sales last month of cars built in the United States totaled 427,678, dramatically below the record 694,602 delivered in January 1965, and substantially under the 635,904 cars sold in January, 1986.

Import-car sales also suffered in January, falling 16.58 percent to 197,941 units from 237,288 the year before.

Where the market was, Jan. 1987

	Total Sales	Pct. of Total
SUBCOMPACT	88,533	14.15%
COMPACT	88,037	14.07%
INTERMEDIATE	154,095	24.63%
STANDARD	50,992	8.15%
LUXURY	46,021	7.36%
IMPORT	197,941	31.64%
TOTAL	625,619	100.00%

Combined sales of domestic and imported cars totaled 625,619 units, down 25.27 percent from the 837,192 sold in January 1986.

Snow, ice and stuck traffic in a series of January storms slowed or interrupted business for Eastern dealers from the pines to the palms.

Brown's Nissan and other points in the Mid-Atlantic states, for example, were shut completely for some four days or more as the vicious weather closed in and stayed.

The National Weather Service said no part of the country was colder than normal last month, but it called the weather on the East Coast and in the Southeast "extremely stormy."

There were other factors figuring in the sales story. For example, Claude N. Moore, vice president in charge of the General Motors Customer Sales and Service Staff, said:

"While sales in January reflected the aftermath of the sales tax prebuying in December, we are optimistic about sales prospects for February and March.

"The variety of attractive customer incentives now offered by GM divisions, coupled with the longer-term affirmation of our product quality demonstrated by GM's greatly improved, 6-year/60,000-mile passenger-car warranty, underscore our expectations for improved sales."

Chrysler Motors' Tom Pappert, group vice president — sales, pointed to incentives already in the market. "We announced incentives Jan. 27 and there was an immediate response in weekend sales," he said. "We're looking forward to a stronger February."

Louis E. Lataif, vice president, sales operations at Ford North American Automotive operations, pointed to 1986 incentives in discussing a decline this year.

"Last year, we offered significant incentives during the full month of January," he said. "This year, tax laws pulled many January sales into December and our new incentives were in effect on the last few days of the month. Considering those circumstances, we did not expect sales to match those of last year," Lataif said.

The Ford officer called the year-to-year sales decline unavoidable but was able to point to some good news that developed over the course of the month.

"We saw a steady increase in sales through January. In the first 10 days of the month, we were selling 3,042 domestic cars a day and in the final 10-day period, sales came in at 5,010 a day. We expected some increase during the month, but that 65-percent increase was unusual," Lataif said.

In spite of that improvement noted by the Ford executive,sales of U.S.-built cars plunged in the final 10-day selling period of January. They were 25.80 percent below year-earlier levels, according to Automotive News analysis of manufacturers' reports.

Only Honda and Nissan reported year-to-year gains.

Honda sales were up 89.76 percent, largely reflecting improved availability of product. The company in July started up a second assembly line at its plant in Marysville, O. The added facilities are utilized in the assembly of the little Honda Civic.Nissan had a gain of 25.59 percent in the 10 days.

American Motors dealers sold 75.64 percent fewer cars in January than they did a year before. Volkswagen had a 57.17 percent dip in sales and General Motors had a fall of 34.58 percent. Chrysler reporteda decline of 27.14 percent.Ford Motor Co. had a decrease of 16.09 percent in the closing 10-day reporting period of January.

Toyota reported sales of 946 units in the 10-day period with no year-earlier figure for comparison purposes.

There were 10 selling days in the final period.

Auto production highest of year

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto production during January totaled 639,223, up 9.07 percent over December's 586,025 but down 15.68 percent from the year-ago month's 758,107.

Last week's scheduled auto output was the highest week so far this year.

Automakers' targeted production of 175,421 was slightly higher (0.87 percent) than the previous week's 173,911 and 0.86 percent more than the year-ago week's 173,929.

So far this year, 810,155 cars have been assembled, 13.19 percent below the 933,285.

Companies split last week's estimated production as follows: General Motors, 51.67 percent; Ford Motor Co., 25.22 percent; Chrysler Motors, 13.40 percent; Honda of America Manufacturing Inc., 4.17 percent; New United Motor Manufacturing Inc., 2.28 percent; Nissan Motor Manufacturing Co., U.S.A., 1.66 percent; Volkswagen of America, 1.14 percent; and American Motors, 0.46 percent.

Last week (Feb. 2), AMC cut production of its Renault Alliance and GTA models, built at its Kenosha, Wis., plant, from 300 a day to 160 a day.

The cutback is a result of sluggish sales and puts 500 workers on layoff until later this month when production of Chrysler's large rear-wheel-drive cars begin at the Kenosha facility.

GM scheduled Saturday (Feb. 7) overtime at three plants: Lansing, Mich.; Linden, N.J.; and Wilmington, Del.

Ford slated Saturday overtime at its Chicago and Dearborn, Mich., plants.

All Ford plants except Wixom, Mich., are scheduled for daily overtime this week (Feb. 9).

Saturday overtime was slated at Chrysler's Belvidere, Ill.; Newark, Del.; and Sterling Heights, Mich. Those plants are scheduled for daily overtime this week.

Truck output edges ahead of '86; year-to-date count is 384,848

This year's domestic truck production has inched past the total at this time in 1986.

So far this year, 384,848 trucks have been assembled, slightly higher (0.21 percent) than the 384,057 completed last year at this time.

Last week's targeted output of 78,015 was 1.16 percent more than the previous week's 77,117 and 8.38 percent more than the year-ago week's 71,983.

Truck production during January totaled 311,736. It was 32.78 percent more than December's 234,774 but 0.19 percent below the year-ago month's 312,358.

General Motors scheduled Saturday (Feb. 7) overtime at its Baltimore plant.

Ford Motor Co. slated Saturday overtime at its Wayne, Mich., and St. Louis truck plants.

All Ford truck plants are scheduled for daily overtime this week (Feb. 9).

Daily overtime is slated this week for Chrysler Motors' Warren, Mich., plant.

Auto production in Canada dips

Canadian auto production for January totaled 74,603, which was 10 percent below December's 82,894 and 14.45 percent below the 87,204 assembled in January 1986.

Last week, automakers pegged production at 21,450 cars, 2.43 percent more than the previous week's 20,941 and 7.17 percent more than the year-ago week's 20,014.

So far this year, 96,053 cars have been built, 11.61 percent below the 108,664 completed last year at this point.

Truck output of 62,277 units in January was 32.66 percent more than December's 46,943 but was 22.41 percent below last January's 80,269.

Truckmakers' scheduled production of 17,637 units last week was 12.72 percent more than the previous week's 15,647 but 6.74 percent below the year-ago week's 18,912.

For the year to date, 79,920 trucks have been assembled, 20.86 percent below the 100,986 built last year at this time.

Fair trade bill drafted in Senate

By Helen Kahn and Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTERS

WASHINGTON — Lloyd Bentsen, D-Texas, and chairman of the Senate Finance Committee, has drafted a bill calling for strict enforcement of current trade laws and incentives to encourage American companies to be competitive.

At a press conference last Thursday to introduce the bill, some 60 senators joined as co-sponsors, more than half of them Republicans.

Bentsen's bill will not include a provision requiring import surcharges on products from countries with large trade surpluses, which would have meant higher prices for cars shipped from Japan and West Germany.

The bill does not pinpoint any country. Neither does it deal with particular industries, other than a special section encouraging agricultural exports.

Bentsen's bill renews presidential authority to negotiate trade agreements, though requiring consultation with Congress.

The bill would require tough responses to subsidies, dumping, and other market-distorting practices. Countries consistently engaged in such actions would receive special attention.

The bill also urges the President to negotiate with countries that peg their currencies to the dollar, such as Korea and Taiwan, to ensure they regularly adjust exchange rates.

Bentsen suggests, instead of protecting import-threatened industries and their workers, to encourage competition. Instead of raising protective tariffs or paying trade adjustment assistance to dislocated workers, industries should have to show an increase in productivity to qualify for import relief. Workers would have to accept retraining before getting cash assistance.

Bentsen spells out details of the worker relief program including length of time and maximum ceiling for retraining. He recommends a trust fund to pay for it, through an across-the-board import duty of not more than 1 percent.

Bentsen said he hoped to have the comprehensive bill to the Senate by July. House leadership promised to get it to the House floor by mid-April, even though it will be referred to seven House committees.

Selling rate rises to pare big stockpile

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

A steady stream of cars rolled out of U.S. assembly plants in January while retail deliveries remained lackluster. One result was a hefty increase in the number of cars in the pipeline between factory and consumer.

As of Feb. 1, there were 1,734,299 domestic cars in dealer stocks and in transit, a 105-day supply at the January selling rate. The figures were 1,506,557 and 58 days on Jan. 1.

But the situation is not as bad as those numbers indicate. The January selling rate was abnormally low because of the bad weather in the East and a letdown following a December surge of buying to take advantage of the sales-tax deduction.

January domestic-car sales of 427,678 were the lowest for any month since January 1982.

The selling rate improved as January moved along — improved warranties and equipment packages were added — and the improvement continued in the first 10 days of February. That means that the unwieldly stock is being whittled away both in terms of days's supply and the over-all total.

Here are the daily selling rates for the first four periods of 1987:

Jan. 1-10	13,467
Jan. 11-20	15,722
Jan. 21-31	19,417
Feb. 1-10	21,267

In the first 10 days of February, sales of domestic cars dipped from 1986 levels to 170,134 units, down 1.87 percent from 172,372 a year earlier and down even from the 194,169 sold in the last 10 days of January. But there were eight selling days in the February period and 10 in the final span of January. So, although the overall total was down, the daily selling rate increased.

During February's initial sales period, General Motors dealers delivered 90,652 units, off 9.00 percent from 99,621 the year before. Ford Motor Co. dealers sold 46,395 units, up 8.22 percent, from 42,870, and Chrysler Motors' sales were 21,744, off 1.66 percent from 22,113 a year earlier.

Honda sales in the period totaled 7,539, up 118.33 percent, from 3,453 in the first 10 days of February last year. Nissan reported a climb of 39.47 percent to 1,908 units from 1,368.

Volkswagen's unit sales fell 37.75 percent to 714 from 1,147 while American Motors declined 52.77 percent to 850 units from the 1,800 sold a year earlier. Toyota

Chrysler ponders Mitsubishi role

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors' plunge into brand management for its domestic offspring has created a dilemma for its Japanese stepchild — the imports from Mitsubishi.

Chrysler is debating whether its Japanese imports should be folded into the domestic brand organization or remain a distinct operation. Discussions also have included examination of merchandising the Mitsubishi imports as a separate franchise.

In 1986, Chrysler Motors reorganized its marketing and product development groups to enhance individual identities for Chrysler, Plymouth and Dodge. The company links Dodge with performance, Plymouth with value and Chrysler with luxury.

"One debate that is going on is to what extent is it important, desirable or necessary to fold the management of the Mitsubishi products into the brand organization so that the vehicles imported for Plymouth and imported for Dodge are consistent with the rest of the franchise," said Bernard I. Robertson, Dodge general product manager.

"This would include both the development of the product itself, its specifications and its distribution.

"Since we created brand management, the brands such as Dodge may want and need control over everything that's sold through a Dodge store," said Robertson, who is responsible for advance product planning, programs and business management for all Dodge car lines.

He was interviewed during a recent press preview of the 1987 Dodge Daytona in Point Clear, Ala.

"How do you deal with managing a product array and an image-development process where somebody

COMPUTERS

Megadealer trend fuels need for data systems

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

The prospective car buyer sits before a computer in the auto dealership. With the touch of a finger, he assembles the image of the car of his dreams on the computer screen — the exact model, engine, interior-exterior colors and optional equipment.

Another touch of a finger and he takes a full-motion video highway "test drive" — including simulation of such features as the car's intermittent windshield wipers and rear-window defogger.

That's not the sales tool of tomorrow. It's in some dealerships today.

It's part of a vast wave of computer technologies propelled by changes in the way cars are marketed in the United States. Consider this:

Domestic dealer total declines to 20,405; drop is 268 for year

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

Again in 1986, the number of the dealerships handling domestic makes of passenger cars took a tumble.

The annual Automotive News census found 20,405 domestic-car outlets on Jan. 1, down 268 from 20,673 doing business a year earlier. The loss was higher than in 1985, when 229 dealerships faded away.

Those declines followed two "up" years for the industry. The dealer total climbed slightly in 1983 and 1984, but those were the only advances during the last 30 years.

Chrysler Motors was the best performer in 1986 as it increased its dealer total for the fourth consecutive year. The company posted a gain of 20 outlets last year. Volkswagen also was on the plus side with a gain of one.

Sudden acceleration puts NHTSA to 15-year test

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Recent publicity on the Audi 5000 series has thrust "sudden acceleration" into the limelight.

But the problem is not new. NHTSA has been investigating similar cases for almost 15 years. It has opened and closed nearly 50 cases during that time.

What happens when NHTSA believes some random incidents may be related?

When the agency receives any type of complaint, its procedure is to open what it calls a PE, or preliminary evaluation. If it finds reason to, the next step is an engineering evaluation (EA). The next designation is C, or case. It is at this stage that NHTSA issues notifications to the media.

If NHTSA believes it has found a "safety-related defect" — a term that exists in the language of the 1966 vehicle safety law — it calls a public hearing at which the manufacturer, NHTSA and any other interested party may testify.

If the findings reveal such a defect, NHTSA issues a recall order to the manufacturer. If the manufacturer refuses, NHTSA asks the Justice Department to enforce the recall by filing a civil suit in U.S. District Court in the District of Columbia. There is an eight-year statute of limitations for vehicles.

At any point during this procedure, a manufacturer may announce a voluntary recall.

NHTSA looks at four general kinds of "sudden acceleration" as potential safety-related recalls. Examination of the organization's defect docket, which lists the records of closed investigations, reveals that its concerns center on the following:

- Full throttle acceleration happens when shifting out of park or neutral and application of the brakes has no effect. The engine receives too much combustible fuel and there has to be brake failure, not just the loss of the brakes'

Some 35,000 engineers are expected to attend what SAE calls the largest annual meeting of its type

SAE Congress opens Feb. 23 in Detroit

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Once each year, the world's automotive engineering community focuses its attention on this city's riverfront and the SAE International Congress & Exposition.

The gathering, known universally as the SAE Show, runs Monday-Friday, Feb. 23-27 in Cobo Hall.

SAE, the Society of Automotive Engineers, has nearly 50,000 members. The organization launched a major recruiting campaign that is expected to heighten interest in the show and boost attendance this year. Some 35,000 engineers are expected to attend what SAE calls the largest annual meeting of its type.

"This year's congress provides an outstanding opportunity to learn about the latest changes taking place in vehicle engineering and manufacturing, engine design, new materials applications, electronics, fuels and lubricants and other fields," said John A. Betti, general chairman of the congress.

Betti, an SAE member since 1952, is executive vice president — technical affairs and operating staffs at Ford Motor Co.

The SAE event includes about 550 technical presentations that are divided into approximately 170 sessions. About 150,000 square feet of floor space will be devoted to the exhibits of 375 major suppliers to the auto trade. Strong emphasis on engineering materials and electronics is expected this year.

Donald Petersen, Ford Motor Co. chairman, will be the principal speaker at the annual banquet Feb. 26. It is expected to draw 5,000 people, SAE said.

GM, importers win round in suit over CAFE fines

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A suit over EPA's handling of fines imposed under the Corporate Average Fuel Economy law has turned into a fight over whether public interest groups can sue when they disagree with federal regulatory decisions.

General Motors and the Automobile Importers of America group have succeeded in getting a case they lost returned to court over the issue of whether consumer groups — in this case the Center for Auto Safety, Public Citizen, Union of Concerned Scientists and Environmental Policy Institute — can sue a federal agency as third parties to a regulatory decision.

The case will come before the full 11-judge U.S. Court of Appeals for the District of Columbia as the result of a joint petition filed by GM and AIA. A majority of the judges agreed to rehear the case some time between late April and early June.

Last December, three judges ruled unanimously that EPA had acted illegally in determining adjustment factors that ultimately reduced CAFE fines for various companies. The Center for Auto Safety estimated the court's refusal to allow the adjustments cost GM about $250 million and Ford an estimated $50 million. AIA members such as Jaguar, BMW, Volvo, Saab, Peugeot and Porsche would also have had to pay an unknown amount of fines.

EPA decided in 1985 to compensate auto companies with CAFE credits after the agency changed its testing procedures. The agency reasoned the test changes would have resulted in higher average fuel economy numbers for vehicles made since 1975, when CAFE standards were first made law.

Auto companies were told they could use the credits to increase their present or future CAFE, or use the credits to offset penalties they might have incurred as a result of missing the standard. Adjustments were given for cars made during the 1975-84 model years.

In July 1985, when EPA announced the adjustment, it was estimated the change would give Ford and GM CAFE credits worth some $500 million.

If the full court rules that consumer groups do not have standing or grounds to sue, then the entire decision on CAFE adjustment is thrown out.

Indeed, serious questions about who could challenge EPA on such a matter would be raised. For example, the Center for Auto Safety and the state of California have challenged the proposed 1987-88 CAFE standards as being too low.

The Competitive Enterprise Institute, a conservative think tank, has gone to court because it believes CAFE levels are too high.

At the end of last year, a spokesman for the vice president's Task Force on Regulatory Relief said the Reagan Administration planned to "rethink" the automotive fuel-economy standards, and made it clear that a full-fledged repeal may be sought.

Lienert ends career at Automotive News

Editor-at-large Robert M. Lienert has left Automotive News for health reasons.

Lienert, 60, was editor from 1974 until late 1985, when he was named editor-at-large. He joined the paper in 1953 as an editorial associate, was named news editor in 1962 and managing editor in 1966.

He came to Automotive News from the Detroit Free Press, where he was a copy editor from 1947 to 1953. He received his bachelor of arts degree in journalism from the University of Nebraska and his master of science degree from the Medill School of Journalism at Northwestern University.

In a memo to the staff announcing Lienert's resignation, Automotive News Publisher and Editorial Director Keith E. Crain said, "I know each of you shares my sadness at the loss of Bob's spark, smile, humor and charm — to say nothing of his tremendous contribution as editor of Automotive News for more than a decade, and most recently as a teacher to all of us and confidant to many."

Lienert

Lienert was promoted to editor shortly after Crain Communications Inc. acquired the paper in 1971, and it was under his directorship that the paper expanded its scope from dealer issues to become an industry-wide journal.

Lienert was one of the first to cover the import-car industry. In the mid-1950s, he developed what may have been the first directory of importers and distributors.

A.B. Volvo presented Lienert and Automotive News a silver globe in 1961 for "outstanding achievement in evaluating and communicating the progress of the automotive industries of the world.' It is believed to be one of only two that exist. Lienert and Automotive News also were honored with a loving cup from Simca in 1964 for "outstanding coverage of the import-car market."

Lienert, his wife, Audrey, and two of their five children live in New Baltimore, Mich., where he is chairman of the city zoning board of appeals and director of the public library.

Crash rates for doubles termed high

WASHINGTON — Compared to their numbers on the highway, trucks with two trailers are two to three times more likely to be involved in crashes than tractors pulling only one trailer, according to the Insurance Institute for Highway Safety.

The crash involvement rate of "doubles" is greatest in single-vehicle crashes, a major new study by the insurance institute pointed out.

Crashes of doubles are much more likely to involve jack-knifing than crashes of singles, suggesting that the instability of the double configuration is a factor in their higher crash rate, the study found.

The institute's study was made in cooperation with the Washington State Patrol. It covered two years and included 734 large trucks that were involved in crashes on interstate highways, compared to a sample of trucks that were not involved in crashes.

In their comparisons, institute researchers had to account for the fact that different types of trucks have different travel patterns.

To do that, they investigated truck crashes on the interstate highways and collected information on the type of truck, driver and condition of the equipment.

Then they went to the crash sites and collected information on randomly-selected trucks, thereby establishing a sample for crash-involved trucks and a comparison, or control, group.

They said that was the only way to compare the effects of truck and driver characteristics for trucks of different configurations under similar travel conditions.

The National Research Council has said that the greater cargo capacity of double-trailer combinations means motor carriers could reduce overall mileage by 9 percent.

At the time of the council's study, there was no definitive data on the relative crash risk of doubles and singles, the insurance institute said.

Despite that lack of definitive data, the insurance institute added, the council estimated that overall mileage reductions associated with doubles would compensate for their increased crash risk.

But the institute's new data suggests that the reduction in mileage cannot compensate for the increased crash rates of the doubles.

Researchers warned that the widespread use of doubles will inevitably result in a disproportionate increase in truck crashes.

Motor carriers with large fleets argue that they can operate their double-trailer rigs without increased risk because of their careful attention to maintenance and safety, the institute added.

Although doubles in larger fleets have lower crash rates than those in smaller fleets, their rate is still higher than the crash involvement of tractors with only one trailer, according to the institute study.

Other findings from the study showed that empty trucks are more likely to be involved in crashes than loaded trucks; younger drivers are more likely to have crashes than older ones; and drivers operating a truck for six or more hours are more likely to be involved in crashes than those with fewer driving hours.

GMC Sundancer Sport Truck
Eighty California Sundancers from GMC Truck are lined up by the Queen Mary in Long Beach, Calif., for a dealer driveaway that introduced the limited-production model to the Southern California market. The trucks feature special paint treatment and equipment.

Brake law revised

All wheels must have stopping ability

WASHINGTON — Heavy-duty trucks and tractor trailers must be equipped with operating brakes on all wheels under a law taking effect this year.

However, the operators of most trucks built since July 24, 1980, will have until Feb. 26, 1988, to install brakes on all wheels.

The rule reverses 30 years of Department of Transportation policy allowing motor carriers to remove brakes from the front-axle wheels of trucks with three or more axles.

The policy was overturned by a congressional order contained in the Commercial Motor Vehicle Safety Act of 1986.

According to the rule, as of Feb. 26, 1987, every commercial motor vehicle over 10,000 pounds GVW must be equipped with brakes acting on all wheels, with the following exceptions:

- Trucks or truck tractors having three or more axles need not have brakes on front wheels if the vehicle was manufactured before July 25, 1980.
- Trucks and tractors manufactured between July 24, 1980, and Oct. 27, 1986, must be retrofitted to meet the requirements of the rule by Feb. 26, 1988, if the brake components have been removed.

The rule also requires that any full trailer, any semitrailer, or any pole trailer having a GVW of 3,000 pounds or less must be equipped with brakes if the weight of the towed vehicle resting on the towing vehicle exceeds 40 percent of the GVW rating of the towing vehicle.

The Federal Highway Administration said the rule amends Federal Motor Carrier Safety Regulations and brings heavy-duty trucks into compliance with regulations similar to those imposed by NHTSA on passenger vehicles.

Truckers long have argued that the removal of front-axle brakes helps to prevent jackknifing. Manufacturers claimed, however, that brake removal increased the likelihood of truck accidents.

The FHWA said the removal of truck brakes creates an imbalance in braking.

"The lack of front brakes increases . . . the risk of drive and trailer axle wheels locking and resulting in instability (jackknifing or trailer swing); increases the stopping distance, since the number of axles available to apply retarding force is reduced by one; and increases the demand for work on the remaining brakes," the agency said.

Light-truck diesel sales steady at 13% for Ford; GMC notes dip

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Diesel-engine sales for Ford's light-duty trucks have leveled off, but they are down a bit at GMC.

Overall, though, diesel engines continue to account for a fairly significant percentage of light-duty-truck sales.

Recently, Ford renewed its contract to purchase Navistar International's 6.9-liter diesels for its light trucks. The contract, due to expire in January, was extended through the 1990 model year.

Ford installed Navistar's diesel engine in 89,000 F-series pickups in the 1986 model year, 13 percent of F-series production.

Unit sales of diesels in the F-series were up from 1985's 73,000, but the 13 percent share of F-series sales remained the same.

In the first quarter of the 1987 model year, the engine continued to account for about 13 percent of Ford's light-duty-pickup mix, according to a Ford official.

Ford also installed the 6.9-liter in about 8,500 Econoline vans in the 1986 model year, where they accounted for 3.8 percent of Econoline sales.

That was off slightly from 9,000 units, or 4 percent of the Econoline mix, in the 1985 model year. In the first quarter of the 1987 model year, the percentage was 3 percent to 3.5 percent.

Navistar has sold more than 300,000 diesel engines to Ford since the contract took effect in 1981.

Chevrolet and GMC also offer a 6.2-liter diesel engine in their full-sized G-vans, Blazer/Jimmy, Suburbans and full-sized pickups.

GMC retailed 11,497 light-duty diesel-equipped trucks in calendar 1986, equal to 6.2 percent of its sales. That was off from 16,641 in 1985, when they accounted for 8.5 percent of GMC's sales.

Light-truck sales dip 14% for month

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Light-duty truck sales were off 14.5 percent in January, with all the domestic makes and the imports as a group showing declines.

Some of the individual imported lines reported gains.

There were 276,088 light-duty trucks retailed last month, compared to 323,091 a year earlier.

Chrysler, Jeep and the imports gained in market share, largely at the expense of Chevrolet and GMC.

The full-sized pickup truck segment was weak in January, exerting a big impact on Ford, Chevrolet and GMC.

Ford's F-series, the industry's volume leader last year, had sales of 28,932 in January, off 27.8 percent from a year earlier. Its market share dropped to 10.5 percent from 12.4 percent in the 1986 period.

Similarly, Chevrolet's full-sized C/K pickups, with sales of 20,809, were off 39.6 percent. They had a 7.5 percent share of market, down from 10.5 percent a year earlier.

Ford may be the more disappointed of the two companies because its sales decline followed styling and engineering changes introduced on the F-series last fall. GM's new pickups won't officially hit the market until late April.

Chrysler is making some headway with its mid-size Dodge Dakota, although some of that new line's sales are obviously coming at the expense of its full-sized Dodge D/W-series pickups.

Dakota sales of 6,333 last month were nearly equal to the D/W series' 6,464.

Combined sales of Dakota and D-series pickups gave Chrysler a 4.6 percent share of market, compared with the 2.7 percent share it held with other domestically built pickups a year earlier.

Generally, the increase in Chrysler's pickup share of the market helped offset sharp declines in sales of its Caravan/Voyager minivans.

Overall, Chrysler's sales of 37,825 trucks last month gave it a 13.7 percent share of the light-truck market. In January 1986, it had a 12.5 percent share of market on sales of 40,335 light-duty trucks.

Jeep's sales of 16,491 trucks in January gave it a 6.0 percent market share, up from a 5.4 percent share in January 1986 when it sold 17,337 trucks.

Jeep's Wagoneer, Cherokee and Comanche continued to turn in strong performances, though sales of the Wrangler were off sharply.

Wrangler is feeling some pressure from the smaller, lower-priced Suzuki Samurai whose sales continue to escalate sharply.

Suzuki Samurai sales of 5,662 last month were up 97.6 percent from a year earlier, accounting for a 2.1 percent share of the overall truck market.

Suzuki officials are projecting 75,000 Samurai sales in calendar 1987, up from 47,732 last year.

Nissan, Mitsubishi and Isuzu also had year-to-year gains in sales and market share, though import truck leader Toyota was off sharply for the month.

Overall, the imports retailed 57,070 trucks in January for a 20.7 percent share of market. That compared to 60,758 sales or an 18.8 percent market share in January 1986.

Industry Total	**276,088**	**323,091**

Ford held its market share in January, largely because of the strength of its Aerostar minivan and Bronco II sport/utility.

Ford's sales of 80,620 light trucks in January gave it a 29.2 percent market share. Last year, it retailed 94,710 light trucks for a 29.3 percent market share.

Chevrolet's market share dropped to to 23.8 percent from 27.1 percent in January 1986.

Chevrolet retailed 65,754 light-duty trucks compared to 87,542 a year earlier.

The Astro minivan and S-10 Blazer sport utility were Chevrolet's two strongest lines in January, nearly matching their year-earlier performances.

Sales of El Camino, however, slumped to 921 units from 2,465 a year earlier.

GMC retailed 18,328 light trucks, off from 22,409 last year.

Its market share dropped to 6.6 percent from 6.9 percent a year earlier.

Analysts generally are looking for stronger sales this month, given the wide-ranging level of incentive activity which has taken hold not only among domestic, but import truck manufacturers as well.

Sales are also expected to benefit from the new longer warranties, being offered by the domestic manufacturers.

SERVICE MANAGEMENT

NADA seminars offer suggestions on improving service operations

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The real business of the dealer's backshop continues to be dealing with customers and fixing their cars.

That message was not so evident at the National Automobile Dealers Association exposition, which was dominated by computer firms pushing wares for the back shop. But in the NADA seminars, the message was clear: The success of a service operation depends on the competence of its personnel and on its ability to make customers feel the dealership is looking out for their best interests.

Following are several approaches to a successful dealer shop, as advocated by NADA seminar speakers.

Sink-or-swim approach

Every once in a while, a throwback comes along, spits in the face of progress and shows that the old way wasn't necessarily the bad way.

Fred Frederick, owner of Fred Frederick Chrysler-Plymouth, Laurel, Md. is such a case.

Frederick, an ex-Marine drill instructor, doesn't much believe in factory-trained mechanics. He isn't thrilled by computers in the service shop, although he has them.

What Frederick does believe in, is the mechanic who is able to look at a machine and, by wits and experience, figure out how to fix it.

Frederick doesn't really invest much time in training his mechanics. They train themselves. His training program — and it very definitely is an organized program — might best be described as sink or swim.

For 15 years, each mechanic in Frederick's shop has gone through the program.

Frederick doesn't look for an experienced mechanic with a complete set of tools. He won't take graduates of vocational schools. And he won't take experienced mechanics. He looks for young people willing to learn.

Frederick puts his applicants through a written mechanical comprehension test and a simple manual dexterity test.

Having passed Frederick's rigorous application process, trainees must pass 10 training assignments — generally within two years.

Trainees learn on their own time while being paid for duties in the shop relating to their skill level.

Frederick figures he is doing a good job if two of four applicants pass through training to become full-fledged technicians.

"If you have a problem teaching yourself, this is not the program for you," Frederick says.

"Take Assignment 6, for example. We give a guy a wiring harness and the wiring manual. He has to figure out what goes where. When he does that, he is among the top 5 percent of mechanics in electrical repair. I have been in shops where the car is all torn apart by a mechanic looking for a short. You don't see that in my shop."

Technician trainees also must learn to explain the repair process.

"When he learns how to explain what he has just learned, he'll go over an tell his buddies," he says.

Frederick will ask a trainee to explain a repair procedure. When the trainee gets stuck, Frederick will help out.

In most cases, though, the trainee is on his own.

Frederick teaches his technicians to fix a broken automatic transmission by giving them a broken transmission and a service manual. (Customer cars are not used for such tests.)

"When the car is back together, I'm the guy who drives it off the lift," Frederick says. "Everybody in the shop watches and waits because everybody knows that when I put that car in gear, it is the technician's examination."

Technician trainees start at $5 per hour. As they pass each assignment, they get a raise. When they have completed all 10 assignments, technicians work at a flat rate of $13.50 an hour. Frederick said a good mechanic can earn $35,000 to $40,000 per year.

Does the Frederick training program work? He claims to have one of Chrysler's highest Customer Satisfaction Index ratings.

Perhaps more telling, though, is his statement that, "During the tough times at Chrysler, we never had a red month because of our service shop business."

Frederick's dealership is relatively small, selling some 850 cars per year.

Frederick admits such a program probably would not work at a dealership where the owner is not very involved in the service end.

Teams: Old, new ways

The more things change, the more they stay the same.

Such is the case with the team approach to repairing automobiles as outlined by Ed Kovalchick, president of Net Profit, a national automotive management and financial consulting firm in Alabaster, Ala.

Kovalchick also is a partner in 10 West Coast auto dealerships.

In the 1950s, Kovalchick notes, there was a more direct relationship between technician and customer. The service manager was the only stop between the two.

It was common for service managers to dispatch work into groups or teams of technicians, skilled in all types of repairs. (Teams may or may not work together on one car, and they split the hourly pay for their work.)

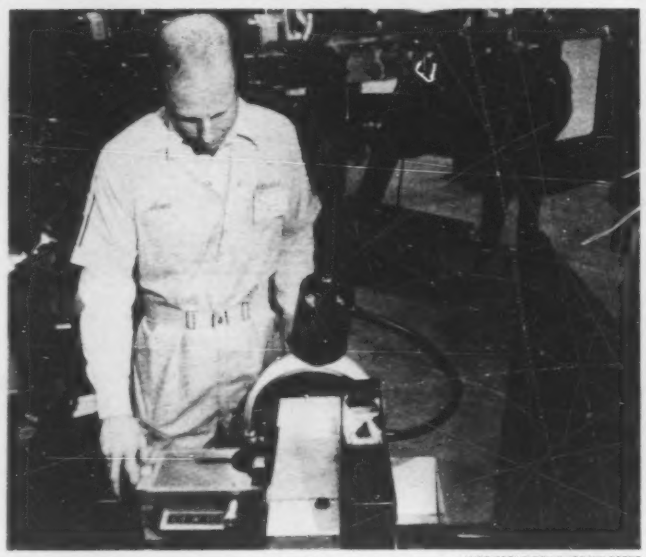
As the number of dealerships diminished and cars became more complicated, dealerships began using specialists, adding service advisors, warranty managers, service greeters, customer relations personnel and computers to keep track of everything.

"What I suggest is an evolutionary cycle," Kovalchick says. "If you look at the way shops were run 30 or 40 years ago when they were successful, there was a direct relationship with the customer — only a service manager between the technician and the customer. Now, there is no personal contact with the technician. He is lost in his own world. The technician today doesn't have reason to respond to a customer."

The current team approach that Kovalchick advocates breaks the service shop into small groups of technicians with a single service manager. Each team functions as a service operation in its own right. The team, Kovalchick says, "has its own personality" and weeds out members who hinder the efficiency of the group.

However, Kovalchick warns that the team approach will not work if the dealership is not committed to the approach. He also claims the service shop must be operating efficiently with the current system before switching to teams.

"The foundation of a well-run service department has nothing to do with teams," he says. "Teams are the icing on the cake to get the extras they provide: the opportunity for training that occurs when people work closely together; the need for fewer repair stalls; competitiveness within the dealership; a career path for young mechanics."



Repair equipment was a rarity at the NADA exposition AUTOMOTIVE NEWS/JOE WILSSENS

He adds, "All of this will not fit if the foundation is not in place. The foundation starts in the parts department, the writing of repair orders, the cleanliness of the shop and the skill and attitude of the employees."

He says it generally takes nine months for a dealership to put its shop in order before the team approach can be put into effect. Sometimes, he says, it is just not possible to adopt a team system.

The dealer must be committed to operate such a system, not merely to try it out, he says.

Bob Gault, Gault Chevrolet Co., Endicott, N.Y., claims the dealership's service sales and profits were No. 3 in a three-dealer market when Kovalchick's firm was engaged in 1977. The dealership's service shop is now more profitable than those of the other two dealerships combined, he says.

Advisors not mechanics

A service advisor does not have to be a mechanical expert to be a top performer, claims James Preston, senior vice president of Assessment Designs International, a consulting firm in Maitland, Fla.

Preston came to that conclusion as a result of a study of more than 1,000 General Motors service advisors, service managers and service directors.

Preston says the best service advisors are those who are good listeners, who ask customers the proper questions to determine what is wrong with their cars and who exude confidence that they can fix the problem.

However, Preston says, communications skills are not the only qualities needed by top service advisors. In hiring service advisors, Preston says, the dealer also should consider the ability and experience that will allow an applicant to withstand the environmental rigors of the job: A service advisor must often withstand periods of extreme heat and cold, long hours standing and stressful situations in dealing with customers.

A service advisor's performance may be evaluated based on the Customer Satisfaction Index of the shop's customers and on his ability to sell service to customers, as well as on his communications skill.

Motivating personnel

W.C. Smith, service manager for Capitol Cadillac Co., Greenbelt, Md., has upgraded the dealership's service-related Customer Satisfaction Index from 10th lowest in 1981 to fifth highest in 1985 among large, exclusive Cadillac dealers.

Smith motivates his employees by encouraging pride in their jobs and by providing monetary rewards for a job well done.

Employees receive incentive pay for outstanding work, and there are awards and rewards for the top employees of the month and year.

Smith says the dealer must be committed to the success of the operation and must be in direct contact with customers and employees. He subscribes to "management by walking around."

Dealers' shop business registers 5% increase for 1986

SERVICE INDEX
108.7★

	December '86 vs. December '85	12 mos., '86 vs. 12 mos., '85
Gross Profit on All Labor and P&A Sales	+9.8%	+7.1%

Sales of All P&A	+11.8%	+4.3%

★—Survey by Automotive News shows that dealers' service and parts business in December 1986, was 108.7 percent of business in December, 1985. Service business during all of 1986 was 105.3 percent of business during 1985.

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships during 1986 continued to climb, as it has since 1980.

The Automotive News Service Index showed that shop business at dealerships in 1986 climbed 5.3 percent over business during 1985.

The greatest gain in the 24-year history of the Service Index occurred in 1984 when shop volume increased 13.5 percent over 1983.

In 1980, service volume dipped to 98.3 percent of the 1979 figure.

Service volume during 1986 declined in only two months as compared with corresponding months of 1985.

In February 1986, the Service Index fell to 99.6 percent of the year-earlier month. And in November 1986, the Index fell to 97.7 percent of November 1985.

In December 1986, business in the backshop recovered after the November dip.

The Service Index shows that shop business at dealerships in December amounted to 108.7 percent of the volume in December 1985.

A Chevrolet dealer in the Northeast, whose service volume increased in December, said, "We sold and delivered more new vehicles in 1986 than in any other year. They had to come back for service — lube, oil, filters, state inspections. We also retain a large share of former new-vehicle buyers."

A Western Buick dealer attributed his December service volume increase to a service advisor who did a better job of selling work.

A Northeast Saab dealer said service volume increased about 30 percent in December, but he claimed the increase was unusual for the month.

Some dealers who reported declines in December service business attributed the drop to the holiday season.

Total labor sales (customer paid and warranty) registered the biggest gain during 1986, up 8.6 percent. Gross profit on all labor, parts and accessories was up 7.1 percent; shop parts sales (customer paid and warranty) were up 6.6 percent; and sales of all parts and accessories climbed 4.3 percent.

Repair orders written were down 0.1 percent for 1986.

Parts and accessories sales to off-premises customers were up 1.8 percent for 1986.

Sales of all parts and accessories was the leading indicator in December, up 11.8 percent over the 1985 month. Also showing impressive gains were shop parts sales, up 10.0 percent; total labor sales, up 9.9 percent; and gross profit on all labor, parts and accessory sales, up 9.8 percent.

Repair orders written were up 2 percent in December.

Parts and accessories sales to off-premises customers were up 13.7 percent in December.

Hughes ups GM's military exports

An independent study indicates General Motors, through its acquisition of Hughes Aircraft Co., has moved into the top 10 among U.S. firms selling military hardware abroad.

Ford Motor Co. climbed into the 11th spot in fiscal 1985, according to the new study by the Investor Responsibility Research Center, Washington. The company was not among the top 30 in fiscal 1984.

Data for the IRRC's "U.S. Arms Exports: Policies and Contractors" was culled from unclassified Pentagon documents.

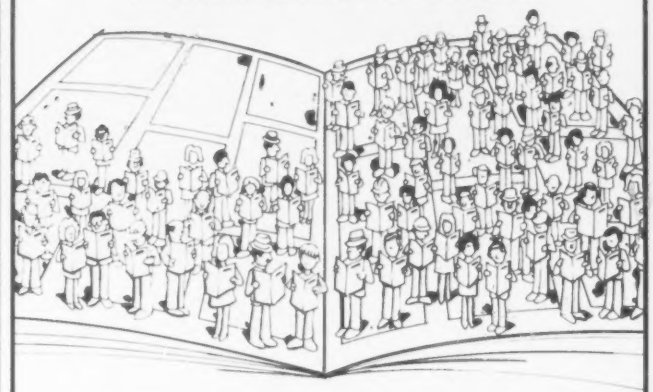
GM alone sold $86.9 million worth of military goods outside the United States in fiscal 1985 to rank 13th among U.S. firms, according to the study. Hughes was 12th with sales of $94.3 million. The two firms were not combined in the IRRC's ranking because GM did not own Hughes during fiscal 1985.

If GM and Hughes exports had been combined, GM would have ranked 10th with a total of $181.2 million.

Ford exports increased dramatically to $100.8 million in 1985, up from just $7 million in fiscal 1984, according to the study.

Ford's rapid rise was due to sales of Sidewinder and Chaparral missiles, an IRRC spokesman said.

Why rely on word-of mouth when you can build a crowd in the back of Automotive News?



Auction advertising builds stong auction traffic.

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you get a big regional — or even national — attendance with an ad in the Auction Directory.

The Automotive News Auction Directory is a tried-and-proven tool for auctions looking to build attendance or promote a special function. That's what keeps our auction advertisers coming back for more. More results. When you want results . . .

Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

DRI, Power join up to sell data

DETROIT — Data Resources Inc. and J.D. Power and Associates have announced plans to market information services.

DRI is an economic forecasting company, and Power is an automotive market consulting firm.

The two companies said they already have collaborated on four projects — the Power Report, the North American Light-Vehicles Service, the OEM Auto Supplier Service, and the Power California Forecast. They plan to develop other projects.

J. David Power III, who founded the California consulting firm, said one project may be an automotive transactional price index.

John H. Hammond Jr., who recently joined J.D. Power and Associates as a partner, will be responsible for joint-venture products. Prior to joining Power, Hammond spent five years at DRI, where he was a vice president and automotive econometrician.

Joint-venture forecast-service income is currently estimated at $750,000 and is expected to double to $1.5 million within 18 months, Power said.

CENSUS

FROM PAGE 1

72 for American Motors-Renault. The combined loss of 258 grew to 268 because of a change in the number of intercorporate duals.

All figures in this article and in the accompanying tables signify the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

As noted, the dealer count has dropped in 28 of the last 30 years. During that period, the total has fallen from 37,982 to 20,405, a decline of 46 percent.

The reasons are many and varied. There was considerable overdealering in the immediate post-World War II period, and many of those outlets did not survive the tougher sales climate of later years.

At every company, the trend has been toward fewer but larger dealerships. Today, the movement is toward megadealerships, huge operations with many franchises and several high-volume locations.

And there has been a tremendous change in the makeup of the dealership population. At the beginning of 1957, only 4.5 percent of the domestic outlets carried a line of imported cars. Today, 60 percent of the domestic dealerships also have an imported make in the showroom, either a captive or an independent.

Little more need be said about the importance of imports to a dealership's survival.

Putting those percentages into numbers, 1,707 of the 37,982 domestic stores had an import on Jan. 1, 1957. Now, 12,218 of 20,405 handle imports along with their domestic models. The captive total took a big jump in mid-1957 when some 5,500 Buick and Pontiac dealers began stocking GM's imported Opel and Vauxhall lines.

In 1986, the dealership declines were light in the first and fourth quarters, heavier in the second and third. By quarters, the dips were 25-77-127-39. Here are the quarterly totals:

Jan. 1, 1986	20,673
April 1, 1986	20,648
July 1, 1986	20,571
Oct. 1, 1986	20,444
Jan. 1, 1987	20,405

Six of 14 makes in the domestic census showed increases in franchise totals for 1986. All three Chrysler Motors makes were up, and Dodge's advance of 33 led the industry. There were lesser gains for Plymouth, Chrysler, Lincoln, Mercury and Volkswagen.

Lincoln passed Cadillac in the franchise count. The Jan. 1 figures were Lincoln, 1,617; Cadillac, 1,615. A year earlier, it was Cadillac, 1,615; Lincoln, 1,598.

Cadillac's franchise total was unchanged for the year, and there were declines for Chevrolet, Ford, Renault, American Motors, Oldsmobile, Buick and Pontiac. The steepest losses were posted by Chevrolet, down 75; and Ford, down 66.

As noted, Chrysler Motors boosted its dealer total for the fourth consecutive year. The 1986 advance of 20 outlets followed gains of 15 in 1985, 124 in 1984 and 227 in 1983. The company's dealer count has risen in 15 of the last 17 quarters, and one of the two non-gainers was a no-change quarter.

In addition to its 4,023 car dealerships, Chrysler Motors has three that handle only Dodge trucks. They are not included in the corporate dealership total or the Dodge car-franchise total.

Ford Motor Co.'s dip of 57 outlets in 1986 compared with a drop of 47 in 1985. The total was up 56 in 1984 and up 94 in 1983.

Ford Motor has 113 dealerships that handle only Ford heavy-duty trucks. They are not included in the corporate car-dealership figure or in the Ford Division car-franchise count.

GM's decline of 150 dealerships last year was a bit higher than 1985's loss of 135. GM's car dealership figure is 9,680. The corporate total is 10,235 including GMC truck outlets that do not handle any of the corporation's cars.

The AMC-Renault total was down 72 for the year, but two-thirds of that loss (49) occurred in the second quarter. The 72-outlet decline compared with a dip of 44 in 1985.

AMC has 726 duals with Big Three makes of cars, and Renault is included in 93 percent of them. The AMC-Renault car-dealer total is 1,356; the corporate count rises to 1,472 with the inclusion of Jeep outlets that do not handle either line of cars.

Volkswagen's gain of one dealership in 1986 followed a dip of 22 in 1985. VW has an estimated 170 duals with Big Three cars and with AMC-Renault.

Import increase offsets U.S. dip; dealer total rises

Gains by imports pushed the number of new-car dealerships in the United States to 25,156 on Jan. 1, 1987, up 1.34 percent from 24,823 at the beginning of 1986.

The annual Automotive News tabulation found an increase of 601 outlets handling only imported cars. That more than offset a decline of 268 in those selling domestic makes. Thus, the increase for the year was 333.

The 25,156 total consists of 20,405 outlets for domestic cars and 4,751 that carry only imports.

There were 16,969 dealerships stocking imported cars on Jan. 1, 1987, but 12,218 of them also handled domestic lines and were counted in the domestic total.

At the beginning of 1986, the overall total of 24,823 was made up of 20,673 domestic dealerships and 4,150 import-only locations.

The import outlet total was 16,392, of which 12,242 were import-domestic duals that were included in the domestic figure.

Last year marked the third consecutive increase in the combined import-domestic dealer total. The count rose by three outlets in 1984 and by 99 in 1985.

INVENTORIES

FROM PAGE 1

sold 332 units this year, but made no cars in the United States in February a year ago.

The Feb. 1 inventory of 1,734,299 domestic cars was the highest unit total for that date since 1979. The days' supply was the highest since 1982, when it was 107, according to Automotive News data.

Stocks of unsold imported cars also grew in January. On Feb. 1 they totaled 471,547 units, up substantially from a year earlier when the figure stood at 329,798 units, and up slightly from Jan. 1 when there were 463,165 imported cars not yet sold.

Imported cars in stock on Feb. 1 represented a 62-day supply, compared with a 39-day supply a year before and 38-day at the close of December.

The inventory of imported trucks on Feb. 1 was 206,132 units, or an 85-day supply, up from 202,207 (53 days) on Jan. 1 and 124,781 (48 days) on Feb. 1, 1986.

The car and truck combined inventory represented a 68-day supply compared with 42 days a month earlier and 39 days a year earlier.

Inventories of domestic cars by company as percentages of the total shaped up this way in January: General Motors, 56.92; Ford Motor Co., 23.79; Chrysler Motors, 15.03; Nissan, 1.33; Volkswagen, 1.11; American Motors, 1.00; Toyota, 0.50; and Honda, 0.32.

A month earlier, the shares were: General Motors, 59.81 percent; Ford Motor, 21.46 percent; Chrysler Motors, 14.55 percent; Nissan, 1.16 percent; Volkswagen, 1.15 percent; American Motors, 1.13 percent; Toyota, 0.47 percent; and Honda, 0.27 percent.

A market analyst at Ford Motor Co. offered some insight into that company's production philosophy as it relates to inventories.

On Feb. 1, imported-car inventories were divided by nation of origin his way: Japan 71.61 percent; Germany 17.00 percent and other countries 11.39 percent.

A month earlier, the by-nation shares looked like this: Japan 69.14 percent; Germany 18.29 percent and others 12.57 percent.

January sales dip in Canada

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Sales of domestic new cars in Canada dropped 20.5 percent, or nearly 10,000 units, in January compared with January 1986.

Truck sales also declined in January. The total was 3.1 percent below the year-earlier figure.

Canadian new-car and truck dealers delivered 38,570 cars and 22,981 trucks in January compared to 48,563 cars and 23,727 trucks in January 1986.

American Motors, Chrysler Motors and Ford Motor Co. continued to offer incentives last month on small cars and light-duty trucks.

AMC and Ford were the only automakers to post car sales gains in January. AMC sold 1,039 cars last month, up 10.53 percent from 940 in January 1986. Ford sold 11,385 cars in January, up 1.09 percent from 11,262 a year ago.

Sales of Chrysler Motors' cars fell 22 percent last month despite the continuation of incentives on K-cars. Chrysler sold 7,880 cars, compared with 10,106 in January, 1986.

General Motors car sales dropped 31.05 percent last month, falling to 17,701 from 25,673 in January 1986.

"We're calling it a temporary stalling in the marketplace," a GM of Canada spokesman said.

Pontiac Grand Am and Oldsmobile Delta 88 were GM's best-selling models in January.

Volvo car sales also fell last month. The Swedish carmaker sold 565 cars in January, off 2.92 percent from 582 a year-ago.

Ford and AMC were the only makers to post gains in truck sales. Jeep dealers in Canada sold 1,377 units last month, up 12.4 percent from 1,225 a year earlier.

Ford sold 8,688 trucks in Canada last month, up 2.76 percent from 8,454 in 1986. Ford continued to offer incentives on its Ranger model during January.

GM sold 9,140 trucks last month, off 9.34 percent from a year earlier when it sold 10,082 trucks. Chrysler sold 3,776 trucks during the month, down 4.79 percent from last year when 3,966 were sold.

Korea's new policies shake up industry

By Andrew Tank
STAFF CORRESPONDENT

SEOUL, South Korea — The liberalization of the South Korean auto market is causing a dramatic shake-up of domestic automakers.

Since Jan. 1, Korean auto firms have been permitted to sell any type of vehicle. This comes on the heels of a five-year, state-controlled carve-up of the vehicle market, which restricted firms to selling certain types of vehicles.

January sales figures show domestic sales up 30 percent over last year, but the bonanza is shared unevenly. Daewoo Motor Co. increased sales almost 75 percent, Hyundai Motor Co.'s sales rose more than 45 percent, while Kia Motor Co.'s sales fell 3.9 percent.

Daewoo's success is due to its export-quality LeMans subcompact. Kia's decline is due to the termination of its monopoly on small commercial vehicles.

The most significant development in terms of the international market is the early success of Hyundai's light-duty commercial vehicles. The vehicles are expected to be exported once they are proved at home.

In January, Hyundai took orders for more than 1,100 Grace minibus/van vehicles, sold more than 900 one-ton Porter trucks, and started selling its 2.5-ton Mighty truck. It also sold 5,000 subcompacts (Excel and Presto) and 2,800 mid-sized Stellar, Sonata and Grandeur cars. The company sold 9,668 vehicles last month, up from 6,600 in January 1986.

Meanwhile, Daewoo last month sold almost 3,000 subcompacts (LeMans and Maepsy), 1,300 mid-sized cars (Royal Salon, Prince Salon) and 650 other vehicles. Daewoo also started marketing its Elf-II 2.5-ton truck.

In contrast, Kia's market share has been severely hit. It managed to hold on to customers for its popular Besta minibuses/vans and even to post an 8-percent sales increase over January 1986. But sales of its one-ton trucks fell 12 percent to 2,800, and sales of 2.5-ton trucks fell 42 percent to 430 compared with January last year.

CHRYSLER

FROM PAGE 1

over here is selling some cars that say Dodge on them and they may or may not do the things that we need?" Robertson asked.

"Just to be absurd," he said, "if they were to do a sporty-looking car with a velour interior and opera lamps, it would clearly make the wrong statement for Dodge.

"Not that I'm suggesting these guys are crazy. Far from it. But there is some serious discussion about how much synergy we want to have."

The management of Mitsubishi products sold in Dodge and Plymouth showrooms currently is handled by a designated staff within Chrysler Motors Import Operations.

Marketing has stressed their Japanese origin and is aimed at the so-called import buyer.

Mitsubishi Motors Corp. does not favor merging management of its imports into the brand structure, according to Robertson.

"MMC has expressed concern that if we simply swept their products into the rest of the array, they would not get the special attention and the focus they get as a discrete function," Robertson said. "MMC would prefer to deal with a dedicated group whose interests are purely the distribution of MMC products."

Discussions regarding retaining management of the imports as a separate function have included the possibility of housing the Mitsubishi line in a separate showroom.

"Let's say you really wanted to separate them and dedicate your attention to them," Robertson said. "Then, would you be better off merchandising them as a separate franchise? We've talked about that. They're just ongoing conversations about would this make sense or would that make sense.

"My personal guess is that we will not do a separate import franchise. That we will continue to sell under domestic brand names and work as hard as we ever have to try to slot them in," Robertson said.

Dealer sources indicated that some dealers had been approached about their willingness to establish a separate import showroom on a test-market basis. The proposal, however, has apparently not been acted on, dealer sources said.

Robertson said the debate over positioning the imports is being played out against a backdrop of increasing international competition. Customers can no longer simply claim to be shopping for a Japanese import vs. a domestic vehicle.

"If people used to go shopping for a Japanese import rather than just a car or a domestic car, I don't know what they are doing these days now that there are Brazilian imports, Korean imports, joint-venture cars, transplant cars and we at Chrysler are bringing in cars from Canada and Mexico," Robertson said.

"The whole thing has become so much more complicated. And that's the scenery against which all of these discussions are played out: Do you want to be seen as an import franchise or a domestic franchise?"

U.S. output of '86 cars declines 1%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production for the 1986 model run dipped 1.11 percent from the 1985 total.

The manufacturers' revised totals show that 7,890,392 cars were assembled during the 1986 model run. That compares with 7,975,390 for the 1985 period.

General Motors reported production of 4,350,839 cars, down 3.11 percent from 4,490,883 in the 1985 model run.

Ford Motor Co. built 1,809,604 cars, a 4.25 percent increase from 1,735,782 in the 1985 model run.

Chrysler Motors' total declined 11.13 percent to 1,168,836 from 1,315,326.

American Motors' 1986 model-run output of 64,873 was 56.80 percent below the prior year's 150,189.

New United Motor Manufacturing Inc., the GM-Toyota joint venture, assembled more than six times as many cars in the 1986 model run as in the 1985 period. The figures were 179,026 vs. 27,943.

The three foreign-based U.S. producers also showed output gains during the 1986 model run. Nissan Motor Manufacturing Co. U.S.A. reported 50,763, up from 17,368. Honda of America Manufacturing Inc. was up 16.76 percent to 181,101 from 155,102, and Volkswagen of America was up 3.08 percent to 85,350 from 82,797.

Automotive Industries to build Indiana plant

TORONTO — Automotive Industries, Strasburg, Va., will construct a $12 million (U.S.) plant in Greencastle, Ind., to make door panels and interior trim for Diamond-Star Motors, Bloomington, Ill., and a Ford plant in Louisville, Ky.

The plant is expected to be completed in September 1987, with full production achieved by late 1988. At that time, the plant will employ 200 persons.

Redpath Industries, parent company of Automotive Industries, estimated the new plant's annual sales at $20.6 million.

OBITUARIES

Nicholas Lattof

ARLINGTON HEIGHTS, Ill. — Dealer Nicholas Lattof, 85, died Jan. 27. He opened the dealership that is now Lattof Chevrolet in 1936. Mr. Lattof was the Time Magazine Quality Dealer of the Year in 1971.

Sidney Trencher

GLEN COVE, N.Y. — Sidney Trencher, 67, founder and president of North Country Motors Ltd., Great Neck, N.Y., and Trencher Motors Ltd., Amityville, N.Y., and Glen Cove, N.Y., died Jan. 7.

Edward F. Moore Jr.

CONSHOHOCKEN, Pa. — Edward F. Moore Jr., 63, president of E.F. Moore Inc. (Chevrolet-Oldsmobile) here, died Feb. 3. Mr. Moore was secretary-treasurer of the Tri-State Chevrolet Dealers Association and former secretary-treasurer of the Philadelphia-Camden Metropolitan Chevrolet Dealers Association.

PRODUCTION

Car output dips to 174,924 after highest week of year

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's domestic auto production was pegged at 174,924 cars, 1.49 percent below the previous week's 177,573 but 2.49 percent more than the year-ago week's 170,667.

The prior week's build was the highest for any week since the 178,068 assembled the week ended Dec. 20.

So far this year, 987,231 cars have been produced, 10.74 percent below the 1,106,051 completed last year at this point.

Last week's targeted auto output was split as follows: General Motors, 52.46 percent; Ford Motor Co., 25.20 percent; Chrysler Motors, 13.21 percent; Honda of America Manufacturing Inc., 3.57 percent; New United Motor Manufacturing Inc., 2.29 percent; Nissan Motor Manufacturing Co., U.S.A., 1.67 percent; Volkswagen of America, 1.14 percent; and American Motors, 0.46 percent.

GM has increased its number of indefinite layoffs by 3,500 to 33,500. The company said the layoffs are a result of previously reported scheduled adjustments at various GM assembly and components plants.

GM's Norwood, Ohio, plant will be idle for one week starting Feb. 23 for inventory adjustment. The Norwood plant assembles the Pontiac Firebird and Chevrolet Camaro.

GM's Arlington, Texas, plant remains down for installation of paint equipment. The plant is expected to resume output Feb. 23.

Saturday (Feb. 14) overtime was slated for GM's Lansing, Mich., (No. 1) plant.

Ford's Atlanta and Lorain, Ohio, plants were scheduled for Saturday overtime.

All Ford plants except Wixom, Mich., are slated for daily overtime this week (Feb. 16).

Chrysler's Detroit (Jefferson Avenue), and St. Louis (No. 1) plants were scheduled for Saturday overtime.

Daily overtime is slated this week for the following Chrysler plants: Belvidere, Ill.; Newark, Del.; and Sterling Heights, Mich.

Truck assembly steady at 77,445

Domestic truckmakers have extended their year-to-date lead over 1986.

So far this year, 462,463 trucks have been assembled, 1.39 percent more than the 456,120 built last year at this time.

Last week's scheduled truck production totaled 77,445, 0.95 percent below the previous week's 78,185 but 8.03 percent more than the year-ago week's 71,668.

Ford Motor Co. slated Saturday (Feb. 14) overtime at its Norfolk, Va., and Twin Cities, Minn., plants.

All Ford truck plants are scheduled for daily overtime this week (Feb. 16).

Chrysler Motors' Warren, Mich., plant is slated for daily overtime this week.

Canadian auto production climbs

Canadian automakers scheduled production of 21,451 cars last week, 7.34 percent more than the previous week's 19,985 and slightly higher (0.83 percent) than the year-ago week's 21,275.

Year-to-date, 116,039 cars have been assembled, 9.84 percent below the 128,699 completed last year at this time.

Truck production was estimated at 17,957 units last week, 11.38 percent more than the prior week's 16,123 but 5.21 percent below the year-ago week's 18,943.

So far this year, 96,363 trucks have been built, 19.33 percent below the 119,447 assembled last year at this point.

Janesville to build new GM medium

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The Buick-Oldsmobile-Cadillac plant in Janesville, Wis., will build the new Chevrolet and GMC medium-duty truck planned for introduction in the 1990 model year.

The move could eliminate the jobs of 2,000 workers at the Truck & Bus Group's Pontiac Central plant in Pontiac, Mich., which currently builds medium-duty trucks. Production of that truck in Pontiac is expected to end by 1990.

A spokeswoman for the General Motors Truck & Bus Group said that among the factors that influenced the decision were:

Janesville's new local agreement that includes reduced job classifications; a workforce experienced in building trucks; the right-sized production area — one million square feet, versus two million at Pontiac; the Janesville plant's reputation for a high level of quality; and "an excellent labor climate."

The Janesville plant builds full-size GM pickups that are scheduled to be phased out in July. Production of crew cab and cab-chassis models will be transferred from the St. Louis assembly plant to Janesville this summer and will continue until 1989.

The Janesville plant also builds the Cadillac Cimarron and Chevrolet Cavalier.

The decision is another in a series of blows to the city of Pontiac, where GM has announced the closing of a Central Foundry Division plant, the sale of its bus operation and the end of heavy-duty truck production.

Don E. Douglas, president of UAW Local 594, which represents the Pontiac truck plant, said the "only logical reason for GM's decision is to make room for another product." He said that "it would make sense if we picked up the Blazer and Suburban" since Flint will not build them beyond this model year.

Douglas said GM's decision "comes as no surprise to us. We have felt confident that GM has known for some time that the truck would be built in Janesville."

He said his local turned down GM's request to negotiate early on the local contract that expires in the fall. GM wanted a "new, progressive" agreement, he said, eliminating traditional job classifications.

"We have an excellent agreement, and there was no guarantee any jobs would be saved if we tore it up," he said.

The company hasn't proven the value of reducing classifications, Douglas said.

The Pontiac plant, which is divided into East, West and Central divisions, makes the C/K pickup, medium and heavy-duty trucks and coaches, and the S-truck.

The workers who build medium-duty trucks have seniority rights to move to Janesville, Douglas said, but only 1,800 will be needed to build the new truck. Janesville currently has about that number building pickups.

Douglas said the 9,000 members of Local 594 will take a strike vote Feb. 19. He said a thousand grievances have been filed over misclassifying workers, promoting them improperly and trying to eliminate negotiated relief time.

EPA is facing tough decision on air in cities

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — EPA Administrator Lee Thomas is between a rock and a hard place. At the end of this year as many as 70 metropolitan areas of the United States will not comply with federal ozone control limits.

If Thomas proposes strict pollution control measures to enforce the clean air standards, his agency risks a severe public outcry. Those measures could include gasoline rationing or other restrictions on vehicle operation.

If he does not propose effective ozone control measures, the agency will have to impose sanctions against non-attainment areas. Those sanctions include bans on future construction of polluting facilities, loss of federal highway construction money and the loss of federal funds for water treatment facilities.

Faced with these two equally undesirable alternatives, Thomas went before the House subcommittee on Health and the Environment last week to ask for advice. All he received was a reminder that he is the chief environmental protection official of the United States and that Congress wants the law enforced.

That is because Congress is also in a difficult position. When Congress passed the Clean Air Act it directed EPA to set the ozone standards on the basis of what science believes is healthy for humans. Under the law, EPA is barred from considering the feasibility of meeting the standard or its potential cost when determining how much pollutant can be allowed in the air.

Congress must insist that the limits be observed, it seems, or risk criticism for ignoring public health. EPA is already being sued by various public interest groups for not proposing ozone control strategies.

Thomas was told by subcommittee chairman Henry Waxman, D-Calif., that the best Congress can do is to pass an even tougher clean air law this year that might contain another extension of the ozone control deadline. Waxman said the extension would be "conditioned on strengthening (EPA's) regulatory powers and implementation of many of the measures that can achieve greater progress toward attainment."

One of the ozone control measures refered to by Waxman is the control of gasoline vapor that escapes into the air during vehicle refueling. Gasoline vapor is a volatile organic compound that reacts with nitrogen oxide and sunlight to form ozone. In the stratosphere, ozone acts to protect the earth from the sun's ultraviolet rays. At ground level, ozone is a pollutant that is associated with a variety of respiratory ailments.

Keys in these P&G products will allow 750 lucky consumers to win Chevy Corsica, Beretta or truck

GIVEAWAY: *Chevy, P&G join hands in $50 million promotion*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chevrolet and Procter & Gamble Co. will team up to merchandise Chevrolet's new Corsica, Beretta and pickup truck in what the automaker believes is the largest cross-promotional effort ever.

Procter & Gamble will commit nearly $40 million to the promotion and the advertising of it; Chevrolet will give away 750 vehicles, worth about $10 million.

There is no cost to dealers to participate in the program.

The promotion, which begins April 25, works like this: Plastic keys will be placed inside seven Procter & Gamble products — Tide, Bounty, Crest, Charmin, Folger's, Pampers and Downy.

The keys can be taken to the local Chevrolet dealership where they will be placed under a black light installed in a Corsica, Beretta or truck floor model. By viewing the key under the light, the dealership personnel will be able to tell if the key is a winner.

Winners may choose a 1987 Corsica or Beretta or a 1988 Chevy full-size pickup. Those who hold keys that are not instant winners will be eligible for a drawing in which more vehicles will be given away.

Chevrolet said it is interested in the promotion because 98 percent of U.S. households use one or more of the Procter & Gamble products included in the merchandising effort.

The promotion is intended to stimulate Chevrolet showroom traffic by requiring that the keys be brought into the dealership and by requiring that the person bringing in the key sit in one of the vehicles being promoted.

It is expected to attract many women, and Chevrolet has been particularly aggressive in going after the women's market. It also is intended to draw non-Chevrolet buyers. Chevrolet

Car output will drop in 2nd quarter

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

The car production forecast for the second quarter is a bit lower than last year's output, but all eyes are on General Motors. Analysts believe that GM will have to make further cutbacks or extend its incentives.

The second quarter domestic industry forecast of 2,062,069 is down 4.46 percent from the 2,158,227 built during the same period of 1986.

GM's second-quarter forecast of 1,142,708 cars is only 1.52 percent below the 1986 total of 1,160,346, but several analysts said that further trimming may be necessary.

SECOND QUARTER AUTO PRODUCTION
1987 forecast vs. 1986 actual

	1987	1986	% change
GM	1,142,708	1,160,346	– 1.52
Ford	433,000	496,955	–12.87
Chrysler	279,000	352,168	–20.78
AMC	9,850	16,040	–38.59
Honda	84,455	51,871	+62.82
NUMMI	52,000	55,121	–5.66
Nissan	36,256	—	—
VW	24,800	25,726	–3.60
Industry	2,062,069	2,158,227	– 4.46

"If the domestic sales rate remains above 7.5 million, which is certainly encouraging, GM may not need to make drastic production cuts," said Scott Merlis, of Morgan Stanley. "If sales go down to a 5.8 million rate like we saw in January, the production planners will have to go back to the drawing board."

Does the answer lie in scaling back production or in offering incentives? Merlis believes that unlike 1986, GM is leaning toward cutting production.

Wendy Beale, analyst for Smith Barney, Harris Upham & Co., said the use of incentives will depend upon how aggressive GM decides to be to increase its market share.

On that note, said analyst Mike Luckey, of Shearson Lehman Brothers, GM would be better off adjusting its schedule to keep inventory in line with sales. With the present production forecast, he said, GM will end up with an approximate 85-90 day-supply during the second quarter. The industry norm is about 60-65 days.

GM will be more inclined to cut production than to expand incentives, added David Healy, of Drexel Burnham Lambert Inc. Its production

'Team and tech' is SAE theme

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — "Teamwork and Technology" is the theme of the 1987 SAE International Congress, which opens today (Feb. 23) at Cobo Hall here.

Meeting highlights will include: a sold-out banquet of nearly 5,000 to hear guest speaker Donald E. Petersen, chairman of Ford Motor Co.; a family night program featuring Bob Bondurant, race-car driving expert; more than 450 exhibitors, including 40 new ones; and almost 700 technical presentations.

An emphasis will be placed on powerplants (50

Market control in U.S. shifting to megadealers

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Megadealers, superdealers or just "the big guys." It doesn't really matter what you call them, multi-franchise dealers are growing in number — and growing fast.

Although there is no clear consensus about how many franchises a dealer must have to be considered a megadealer — two, three, five or more — most experts believe that within the next 10 years, those marketing and sales behe-

Luxury 2-door joining Acura Legend lineup

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Honda Motor Co. has introduced a two-door luxury hardtop version of its Acura Legend model. It will be exported to the United States next month and to Canada in April.

Honda expects to sell 3,000 hardtops annually in Japan at prices equivalent to $25,500-$26,400.

The company said it aims to sell 25,000 units annually in the United States and another 1,000 in Canada.

The car is powered by a 2.7-liter, 24-valve V-6 engine, transverse-mounted and producing 180 horsepower.

The engine is similar to the four-door sedan's 2.5-liter powerplant, which produces 151 hp. The engine has a computerized, variable intake control system to improve air flow and reduce valve opening duration to provide high torque at all speeds.

Powered by a 2.7-liter, 24-valve V-6 engine, producing 180 horsepower

It is mated to a new four-speed automatic transmission that incorporates a driver-selectable sporty mode for quicker acceleration in addition to a regular, more economical setup. It features progressive torque converter lock-up capability in second, third and fourth gears and torque converter lock-up under deceleration.

A computer unit monitors and controls coolant temperature, throttle opening, vehicle speed, engine speed and five other functions to regulate torque-converter lock-up and shift points.

Described as "an exclusive personal luxury car incorporating Honda's latest technology," the new model is labeled a hardtop by the automaker, although it has B pillars.

According to Honda, "The hardtop look was made possible by using sashless doors and thin, almost unnoticeable pillars which are equal to conventional pillars in rigidity and strength."

The car is 191 inches long, 69.8 inches wide, 54.8 inches high and has a 108.2-inch wheelbase.

Newark plant gets Chrysler ultimatum

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERB

Chrysler Motors has asked UAW Local 1183 at its Newark, Del., assembly plant to reconsider the union's rejection of a plant-saving labor agreement.

Chrysler said it will withhold future product from the plant if a "modern operating agreement" is not reached by March 4.

UAW Local 1183 officials declined comment.

The Newark plant has been scheduled to begin making — in late 1988 — Chrysler's A-body. The A-body is to replace the K-cars now assembled in the plant.

However, because UAW Local 1183 rejected Chrysler's request to negotiate a new operating agreement, the company has notified the International UAW that it is halting all facility construction and training, which were underway in preparation for the A-body.

In addition, the company said it is accelerating a study to find an alternative assembly site for the A-body. Chrysler said it is evaluating purchase or lease of an existing Midwest assembly plant as well as possible use of a "green-field" site.

The company did not name specific locations. However, Chrysler said a Midwest site would offer shipping efficiencies and improved productivity — providing a modern operating agreement was reached.

"Failure by less than half of UAW Local 1183 membership to authorize negotiation of a modern operating agreement is a serious setback to future employment prospects for the Newark assembly plant," Chrysler said in a statement. "We hope the employees will promptly reconsider their action.

"While Chrysler management recognizes the loyalty of Newark employees and the cooperation it has had from the State of Delaware and its local communities, we must consider the need to remain competitive with both foreign and transplant competition in the coming years," the company said.

Chrysler employs 4,300, including 3,800 hourly workers, at the Newark plant. The plant was built in 1952.

The union leadership had recommended reopening the existing local contract prior to the veto by the membership. The current local pact expires in September 1988.

Chrysler has linked negotiation of a new local labor agreement with future product scheduling at several plants during the past year. Citing efficiency and productivity gains, the company has sought changes such as reduced job classifications, pay-for-knowledge compensation and team production.

Permitting a reconsideration of the Newark vote would not be unprecedented. In August, Chrysler agreed to a second-chance vote at its Trenton, Mich., engine plant and averted a plant phase-out.

The Newark vote comes at a time when Chrysler's assembly capacity is strained. The company has entered an unprecedented agreement with American Motors to build its large rear-wheel-drive cars at AMC's Kenosha, Wis., plant. It is also seeking assembly of its subcompact Omni and Horizon America models at the AMC plant.

UAW ads call for fair-trade law

$2 million campaign attacks imports, stresses jobs and wages

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

To get across its message on trade, the UAW has begun a three-week, $2 million national TV ad campaign. The UAW said it is confident the message will "strike a responsive chord" with American viewers.

UAW President Owen Bieber said the ads "reflect and reinforce the belief of the American people that it's time for strong congressional action on the trade crisis facing the nation."

The campaign features three 30-second spots running in news, public affairs and prime-time slots on stations in 20 markets.

One spot, narrated by actor E.G. Marshall, attacks "cheap imports . . . from countries where corporations pay workers a fraction of U.S. wages." Marshall asks, "What happens to our young people if they have to match those wages to get a job?"

The two other ads show bleak scenes of vacant farms and closed factories. One of them asks, "What are we doing to America? We're letting other countries supply our food . . . our cars . . . our clothes . . . our electronics . . . and dependence on imports could one day shut down America."

All three spots end with a call for an effective trade policy.

The ad campaign follows through on the union's focus on trade legislation during its annual legislative conference held last week in Washington.

The conference included a demonstration on Capitol Hill and visits to legislators in support of UAW concerns, which include laws that would penalize nations for unfair trade practices.

To the list of trade practices considered unfair under U.S. law, the UAW wants to add violation of labor rights by foreign countries with dictatorial governments, such as South Korea. Such practices are called unfair in the trade bill now before the House.

The General Motors-Daewoo joint venture in Korea is scheduled to begin shipping LeMans automobiles to the United States in May.

In the conference's keynote address, President Owen Bieber said the union strongly resists "any approach to competitiveness that targets American wages and American working conditions for further reductions or erosion."

"If corporations just keep going where labor is cheapest . . . the Bangladesh standard of living is where we are headed," Bieber said.

He said that the first step toward strengthening the United States' competitive position is "reducing those horrendous trade deficits."

Bieber urged support for the trade bill introduced earlier this year in Congress and called for congressional action on plant-closing legislation to protect workers and communities.

Last week, members of Congress were preparing to introduce legislation requiring companies to give workers advance warning of plant shutdowns or mass layoffs.

In his address, Bieber blasted U.S. automakers for outsourcing and reducing capacity in the United States while adding plants in Mexico and "going flat-out in Canada."

Bieber said the union plans newspaper and radio advertising during the trade debate.

Keller: GM needs a 'car person'

NEW YORK — Auto industry analyst-critic Maryann Keller says a turnaround at General Motors will be achieved only when GM changes its corporate philosophy and appoints a "car person" to lead the company.

Keller, of Furman, Selz, Mager, Dietz & Birney Inc., did not out-and-out advocate a change in the current GM management, including GM Chairman Roger B. Smith, but she said after a meeting of the International Motor Press Association that new people at the top would help.

She added that GM cannot accomplish a turnaround without a basic philosophical change. GM, Keller said, has not been responsive to customers and dealers.

She suggested that GM should be asking itself why customers are not buying its cars and why GM dealers are seeking other franchises — including the new Sterling, hot among GM dealers, especially Cadillac dealers.

Keller termed the much ballyhooed GM reorganization a failure. She said the reorganization — which placed the car divisions in charge of marketing while two car groups ran production — should have worked, but it did not.

— John A. Russell

Cadillac, Lincoln eye standards for limo converters

By Scott Miner
AUTOMOTIVE NEWS STAFF REPORTER

ATLANTIC CITY, N.J. — Cadillac and Lincoln may impose stricter standards on limousine converters.

If such measures are adopted, the automakers could limit who is allowed to buy vehicles for the purpose of converting them into limousines. The auto companies would decide who gets the nod based on which coachbuilders adhere to those standards.

Converters buy their cars from dealers. At present, the automakers have no control over what happens to the car after it is sold by the dealer.

No formal plans or standards have yet been adopted by either Cadillac or Lincoln-Mercury divisions, the primary source of vehicles for the industry.

However, James L. Centner, president of Moloney Coachbuilders, said his company has been talking with Cadillac and Lincoln for about three years about a "Master Coachbuilder" concept.

Limousine and Chauffeur Show in Atlantic City, N.J.

Moloney is one of the four top limousine conversion companies. Each produces about 1,000 limousines a year, and the four firms account for an estimated 80 percent of the limos built for sale in the United States.

Centner discussed the Master Coachbuilder program with Automotive News at the Limousine and Chauffeur Show here.

Cadillac officials have said their legal department is reviewing the situation before they decide on the next step.

see STANDARDS, page 54

Big-truck sales slip in January

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Medium and heavy-truck sales, with the exception of Class 5, nosedived in January.

However, strong order banks reported by several manufacturers are expected to lift the two segments during the next several months.

On the light-truck side, Chrysler was stunned by the slump in its Caravan/Voyager sales last month.

Some dealers feel that the Chrysler minivans may be suffering the effects of steady price hikes during the past year or so. Buyers also appear to be backing off from the 2.6-liter 4-cylinder-engine minivan models and waiting for the new V-6 which recently became available.

As one dealer pointed out, "If you're going to pay $15,000 for a Voyager, why not pay $15,500 and get the V-6."

At any rate, stronger Chrysler incentives — not only for Caravan/Voyager, but for other truck models — appear to be in the offing.

The industry retailed 295,300 trucks in January, off 14.0 percent from a year earlier.

Class 8 sales, including an estimate of 600 for Peterbilt, totaled 7,960 last month, off 12.7 percent from a year ago.

All Class 8 manufacturers except Peterbilt reported final sales.

Freightliner is one of those manufacturers with a strong order board. It currently has a six-month backlog of heavy-truck orders, according to Chairman Peter Rupp, who described the outlook at the recent Truck Rental and Leasing Association convention in Las Vegas.

Meanwhile, Class 7 sales of 7,168 were off 6.1 percent in January. Class 6 sales of 2,735 were off 19.7 percent from a year earlier.

Class 5 sales of 1,007 were a multiple of the 188 units sold in the category last year, reflecting the increased strength at GMC and the influx of several new importers.

Class 1-3 sales, as previously reported, totaled 276,430, off 14.4 percent from a year earlier.

UPTURN

Sales gain predicted for heavy trucks, but estimates range from a little to a lot

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck manufacturers and analysts are beginning to line up behind predictions of stronger 1987 heavy-truck sales, with the most-optimistic forecasts calling for up to 140,000 Class 8s being sold this year.

In calendar 1986, the industry sold a little less than 113,000 heavy-duty trucks.

Drexel Burnham Lambert Inc. and Volvo White joined Ford and Freightliner in predicting an upturn in Class 8 sales this year.

David Healy, analyst with Drexel Burnham Lambert, admitted that he's "more than a little on the high side" with his 140,000-unit Class 8 projection.

He pointed out, however, that the new-order rate for Class 8s had been running at well over 150,000 units in the second half of 1986 and "a lot of trucks are going to get sold."

The order rate is still very high, according to industry sources, even though January sales don't reflect that.

Normally, it takes three to six months to fill such orders, since many of those trucks are custom-built.

Freightliner currently has a six-month backlog of orders.

Freightliner Chairman Peter Rupp said that if overall industry sales didn't improve within the next few months over January's level his company's projection of 120,000 Class 8 sales is still attainable, but "We'll light have to a few candles in some churches" to achieve it.

Healy said that, after two years of declining sales and earnings, the industry is "kind of shell-shocked" by the recent upturn and cautious in its response to it. He feels that is why manufacturers' forecasts are more conservative than those of his company.

He added that there's been a good increase in the freight, or tonnage, carried by trucks as well as signs of an improving economy.

The American Trucking Associations' index of freight carried by trucks has been a particularly good indicator of the industry's past cycles, Healy added.

The ATA's freight index anticipated the sharp 1979-1980 recession, the aborted 1980-1981 recovery and the renewed recession that bottomed out in November 1982.

The index also anticipated the subsequent recovery that topped out in 1984, a 1984-1985 decline and a recovery that began in the second half of 1985 and strengthened in the second half of 1986, Healy pointed out.

Volvo-White, although revising its 1987 forecast upward a bit, is still looking for only 115,000 Class 8 sales.

Officials at a news media gathering in Greensboro, N.C., said that a tougher emission standard for Class 8 trucks, which had been due to take effect on Jan. 1, 1988, has been deferred until 1991.

That led them to predict that there wouldn't be heavy pre-buying in the third and fourth quarters of 1987, as had originally been anticipated.

Volvo, though, sees moderate interest rates, continued GNP growth of 2-3 percent and moderate inflation boosting the truck market.

Terry Young, director of marketing for Volvo White, also said the new tax law hasn't affected business investments as they relate to truck sales.

"People are finding ways to deal with the new tax law and are continuing to invest (in trucks and truck-related activities)," Young said.

Healy noted that since the investment tax credit really "died" at the end of 1985 (not 1986), and the depreciable life of "road tractors" (comprising most Class 8 trucks) remains at three years under the new tax law, there seemed to be little tax incentive for truck buyers to take delivery before year-end 1986.

Thus, he said, the upturn last year was not a temporary, artificially induced buying spree.

Road tractors can be depreciated for tax purposes at a 200 percent declining balance rate under the new law compared to 150 percent under the old law, Healy pointed out. The tax benefit is continuing and shouldn't create a year-end rush of truck deliveries this year, he added.

How many Class 8s are sold in 1987 also depends on current market shifts.

Ford, like Freightliner, is also anticipating 120,000 Class 8 sales this year.

Ford's projection would have been stronger, except that officials see a continuing shift of Class 8 customers into the borderline Class 7 or "baby 8" trucks, falling just below the 33,001-pound GVW category.

Ford is fairly conservative in its anticipation of Class 6-7 sales, and Drexel Burnham again is more bullish.

The financial institution sees Class 6-7 sales for 1987 increasing to 160,000 from 143,000 last year.

Ford sees Class 6-7 staying on a fairly even keel with last year.

The two segments have been rather erratic, with widely fluctuating sales over the past decade, but now appear to be on a more even, steadily upward, keel.

AUTOMOTIVE WORLD NEWS

What's wrong with Vauxhall?

By Jake Lucas

You already know who Europe's big lossmakers are — Renault, Rover, Alfa Romeo and Citroen, right?

Add to that list the name of General Motors, whose European operation is generally viewed in a much more favorable light despite the buckets of money it loses for its Detroit parent.

Adam Opel AG, the West German subsidiary headquartered in Russelsheim, has lost 1 billion German marks ($550 million at today's rate) in the last five years.

The smaller British subsidiary, Vauxhall Motors Ltd., based in Luton, England, has all but forgotten what making a profit feels like. While accumulating losses of over 300 million pounds sterling — equivalent to about $450 million today — in the past decade, Vauxhall made a profit just once, 2 million pounds in 1978.

What has gone wrong at Vauxhall? As recently as 1985 the company recorded a doubling of market share to 16.6 percent in five years and solid profits were forecast for 1986.

Now market share is down to 15.1 percent and unlikely to rebound to the previous record penetration. The long-awaited profit is not expected until 1988, as 1985 losses of 47.6 million pounds ($73 million) were more than matched last year.

An Opel Kadett/Daewoo LeMans by any other name: Vauxhall Astra.

Claims in 1985 that Vauxhall had left the worst excesses of the discount price war to rivals Ford Motor Co. and Austin Rover sounded reassuring, but in reality the company lost the equivalent of $240 on every car it sold.

Beneath all the sales gloss, Vauxhall was struggling with new and old problems at the Luton and Ellesmere Port plants that produce the Cavalier and Astra models, respectively.

In 1985 management was trying to make the best of production while in the thick of a 15-month run of 160 strikes and walkouts that cost 1.4 million working hours and over 18,000 lost cars.

If the Detroit GM chiefs had not enjoyed the luxury of importing cars from more efficient factories in Belgium, West Germany and Spain, they may have been forced to knock Vauxhall plants into shape earlier. They are now paying the price for not having done so.

In the same year, Vauxhall introduced the new Astra (Opel Kadett) at Ellesmere Port, using many manufacturing concepts that GM said were for the futuristic Saturn project in the U.S.

Unfortunately, there were considerable teething problems as equipment suppliers found their machinery talked different computer languages than Vauxhall's. The trade unions became suspicious, believing management was quite happy to miss production targets and import more cars.

Against the background of continuing financial losses, Ellesmere Port saw a promised $150 million paint facility put on the back burner for up to three years.

Last year's 25-percent strengthening of the deutschemark against sterling compounded Vauxhall's problems. It found itself badly exposed to a currency shift that GM experts believe is here to stay.

With the rest of Europe supplying almost half the parts — engines, transmissions, body stampings — for the United Kingdom-assembled models, and over 70,000 built-up Vauxhall-badged cars for the British sales network, a one-pfennig rise in the exchange rate was costing Vauxhall 1 million pounds.

GM officials in Detroit had erred badly, and knew they had no option but to make the manufacturing operation in Britain cost competitive. It had to build more cars in the U.K. and import fewer.

Ford has reached the same conclusion. It expects to push up U.K. production 20 percent by 1989, a revelation for the Halewood and Dagenham plants that have for years failed to meet even lowly production targets.

The added incentive is caused by the presence of the Japanese in Britain. By 1991 Nissan will be making 100,000 Bluebirds at its Sunderland plant.

Rivals already estimate Nissan can make cars for up to $750 less than they can. That isn't hard to believe when it's realized that Vauxhall has yet to curb absenteeism of 12 percent, while Nissan claims only 2 percent.

In a plant that will make engines, stamp body panels, make plastic moldings and assemble cars, Nissan will employ up to 2,700 people and produce up to 100,000 vehicles annually.

Vauxhall does little more than assemble 220,000 cars a year with more than 9,000 workers.

Vauxhall may not be alone with these problems. But it is easy to see why it is cutting its workforce by 1,000 and is hoping for a 25-percent reduction in costs over the next three years.

GM chiefs may want concrete evidence of cost-cutting before handing over the $150 million needed to relieve production bottlenecks and allow output to rise to 280,000 cars a year.

Opel is no disinterested bystander in all this, since it means its West German plants and affiliates will ship fewer cars to Britain. Indeed, Vauxhall will export 10,000 cars this year.

On top of that, setting up GM Passenger Cars-Europe headquarters in Zurich is expected to result in component contracts being taken away from Opel's traditional suppliers and spread around the rest of Europe — including Britain — with the aim of saving money. ■

WORLD NEWS BRIEFS

Taiwan buys from Scania

Scania Division, Saab-Scania AB, Sweden, receives an order for about 100 bus chassis from Taiwan. Manufactured by Scania-Bussar, Katrineholm, Sweden, the chassis will be delivered during 1987, with coachwork to be installed locally. The buses will be run on intercity routes by several Taiwanese operators.

Reliant reports loss

Reliant Motor P.l.c., Great Britain, returns to profitability in the second half of its fiscal year ended Sept. 30, but reports a loss for the full year. The producer of the Scimitar sports car and Rialto three-wheel vehicle earned the equivalent of $36,480 before taxes in the last half. Reliant finishes $260,000 in the red for the year compared to a $986,500 loss the previous year.

Perkins catches DROPS

Perkins Engines receives a $15.2 million order from the British Army for more than 2,000 Eagle MX diesel engines for a new breed of ammunition-carrying vehicles known as DROPS. The engines will be installed in Foden and Scammell trucks, with deliveries expected to begin in 1988.

Rover sells parts company

British government-owned Rover Group sells 78.33 percent of Unipart, its car parts and accessories company, to a consortium of management and institutional investors led by Charterhouse Bank. Unipart's 4,000 employees will be able to buy 12 percent of the company's ordinary shares under the agreement. Rover Group received $45.6 million in cash immediately from the consortium. It will be paid an additional $22.8 million if Unipart achieves an undisclosed profit level, and another $10.6 million if and when the partsmaker sells stock publicly.

Car sales in South Africa

Note: Alfa, Daihatsu, Fiat, Renault and Peugeot ceased production in 1985

Hungary for used cars

A Hungarian company is formed under government auspices to import up to 1,500 used Volkswagen, Audi, Ford and Opel cars from West Germany. The decision to import second-hand cars is prompted by a car shortage in Hungary caused by the increasing amount of Soviet Lada and Czechoslovakian Skoda production being sold in Western countries. Hungary will buy cars up to three years old and with no more than 50,000 kilometers, using a combination of hard currency and Hungarian forints. Deliveries begin this spring.

DAF profits climb

DAF Trucks, the Netherlands, reports a 62-percent increase in profits in 1986 to $15.6 million, the company's best year since 1980. DAF, which posted a $12.6-million loss in 1983, cites 1986 deliveries of 16,003 vehicles, 13 percent higher than 1985.

Cosworth names directors

Cosworth Engineering, the United Kingdom, appoints two new directors, Michael Hall and Richard Scammell. Hall is in charge of designing production engines, including the Mercedes 2.3-liter 16-valve powerplant and Sierra Cosworth engine. Scammell heads Cosworth's motorsports division.

Bridgestone sets up sub

Bridgestone Corp. establishes a French sales and marketing subsidiary, Bridgestone France S.A.R.L. Headquartered in Les Ulis, Bridgestone France is responsible for selling and distributing Bridgestone car, light truck, truck, motorcycle and off-road tires through an independent dealer network in France. Previously, Bridgestone tires were sold through the *Bureau de Marketing et Services S.A.R.L.*, a subsidiary of Mitsui & Co. Europe SA. In December, Bridgestone Corp. bought 80 percent of the *Bureau de Marketing et Services*. The remaining 20 percent is owned by Mitsui.

Bosch big on ABS

Robert Bosch GmbH, West German auto parts giant, will spend 220 million deutschemarks to build a new plant in Ansbach, West Germany, for production of anti-lock braking system components. Bosch, which introduced anti-lock braking in 1978, plans to produce 1.1 million ABS units in 1987, up from 600,000 last year.

Hertz buys heaps of Fords

Hertz of the United Kingdom places an order for 11,000 Ford cars to be delivered in 1987. The buy accounts for about 65 percent of the Hertz subsidiary's 1987 orders, and represents some $100 million at retail prices.

AEM makes Scout

A new British firm, Automotive Engineering and Manufacturing, is formed to produce a Mini-Moke replica called the Scout. AEM gets financial backing from the Welsh Development Agency to build the open-top four-seater — with Austin Rover 998cc engine and Austin Mini transmission — at a factory in South Wales. Production is due to start early this year at the rate of 30 a month, with 24 employees.

Croma beats out Omega

Fiat Croma is voted 1986 Imported Car of the Year by Spanish auto journalists. It edges out Opel Omega, European Car of the Year, in the annual competition organized by Cadena Catalana Radio in conjunction with *Federacion Catalana De Automovilismo* and the mayor of Barcelona.

HYUNDAI

Continued from page 33

Yet there is nothing about the Ulsan plant that is technologically state-of-the-art. Machine tools, material handling systems and production technology are just like the cars they make — utilitarian products of well-proven technology.

Indeed, it is significant that Hyundai managers decided to transfer all production of export model Excel subcompacts to old parts of the Ulsan plant. The newly completed 300,000 vehicle-a-year factory is used for production of Pony subcompacts and Stellar and Grandeur compacts for the Korean market.

Hyundai managers privately admit they are still on a steep technological learning curve, and are not prepared to take risks with the most prestigious products they make.

As a result, there is no wizardry at Ulsan. It is basically a collection of unspectacular production equipment handled by exceptionally disciplined and dedicated workers. The Japanese-trained production engineers squeeze the most out of their machines and the production staff is motivated to work hard.

The really distinctive aspect of Hyundai's rapid success lies in the sense of national purpose behind the project. The Hyundai group of companies accounts for 5 percent of the gross national product of Korea. The decision of its founder, 71-year-old Chung Ju-Yung, to make it big in autos is backed by an extremely nationalistic political and business community. On a local level, Hyundai firms support around two-thirds of Ulsan's 600,000 people.

Hyundai Motor buys its steel from Pohang Iron and Steel Co., just up the coast from Ulsan, and its paint and much of its aluminum from Hyundai subsidiaries.

The Hyundai shipyard made the 10 car carriers — with a capacity ranging from 1,200 to 4,800 cars each — which ship Excels to five ports in North America.

Critics wonder whether that fierce independence is the best course. Some speculate that the strategy of Korea's two other major automakers — Daewoo Motor Co. Ltd. and Kia Motors Corp. — to rely more heavily on their multinational partner — General Motors and Ford Motor Co., respectively — might not finally prove more effective.

Perhaps. But in the short term Hyundai is gearing up to boost 1987 output 43 percent over 1986. Few doubt they will meet the production target of 600,000 vehicles.

It's all causing plenty of late nights for Hyundai Motor's 4,500 marketing and administrative staff people based in Seoul, and its export managers around the world.

It may also explain why workers at Ulsan have set up fish tanks throughout the factory to provide a calming influence in their frenetic workplace. ■

PRODUCTION

Millionth car trails '86

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers built their one-millionth car of the year last Monday (Feb. 16), four days behind the pace of 1986.

So far this year, 1,157,256 cars have been assembled, 9.53 percent below the 1,279,102 completed last year at this point.

Last week's targeted production of 168,887 cars was 4.08 percent below the previous week's 176,062 and 4.08 percent below the year-ago week's 176,065.

Companies split last week's scheduled production as follows: General Motors, 51.92 percent; Ford Motor Co., 25.89 percent; Chrysler Motors, 13.44 percent; Honda of America Manufacturing Inc., 4.19 percent; New United Motor Manufacturing Inc., 2.37 percent; Nissan Motor Manufacturing Co. U.S.A., 1.73 percent; and American Motors, 0.46 percent.

Volkswagen of America's plant in Westmoreland, Pa., was down last week for installation of new parts. The plant resumes output today (Feb. 23).

GM has further increased its number of indefinite layoffs by 3,500, to 37,000. Of the latest layoffs, 2,000 are at the Leeds, Mo., plant. That cutback was announced previously announced by GM.

The other 1,500 are a result of previously reported scheduled adjustments at various GM assembly and components plants.

GM has extended the downtime at the Arlington, Texas, plant. The plant has been down since early January for installation of paint equipment and is not expected to resume output until March 2.

GM's Linden, N.J., and Wilmington, Del., plants were slated for Saturday (Feb. 21) overtime.

Ford scheduled Saturday overtime at its Chicago and Dearborn, Mich., plants.

Daily overtime is slated at all Ford car plants this week.

Saturday overtime was scheduled for the following Chrysler plants: Newark, Del.; Sterling Heights, Mich.; St. Louis (No. 1); and Belvidere, Ill.

Daily overtime is slated this week at Chrysler's Sterling Heights and Newark plants.

Truck output retains 1987 lead

U.S. truck production is maintaining a slim lead over the 1986 year-to-date total.

So far this year, 544,187 trucks have been assembled, 2.92 percent more than the 528,734 built last year at this point.

Last week's estimated production of 77,625 was 4.81 percent below the previous week's 81,544 but 5.83 percent more than the year-ago week's 73,349.

General Motors slated Saturday (Feb. 21) overtime at its Baltimore plant.

Ford Motor Co., scheduled Saturday overtime at three plants: Wayne, Mich.; Kansas City, Mo.; and St. Louis.

All Ford plants are slated for daily overtime this week (Feb. 23).

Chrysler Motors' Warren, Mich., plant is scheduled for daily overtime this week.

Car production slips in Canada

Last week's scheduled Canadian auto production of 21,024 was 2.75 percent below the previous week's 21,619 and 7.87 percent below the year-ago week's 22,819.

Year-to-date, 137,231 cars have been built, 9.51 percent below the 151,658 completed last year at this point.

Estimated truck production of 18,215 units last week was 8.47 percent more than the previous week's 16,792 but 5.01 percent below the year-ago week's 19,175.

So far this year, 113,413 trucks have been assembled, 18.33 percent below the 138,871 built last year at this time.

Monthly estimates may contain error of one or two units due to rounding.

OUTPUT

FROM PAGE 1

schedule is just too heavy, he said.

All domestic makers except Honda of America Manufacturing Inc. and Nissan Motor Manufacturing Co. U.S.A. reported second-quarter estimates that are lower than 1986 production.

Ford expects to build about 433,000 cars during the second quarter down 12.87 percent from 496,955 in 1986.

Healy believes that Ford's forecast may be a bit light and the company may end up adding some cars to the total.

Beale commented, "Ford's first quarter is very strong from year to year so it's not really a surprise that the schedule is weaker in the second quarter. It is a part of their marketing strategy and so by the end of the first half they should come out about even."

Chrysler Motors' scheduled 279,000 units in the second quarter, 20.78 percent below the 352,168 it built in 1986.

Chrysler's Belvidere, Ill., plant will be down for retooling during the second quarter, knocking out the sole source of Omni and Horizon, and its St. Louis (No. 2) plant will be assembling the Caravan and Voyager mini-vans instead of the Gran Fury, Diplomat and Fifth Avenue. The minivans are counted as trucks, not cars.

Gran Fury, Diplomat and Fifth Avenue will be moved to American Motors' Kenosha, Wis., plant, which will not be producing at full capacity in the second quarter.

AMC's estimated second quarter output of 9,850 cars is 38.59 percent below the 16,040 assembled during the same period of 1986.

New United Motor Manufacturing Inc. plans to build about 52,000 cars at its plant in Fremont, Calif., 5.66 percent below the 55,121 it assembled in the second quarter of last year.

Honda scheduled 84,455 cars during the second quarter, 62.82 percent more than the 51,871 built in 1986. The increase is due primarily to the addition of a second line at Marysville, Ohio, that assembles Civic as well as Accord.

Nissan plans to build 36,256 cars at its Smyrna, Tenn., plant during the second quarter. The plant was down for model changeover during the second quarter of 1986.

Volkswagen of America's output at Westmoreland, Pa., is estimated at 24,800 for the second quarter, down 3.60 percent from 25,726 last year.

Fix of Chrysler plant includes paint dept.

Chrysler Motors is expected to begin construction within the next month on a paint facility at its Jefferson Avenue assembly plant in Detroit.

The construction is the beginning of Chrysler's $1 billion renovation of the plant, which is expected to be completed by the summer of 1991.

The paint facility will be used as part of the existing plant until completion of the new complex.

The Detroit City Council last week unanimously approved plans for the project.

Casco gets Ford contract

BRIDGEPORT, Conn. — Casco Products here has signed to be sole supplier of cigarette lighters for Ford Motor Co. vehicles through model year 1992.

Best $eller: *Hyundai shatters sales per dealer mark*

By David Versical and Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTERS

Hyundai Motor America added another chapter to its first-year success story, rewriting the sales-per-outlet record book with a dramatic 1,431 car sales per dealership in 1986 and producing some of the highest profits in history.

Hyundai sold more than twice as many cars per dealer as the next highest-selling make — Honda. Hyundai even exceeded by more than 50 percent the average of the top dealer organization selling both cars and trucks — Toyota.

It was all part of an import surge that claimed the top six places in the annual Automotive News ranking. But Hyundai was far and away the star.

The performance is even more remarkable in light of the fact that the Korean subcompact didn't go on sale in the United States until Feb. 20, 1986.

Perhaps nobody was more surprised by the results than the people at Hyundai. The architect of Hyundai Motor America's U.S. marketing plan, Executive Vice President Max Jamiesson, said he expected Hyundai would need 200 dealers to sell 150,000 cars. As it turned out, Hyundai sold 168,882 in 1986 with a dealer force that grew from 75 in February to just 161 at year end.

They made money, too. Hyundai dealers netted an average of $700,000 in profits last year. One of its volume leaders sold well over 2,000 cars and earned $1.7 million. In an industry where a 3 percent return on sales is considered respectable, Hyundai dealers

Air-bag Fords lure only 749 retail customers

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co.'s 1987 Tempo/Topaz air-bag option, far from being the marketing bonanza some expected, is facing widespread dealer resistance and consumer disinterest.

The problem reached such proportions that two weeks ago a select group of dealer council members and National Automobile Dealers Association Ford and Lincoln-Mercury line officials met with company officials to discuss ways to improve public acceptance of the air bags.

And the problem was obvious. As of Feb. 20, nearly five months into the 1987 model year, Ford dealers had sold just 455 air-bag-equipped Tempos to retail customers, while L-M dealers had retailed only 294 air-bagged Topaz cars. In the same period, the company sold more than 100,000 non-air-bagged Tempo/Topaz models.

There is a total projected build of 10,000 Tempo and 2,000 Topaz air-bagged units for the 1987 model year.

Of those 12,000, Ford says 7,844 already are accounted for in sales, orders, inventory or in-transit vehicles. To date, 6,195 have been built. Thus the 749 retail deliveries represent 12 percent of production.

In addition to the 749 retail deliveries, there have been 1,642 fleet sales.

Currently, there are 2,833 air-bagged cars sitting unsold in dealer inventory — an amount equal roughly to a 1½-year supply, based on the model-year-to-date selling rate.

The irony is that while the Ford air-bag option seems to be floundering in the marketplace, a recent telephone study conducted on behalf of NHTSA found that the American public is "very aware of and expresses a strong preference for air bags" over passive-belt systems — something different than Ford's sale of air-bagged cars would indicate.

According to a dealer who attended the Dearborn meeting to discuss the air-bag acceptance problem, the management firepower present included Ford and Lincoln-Mercury division general managers; Helen O. Petrauskas, environmental and safety engineering vice president; and Ford President Harold A. Poling.

"They told us about their long-range plans for the air bag," said one dealer who attended the meeting, "but there is no big marketing push coming, and that's what we need."

The dealer said the session included an airing of dealer air-bag concerns, like general safety unsaleability, a too-high $815 manufac-

Third World 'get rich' deals require caution

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

Nameplate proliferation, while providing a dizzying array of business opportunities for dealers, also has a down side — the potential for costly failures and, even worse, out-and-out misrepresentation.

Dealers intent on finding the next Hyundai could instead find themselves saddled with a successful-sounding franchise that in reality is a dud.

With franchises being offered today from a half-dozen Third World countries — from Romania to Malaysia, from India to Taiwan — it's important to consider what industry experts think are the key issues in such franchise-shopping.

"When evaluating a new franchise, I think you have to look at who is financing the operation," said J. David Power, head of the

U.S. fights to grab Geneva spotlight

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GENEVA — The focus of attention at this week's 57th international auto show here could be renewed interest in the European market among U.S. manufacturers.

The decline of the dollar against most European currencies presents new opportunities for U.S. exports. But the more important factor may be that Americans now have things to offer finicky European buyers.

For example, the Chrysler minivan, American Motors' stellar Jeep lineup and the Ford Taurus station wagon could find niches — albeit low volume — in Europe.

American manufacturers are planning to be here in force. Chrysler will reveal some of its marketing plans for Europe; AMC is expected to announce an expansion of its Jeep offerings; and Ford has talked of sell-

White House urges repeal of CAFE laws

By Matt DeLorenzo and Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTERS

WASHINGTON — Commerce Secretary Malcolm Baldrige says the Reagan administration proposes to end the Corporate Average Fuel Economy (CAFE) standards as part of its recently announced trade and competitiveness package.

The White House will ask Congress to delete all future passenger-car and light-truck CAFE standards on grounds that they distort the market and pose "special difficulties for U.S. full-line manufacturers," Baldrige said.

"The president has proposed repeal the Corporate Average F Economy standards," Baldrige said in testimony before the Senate Committee on Commerce, Science and Transportation. The committee, chaired by Sen. Ernest F. Holl-

Petersen sounds warning at SAE

Manufacturing isn't un-American, Ford chairman emphasizes

By Al Fleming and Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — The 1987 SAE International Congress & Exposition at Cobo Hall was a record-smasher in every respect.

According to SAE officials, 36,200 attended the five-day event which ended last Friday, setting a new mark for attendance. The event also set records for number of exhibitors, exhibit space, number of sessions, publication sales and new-member applications.

A full-house annual banquet audience, 5,100 strong, heard Ford Motor Co. Chairman Donald E. Petersen offer engineers a dash of praise and a bit of warning.

Amid applause, he said Detroit has made great strides in recent years in product design, quality and productivity. But, he said, a trend toward acceptance of the notion that manufacturing is un-American is a serious threat.

The show reflected the increasingly global nature of the auto industry. Some 20 percent of the exhibitors were from overseas, and major speeches and press conferences abounded with international topics.

Robert J. Eaton, General Motors vice president and group executive in charge of Technical Staffs, set the tone in his keynote address.

"Competition is no longer national in scope," he said. "Its dimensions are global. Competitive rivalry is no longer just between companies. It's between countries, systems, approaches and outlooks."

Calling for "new perspectives" on the part of U.S. companies, he said, "The United States traditionally has looked inward, while other nations were forced to depend on international commerce for their prosperity and even their survival. Global competitiveness must now be the watchword for our decisions and actions."

Another thing that must change, according to Eaton, is where U.S. companies put their emphasis.

"In America, we glorify the people on the front end of the product cycle — inventors and designers. People involved in manufacturing and productivity don't get the same recognition.

"Our competitors glorify the people who create productivity solutions. They understand the link between productivity and world competitiveness, and the link between competitiveness, jobs and their standard of living."

Eaton called for a "clean sheet of paper approach — not just in the design studio or on the factory floor, but in every office, in every union hall and every government building."

Noting that U.S. management, labor and government have different goals and interests, Eaton said, "Management's ultimate objective is return on stockholders' equity, labor's is jobs and the government's is a rising national standard of living.

"By recognizing the legitimacy of the others' goals, each of the three makes it possible to achieve its own.

"None can succeed alone. None will succeed unless all succeed."

At a press conference, Sir Godfrey Messervy, chairman of Lucas Industries PLC in in Great Britain took the Japanese to task.

He said it would be "very damaging" if the Japanese were permitted to establish new assembly facilities in Europe and the United States "while importing the majority of their higher added-value systems from their associated Japanese suppliers and purchasing locally only low value-added parts."

Sir Godfrey suggested that in order to qualify as "European products, cars made in Japanese-owned factories in Europe should be at least 80 percent European Community content."

He said, "This content should not be measured, as it is today, by ex-factory value, which can include marketing and distribution costs, but by the actual cost of

Mitsubishi to add U.S. dealers, staff

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

FOUNTAIN VALLEY, Calif. — Mitsubishi Motor Sales of America is reorganizing its sales, service and parts operations, expanding its field staff and adding dealers to prepare for the late-1988 opening of a U.S. assembly plant.

But equally important to Mitsubishi is positioning for what it considers to be the key battleground of the late 1980s — being the megadealers' favorite franchise.

The reasoning, as outlined in an interview by Robert Stallsmith, Mitsubishi vice president of sales, is that most manufacturers will be so close in terms of overall quality, design and price by the end of the decade that the biggest differences will be in the dealership networks.

The emergence of the megadealer or multiple-franchise dealer has been a fact of life for Mitsubishi Motor Sales of America since it was established in 1982. About 95 percent of MMSA's 152 dealers have competing-brand franchises.

For Mitsubishi, the goal is to become the biggest, most profitable franchise a megadealer handles so he will give Mitsubishi more attention, Stallsmith said.

"You're fooling yourself if you expect a 10-franchise dealer will personally run your shop," he said. "So we always want to know the general managers, too. And the way to get the best managers a megadealer has is to be his most profitable franchise."

Mitsubishi has worked under the cloud of the export quotas that restricted the availability of cars from Japan, but it chose to keep dealer volumes high rather than push for full national representation.

One key to expansion is the availability of 30,000 more cars a year. This month, Mitsubishi will introduce the Precis (it rhymes with "thesis"), a car assembled by Hyundai.

Precis will be a Mitsubishi-badged version of the Hyundai Excel, which is itself a one-generation-old version of the Mitsubishi Mirage produced by MMSA's Japanese parent, Mitsubishi Motors Corp. The three-door, four-speed-manual base model at $5,195 will match Hyundai's base price.

"Precis allows us to attract the kind of dealer we want for the future when we have U.S. sourcing, not only by giving us more volume, but because we now have an entry-level car," Stallsmith said.

Mitsubishi has added 62 dealers in the past 14 months and expects to have 160 sales points by the end of 1987, he said.

Stallsmith

Lepley

The next stage of dealer growth will coincide with the opening in late 1988 of the Diamond-Star plant in Bloomington, Ill. The joint venture between Chrysler Motors and Mitsubishi Motors Corp. will have capacity to assemble 120,000 cars a year for each partner.

MMSA plans to have 325 dealers by 1990 and sell about 300,000 cars and trucks a year, Stallsmith said. He projected sales of 90,000 imported trucks, 120,000 Diamond-Star cars (roughly half Cordia-class four-doors and half sporty two-doors), 30,000 cars from Korea and 60,000 Japanese imports. The Japanese import figure is up 9 percent from 1986.

MMSA has made several changes to prepare for that growth.

Stallsmith will be working more directly with Diamond-Star. He retains the national sales manager portion of his official title and continues to report to Richard Recchia, MMSA executive vice president and chief operating officer.

Rick Lepley, formerly Eastern regional director, becomes general sales manager, a new post, reporting to Stallsmith.

Lepley will be succeeded as Eastern regional director by Donald Lavin, previously dealer placement manager for the Eastern region. Stallsmith, Lepley and Lavin have been with MMSA since 1982.

Mitsubishi also is reorganizing and adding to its field organization in some unconventional moves that run counter to trends toward centralization and thinning of field staffs.

During the next five months, MMSA will realign district offices so that each has a team of three managers — sales, service and parts — and each serves the same set of 12 or 13 dealers.

That is a substantial reduction in the number of dealers each manager will handle. The policy is part of MMSA's strategy of becoming the megadealer's favorite franchise.

The field reorganization starts this week in San Francisco and Florida regions and will be completed by the fall of 1988.

UAW to step up salaried-worker recruitment

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The UAW has taken steps to capitalize on what it says is a more favorable climate for organizing salaried employees both outside and within the auto industry.

The UAW will create three new occupationally linked councils under its Technical, Office and Professional Department to advance organizing and bargaining programs.

The union also established a new department to carry on the existing programs of its District 65 affiliate, which has been successful in organizing small units. District 65 represents salaried employees at firms such as Harper and Row and the Village Voice; university employees; and salaried and production workers at Revlon Inc.

In addition to its existing Academic Council, the UAW will establish a Public Employee Council with representatives from governmental bargaining units under UAW contract.

The union will establish a Private Employee Council. This group will comprise delegates from salaried, office and technical groups at firms including auto companies. Newly organized groups from industries such as banking and insurance will be included.

A Health Care Council will be formed, including UAW-represented employees of Blue Cross/Blue Shield and other non-profit firms.

Referring to salaried workers in the auto industry, a UAW spokesman in Detroit said, "The problem is in the past we have been used by groups of salaried people who bring us in as a bogeyman when they have a fight. We've always tried to be helpful and available, but often the employees are not fundamentally committed" to representation.

The UAW represents about 10,000-12,000 salaried clerical and technical employees at auto firms, the spokesman said, "with the lion's share at Chrysler Corp."

Citing the better climate for organizing other salaried employees, he said, "There are a lot of educated people coming out of school or who are on the job market for a long time. Employers can exploit this oversupply, as in the day care industry," where workers get minimum wages and few benefits.

Chrysler, UAW extend Newark pact deadline

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors and UAW Local 1183 at its Newark, Del., assembly plant have extended until June 19 a deadline to reach a new labor agreement that is necessary to ensure the plant's future.

Chrysler had said it would withhold future product from the plant if a "modern operating agreement" was not reached by March 4. In February, members of Local 1183 rejected Chrysler's request to negotiate a new pact.

A second vote now will be held on reopening the local contract, which expires in September 1988.

The Newark plant has been scheduled to begin making Chrysler's A-cars in late 1988. The A-cars will replace the K-cars now assembled in the plant.

Local 1183 officials declined comment. But George Smith, regional director of UAW Region 8, said he is "confident" Local 1183 will authorize negotiation of a new contract in a second vote.

Following the first vote, a petition drive was launched in the plant, seeking reconsideration.

Smith blamed the initial defeat on lack of time needed to explain the issues to the union membership. Chrysler set the March 4 deadline in a Jan. 15 letter to the union.

"We went back to the company and told them their approach was less than desirable," Smith said. "Both sides are willing to reconsider."

Prior to the reconciliation, UAW Vice President Marc Stepp, director of the union's Chrysler department, reportedly wrote two letters to company executives and accused Chrysler of interfering in internal union elections.

Stepp claimed that Chrysler was trying to interfere by pushing for negotiation of a new agreement before election of local union officers in May.

Following the union's refusal to reopen the contract, the company said it was accelerating a study to seek an alternate assembly site for the A-car. It also halted all facility construction and training that were underway in Newark in preparation for the A-car.

A Chrysler spokesman said the company will commit A-car assembly to the Newark plant if a new agreement is ratified.

Chrysler employs 4,300, including 3,800 hourly workers, at the Newark plant. The plant was built in 1952.

Smith said negotiations are likely to include discussion of fewer job classifications, pay-for-knowledge compensation, team production and the number of union representatives.

Chrysler has sought new labor agreements at several of its plants during the past year, citing an effort to obtain efficiency and productivity gains.

Permitting a second vote at Newark is not unprecedented. In August, Chrysler agreed to a second-chance vote on a new agreement at its Trenton, Mich., engine plant. Approval of the contract averted a plant phase-out.

Chrysler minivans to offer Mitsubishi V-6

Dodge Caravan, Plymouth Voyager and Dodge Mini Ram Van soon will be available with a new optional 3.0-liter V-6 engine which has a suggested retail price of $600. It is available only with an automatic transaxle. The engine, manufactured in Japan by Mitsubishi Motors Corp., provides 140 horsepower at 4,800 rpm with 170 pounds-feet of torque at 2,800 rpm. The V-6 increases the minivans' towing capacity to 2,750 pounds.

Automaker profits decline 6% for 1986

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — U.S. automakers' combined 1986 profits were down from 1985's although sales set an industry record.

Sales for General Motors, Ford Motor Co., Chrysler Corp. and American Motors totaled $191.6 billion in 1986, up 10 percent from 1985's $174.4 billion, the previous record.

Combined profits totaled $7.5 billion, down 6 percent from 1985's $8.0 billion mainly because of AMC's loss and significantly lower GM earnings.

For the fourth quarter, sales again were higher than the year-ago period while profits were off substantially. Combined fourth-quarter sales totaled $48.7 billion, setting a new fourth-quarter record. Sales were up 8 percent from $45.2 billion in the fourth quarter of 1985.

Profits dropped 32 percent to $1.5 billion compared with $2.2 billion in 1985.

For the year, GM reported a profit of $2.9 billion, down 28 percent from 1985's $4.0 billion. Sales for the year were a record $102.8 billion, up 7 percent from $96.4 billion in 1985.

For the fourth quarter, GM's earnings were $382 million, a 71 percent drop from $1.3 billion in the fourth quarter of 1985. It was GM's lowest fourth-quarter profit since the recession year of 1982.

Ford, meanwhile, outearned GM for the first time since 1924. Ford reported 1986 profits were $3.3 billion, up 32 percent from 1985's $2.5 billion, surpassing the previous record of $2.9 billion earned in 1984. Sales for 1986 were a record $62.7 billion, up 19 percent from $52.8 billion in 1985.

For the quarter, Ford earned $785 million, up 9 percent from $720 million in the year-earlier quarter. It was Ford's best-ever fourth quarter. Sales for the quarter were a record $16.3 billion, up 16 percent from $14.1 billion in 1985, the previous record.

Chrysler reported its third-best year for profits on record sales in 1986. Earnings for the year were $1.4 billion, down 13 percent from $1.6 billion in 1985. Sales were a record $22.6 billion, up 6 percent from $21.3 billion in 1985, the previous record.

For the fourth quarter, Chrysler came within $58 million of matching GM's fourth-quarter earnings. Chrysler profits for the quarter were $324 million, up 51 percent from $215 million in the year-earlier fourth quarter. Fourth-quarter sales were a record $5.9 billion, up 9 percent from $5.4 billion in 1985.

AMC reduced its full-year loss in 1986 by turning a profit in the fourth quarter. For the year, AMC lost $91 million, an improvement from a $125 million loss in 1985, though sales were lower. Sales for the year were $3.4 billion, down 15 percent from $4.0 billion in 1985.

AMC earned a profit of $20 million in the fourth quarter, its first quarterly profit in two years. That compared with a loss of $7 million in the fourth quarter of 1985. Sales for the quarter were $938 million, down 17 percent from $1.1 billion.

AUTO MAKERS' SALES, PROFITS (In millions)

	1986 Sales	1986 Profit (Loss)	1985 Sales	1985 Profit (Loss)

Saturn dealers near; name change eyed

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Saturn Corp. will begin appointing dealers by late spring or early summer while executives of General Motors' newest division contemplate a change in the firm's name.

Donald W. Hudler, Saturn vice president of marketing, sales and service, said the company will outline the process by which dealers will be selected within the next 90 days and announce the selection of some dealers shortly thereafter.

Saturn President Richard LeFauve said last fall that the first Saturn dealers will be located in areas where imports are strong.

In the meantime, Saturn executives will consider changing the name of the auto division.

Last September, Saturn Corp. was slapped with a lawsuit when it tried to register the name as a federal trademark. Saturn Tire & Rubber Co., a tire distributor in Bloomington, Ill., is asking for all profits GM derived from its use of that name.

GM's Saturn made an undisclosed counter offer to Saturn Tire & Rubber Co. after the suit was filed but it was not accepted. The case is pending.

Hudler, who was appointed to the Saturn post Feb. 1, said it was a "prudent time" to review alternative names. Saturn executives are now mulling possible names though no deadline has been set for a decision.

The Spring Hill, Tenn., Saturn plant will initially produce 200,000 to 250,000 cars annually, beginning in the summer of 1990.

Corsica holds up best in Insurance Institute bumper test

HOW MUCH A CRASH COSTS

Car	Front into barrier	Rear into barrier	Front into angled barrier	Rear into pole	Total Damage in All Tests
Chevrolet Corsica*	$40	0	$204	$175	$419
Toyota Camry	67	0	274	525	866
Buick Skylark	0	0	795	229	1,024

Oldsmobile Calais	216	35	733	397	1,381
Chrysler LeBaron GTS	199	113	765	453	1,530
Mercury Sable GS	0	0	459	1,112	1,571
Plymouth Reliant LE	127	284	488	718	1,617
Chevrolet Celebrity	350	265	639	365	1,619
Chevrolet Cavalier	25	248	976	406	1,655
Oldsmobile Ciera	0	0	836	868	1,704
Buick Skyhawk	134	0	560	1,017	1,710
Pontiac Grand Am	79	120	847	703	1,749
Chrysler LeBaron	208	211	247	1,206	1,872
Dodge 600	261	332	888	403	1,884
Ford Taurus GL	0	0	527	1,418	1,945
Buick Century	204	73	859	860	1,996
Pontiac 6000	55	88	822	1,039	2,004
Honda Accord DX	0	0	830	1,200	2,030

The damage repair costs to 1987 midsize four-door cars were estimated following 5 mph crashes. They are rounded to nearest dollar. Estimates were prepared in February 1987, by two independent damage appraisers using ADP Collision Estimating Services with a labor rate of $25 per hour. Criteria for bumper face bar damage were adapted from the U.S. Department of Transportation Part 581 Bumper Standard in effect Sept. 1979-July 1982.
*1988 model
Source: Insurance Institute for Highway Safety.

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The 1988 Chevrolet Corsica showed the least damage of 22 mid-sized cars when bumper performance was tested at 5 mph.

The tests were conducted by the Insurance Institute for Highway Safety.

Total repair cost for the Corsica was $419 following four tests: front- and rear-end impact into a flat barrier, front-end impact into an angled barrier and rear-end impact into a pole. That compared with $2,030 for repairs when the tests were performed on a 1987 Honda Accord DX.

Only one other car sustained less than $1,000 worth of damage in the four crash tests. The Toyota Camry's damage was $886.

The IIHS data showed six cars sustained no damage during front- and rear-end barrier tests. They were the Buick Skylark, Oldsmobile Firenza, Mercury Sable GS, Oldsmobile Cutlass Ciera, Ford Taurus GL and Honda Accord DX.

Repair costs to four other cars in the same test were: Pontiac Sunbird, $13; Chevrolet Corsica, $40; Chevrolet Cavalier, $53; and Toyota Camry, $67.

At the other extreme, the Chevrolet Celebrity ($615) and the Dodge 600 ($593) sustained the most damage of the 22 cars during front- and rear-end tests.

As late as 1982 models, NHTSA required no damage in 5-mph impacts (except for a dent on the bumper face) for front and rear bumpers.

But one of the Reagan administration's first auto industry deregulation actions was to reduce 5-mph front- and rear-bumper protection into flat barriers, and 3-mph corner pendulum impact, to 2.5 mph and 1.5 mph, respectively.

Because energy rises exponentially, not arithmetically, a 5-mph requirement is four times as stringent as 2.5 mph, and 3 mph is four times as forceful as 1.5 mph.

IIHS noted that all 22 cars suffered front damage during testing into an angled barrier. Eight had more than $800 worth of damage.

All sustained damage in the rear-end/pole test — a test that was not included in the safety agency's test procedures. Six cars sustained more than $1,000 damage in that test.

Ford Motor Co., which was the leader in the original bumper protection action at NHTSA, has retained its 5-mph front- and rear-bumper strength.

Robert H. Munson, director of Ford's automotive safety office, said the "best evidence" of the bumper strength and damage resistance of the Taurus and Sable is that the two largest insurance companies — State Farm Mutual and Allstate — and most other insurance companies offer what he called significant discounts for collision and comprehensive coverage on 1987 models.

Advanced aircraft propulsion system could provide fuel savings

GM, United Tech team up on prop-fan for aircraft

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors and United Technologies have formed a joint venture to develop a new propulsion system for aircraft in the 1990s.

"We think this is an opportunity to write a new chapter in the history of commercial aviation," said GM President F. James McDonald. He spoke at a press conference last week, which was held to announce the joint venture and display a model of the propulsion system.

The new company, formed by GM's Allison Gas Turbine Division and United Technologies' Pratt & Whitney, will be called PW-Allison Engines. Its sole purpose is to develop and demonstrate prop-fan engine technology. Hamilton Standard, the world's largest maker of propellers, invented the prop-fan more than 10 years ago under NASA sponsorship and also is participating in the venture.

The prop-fan involves two fan-like propellers rotating in opposite directions. Under development by the companies for two years, the prop-fan is said to save up to 30 percent in fuel compared with today's turbofans without sacrificing speed or passenger comfort.

Officials of the new company said the prop-fan makes a new generation of efficient aircraft possible. Airlines are interested in more-fuel-efficient engines, and GM and UTC claim the prop-fan can cut an airline's operating cost by 10 percent.

F. Blake Wallace, Allison general manager, and Lawrence W. Clarkson, president of Pratt & Whitney's Commercial Products Division, said they estimate 2,000 next-generation aircraft, which will be in the skies in the early 1990s, are possibilities for the prop-fan.

The joint-venture company has no orders now but expects to have some in a year or so. Officials of the company said they believe the prop-fan operation could grow into a $14 billion business annually.

General Electric has prop-fan development in the works, and officials of the joint-venture company expect more competition to arise. Nevertheless, they are confident that their joint venture's technology is superior.

In addition, PW-Allison expects to be able to sell its propulsion systems for less because of lower costs. Instead of developing an all-new engine, a derivative engine based on Allison's current Model 578 is being used.

The investment for prop-fan development is about $500 million to $1 billion, the companies said.

The PW-Allison partnership capitalizes on the strengths of Pratt & Whitney, the leading supplier of aircraft engines for the commercial airline market; Allison, the major supplier of large turboprop engines for military aircraft; and Hamilton Standard, the largest propeller manufacturer.

Last February, Allison and Pratt & Whitney signed an agreement to to demonstrate a propulsion system on a McDonnell Douglas MD-80 aircraft by the end of this year. This planecan carry about 130 passengers.

The joint-venture company will be headquartered in Hartford, Conn. Work on prop-fans will be done in East Hartford, Conn., and Indianapolis.

Auction advertising builds strong auction traffic

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you can get a big regional — or even national — attendance with an ad in the Auction Directory.

So call Marie Hingst at (313) 446-6065 and place your auction ad NOW!

Hyundai sales per dealer a record 1,431

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

The average Hyundai dealership sold 1,431 cars in 1986, a total far above any competitor not only for the year, but in history.

It was the first time any line's average new-car sales per outlet breached the 1,000 barrier, according to Automotive News.

The first Hyundai cars went on sale in limited U.S. marketing areas on Feb. 20, 1986, so the South Korean car's huge sales-per-outlet total was compiled in less than a full year.

At introduction time, Hyundai had 75 dealers. The total rose gradually to 161 by the end of 1986. Sales per dealer are computed on the average number of dealers throughout the year. Even if Hyundai's year-end total had been used, its average still would have been more than 300 units above that of any other make of car on the U.S. market and a record.

Hyundai sells only cars in this country, but its 1,431 sales per outlet substantially exceeded even those makes that offer both cars and light trucks.

The top car-and-truck entry was Toyota, whose dealers averaged 592 new cars and 355 trucks for a total of 947.

Imports captured the first six places in car sales per franchise. Following Hyundai were Honda, 716; Toyota, 592; Nissan, 495; Mitsubishi, 489; and Acura, 352. Acura was new to the U.S. market and began selling cars in March.

Oldsmobile led the domestics with an average of 334 car sales per dealership, unchanged from its record total in 1985. Olds was followed by Chevrolet with 311 car deliveries, down from 331 in 1985.

In 1985, Honda led with 640 car sales per dealer. Mitsubishi led the car-and-truck category in 1985 with 920 sales per outlet.

Of 1986's top 10 makes in car sales per franchise, six were Japanese, three domestic and one Korean. In 1985, five of the top 10 were U.S. lines and five were Japanese.

There were 20,405 domestic-car outlets on Jan. 1 this year, down 268 from 20,673 in business a year earlier. There were 16,969 dealerships selling imported cars, but 12,218 of those also sold domestic lines and were included in the domestic total. There were 4,751 import-only dealerships as of Jan. 1.

The overall average number of new-car sales per domestic company outlet, including Volkswagen and Renault, was 399 in 1986, up slightly from 393 in 1985.

New-car deliveries per dealership last year averaged 464 for General Motors, virtually unchanged from 465 in 1985. Ford points delivered an average of 365 new cars in 1986 compared with 374 in 1985.

Chrysler Motors dealerships turned over the keys to an average of 292 new cars, up from 285 in 1985. American Motors-Renault new-car deliveries, at an average of 52, were well below the 91 of the year before. The average Volkswagen point delivered 247 new cars including imports, about the same as the 246 sales per dealer in 1985.

An analysis of domestic-car sales per dealer by market class — also shown in an accompanying table — found that Escort, with 87, was the leader among the subcompacts for the second year running. Second in the class for the second year was the Volkswagen Golf with 84.

In the compact class, Honda's Accord took the honors with deliveries averaging 239 units. The closest competitor in that category was Chevrolet Cavalier with 71 sales per average dealership. In 1985, Cavalier led that market sector with an average of 85. Accord was not included in the domestic rankings in 1985.

Leader in the intermediate category was Oldsmobile Cutlass Ciera with 104 deliveries followed by Chevrolet Celebrity and Buick Century with 82.

Among standard-size cars, the Oldsmobile 88 led the way with 82 sales per franchise. It was the leader in 1985 as well with 59. Buick LeSabre, with 45 sales per deal in 1986, moved up to the second spot among standards from fourth in 1985.

Cadillac DeVille-Fleetwood-Brougham, with an average of 146 sales per franchise, was the leader among the luxury lines.

HYUNDAI

FROM PAGE 1

averaged twice that.

Why the success? Dealers point to two things: Quality and price.

"If you build a better mousetrap and sell it for less than anyone else, the world will beat a path to your door," said John Eagle, president of Eagle Hyundai Inc., Dallas.

Of course, an early reputation for quality will be put to stricter tests over time. For now, according to a J.D. Power & Associates survey, Hyundai buyers are no more content with their cars than new-car customers as a whole. The California marketing information firm found that half of Hyundai buyers were extremely satisfied with their cars three months after purchase — about average for the industry.

But dealers give the company high marks for paying attention to the customer. Some early minor problems — a weak trunk spring, for example — were soon corrected at Hyundai's Ulsan, South Korea, assembly plant. Other companies, dealers say, might not have bothered with the problem until the next model year.

On the pricing front, Hyundai has had the good fortune of seeing the Korean won keep pace with the falling U.S. dollar. As a result, Hyundai hasn't felt the same pricing pressure faced by Japanese companies, which have been forced to raise prices sharply to make up for the stronger yen. The base Hyundai Excel, which recently went up $200, now costs $5,195. Dealers estimate that their average sticker price falls in the $6,500-$7,000 range.

There's more to Hyundai's success than its product, however. Hyundai's method of picking dealers is designed to produce high sales, Jamiesson said. No dual dealerships are allowed. And those most likely to be selected are established dealers, often mega-dealers, who have a strong history and know their market.

Beyond that, though, Hyundai is trying to give dealers room to work, supplying them with as many cars as they can sell and not overloading markets. If a leading importer has six outlets in a city, Hyundai might come in with four or five in prime locations. "Fewer is better," Jamiesson said.

"If we can strategically put the dealers in the right location, their advertising clout together helps them do a better job," Jamiesson said.

Its existing dealer network, which covers major markets on both U.S. coasts and throughout the South, is responsible for the sales performance to date. Of the 161 dealers in place by year end, 136 sold more than 1,000 cars apiece. Six dealers exceeded 2,000.

Sales per dealer will inevitably fall, Jamiesson said, as Hyundai steps into smaller markets where volume won't be as high. But there are still some major city markets to conquer. This fall, Hyundai takes its first steps into the Midwest, where it has nine dealers lined up in the Chicago area. By the end of 1988, Hyundai expects to have dealers in 48 states.

Jamiesson said Hyundai's challenge in its second year will be balancing inventory with demand and keeping dealers supplied without overstocking. Hyundai's current 22-day supply is just a shade above the company's goal.

Another challenge, and a far more tedious one, will be keeping track of the 5,500 applications Hyundai has received so far from dealers interested in obtaining a franchise. If Hyundai's 1987 performance even faintly imitates the 1986 record, that stack will grow.

PRODUCTION

Car output holds steady; week's build is 170,196

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled production of 170,196 cars was 0.91 percent below the prior week's 171,761 and 3.21 percent below the year-ago week's 175,844.

So far this year, 1,330,326 cars have been assembled, 8.63 percent below the 1,456,032 completed last year at this point.

Last week's production was split this way: General Motors, 51.09 percent; Ford Motor Co., 26.23 percent; Chrysler Motors, 13.10 percent; Honda of America Manufacturing Inc., 3.87 percent; New United Motor Manufacturing Inc., 2.35 percent; Nissan Motor Manufacturing Co., U.S.A., 1.72 percent; Volkswagen of America, 1.18 percent; and American Motors, 0.46 percent.

Volkswagen of America's Westmoreland, Pa., plant resumed output last week (Feb. 23) after being idle for one week for installation of new parts.

GM's Arlington, Texas, plant resumed production today (March 2). The plant had been down since Dec. 8 for installation of paint equipment.

GM's Norwood, Ohio, plant also resumed output today after being idle for one week for inventory adjustment.

Saturday (Feb. 28) overtime was slated for three GM plants: Detroit (Clark Avenue); Linden, N.J.; and Wilmington, Del.

Ford scheduled Saturday overtime at its Lorain, Ohio, and Atlanta plants.

All Ford plants are slated for daily overtime this week.

Chrysler's Newark, Del.; Sterling Heights, Mich.; and Detroit plants were scheduled for overtime Saturday. Those plants are slated for daily overtime this week.

Truck assemblies jump to 78,680

U.S. truck manufacturers planned to build 78,680 units last week, 5.79 percent more than the previous week's 74,376 and 11.52 percent more than the year-ago week's 70,552.

Year-to-date, 619,618 trucks have been assembled, 3.06 percent more than the 601,224 completed last year at this time.

General Motors' slated Saturday (Feb. 28) overtime at its Baltimore; Detroit; Pontiac, Mich. (No. 2); and Fort Wayne, Ind., plants.

Ford Motor Co. scheduled Saturday overtime at its Wayne, Mich.; Kansas City, Mo.; and St. Louis plants.

Daily overtime is scheduled this week (March 2) at all Ford truck plants.

Chrysler Motors' Warren, Mich., plant is scheduled for daily overtime this week.

Canadian cars, trucks trail 1986

Canadian automakers scheduled production of 20,857 cars last week, 1.54 percent more than the prior week's 20,540 but 15.44 percent below the year-ago week's 24,664.

So far this year, 157,604 cars have been built, 10.59 percent below the 176,272 assembled last year at this point.

Last week's truck production totaled 18,368 units, 4.13 percent more than the previous week's 17,640, but 6.22 percent below the year-ago week's 19,586.

Year-to-date, 131,206 trucks have been assembled, 16.99 percent below the 155,061 built last year at this time.

U.S. INDUSTRY TOTAL	188,001	253,907

†—Estimate

Sales slide 26% for Feb. 11-20; total is 188,001

Sales of new domestic cars fell to 188,001 in the 10 days ended Feb. 20., a drop of 26 percent from 253,907 a year earlier.

The daily selling rate weakened during the period to reverse a steadily upward trend that had started in mid-January. The mid-February daily selling rate was 20,889 cars, compared with 21,267 in the first 10 days of the month and 28,212 a year before.

Unusual snow, freezing rain and cold weather helped keep car shoppers in the East and Southeast out of showrooms.

Only Honda reported a gain in retail deliveries, as sales climbed 55.4 percent.

American Motors led those reporting declines with a fall-off of 63.7 percent. Nissan dealers sold 38.2 percent fewer cars than they did a year earlier, and General Motors dealers were down 38.1 percent.

Volkswagen had 23.6 percent fewer retail sales, and Chrysler Motors sales declined 14.8 percent.

Ford Motor Co. points reported relatively better sales, compared with January, but they were 7.8 percent below a year earlier.

Toyota, which was not selling U.S.-assembled cars a year ago, had mid-month deliveries of 684 units.

NHTSA to probe surging in Colts

WASHINGTON — NHTSA has informed Chrysler Motors that it is opening a defect investigation into "sudden unexpected acceleration" of all 1985-86 Colts. Chrysler imports the Colt from Japan's Mitsubishi Motors Corp.

NHTSA asked for data on the number of vehicles sold, their engine types and equipment. Chrysler had not responded by late last week.

NHTSA, in a letter, also asked Chrysler to provide complete details of owner complaints, field reports, service and technical bulletins, investigations, accidents and lawsuits.

Test data showing vehicle acceleration "from a standing start as a function of throttle position" has been requested, together with Chrysler's evaluation of the "causal or contributory factors."

NHTSA records reveal six complaints from owners, four accidents and three reported injuries. The government estimates that 150,000 models are affected.

Insurance outlook improves

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

After suffering more than three years of eye-popping hikes in property and casualty insurance premiums, the nation's auto dealers have begun to get some relief.

Increases for policies renewed in 1987 will range generally between 5 percent and 25 percent, dealers and insurers said. And having been shocked in the past by triple-digit increases, dealers appear to be absorbing this year's higher premiums without flinching.

"The number of calls I have received has dropped off dramatically," said Grover H. Lewis Jr., operations manager for the National Automotive Insurance and Service Agency, an affiliate of the National Automobile Dealers Association. "There doesn't seem to be much concern."

The relief follows considerable scrambling to reduce risk and cut insurance costs. But the efforts haven't been enough to stop the increases altogether.

Last year, a survey by NADA found that only 32 percent of dealers who had taken steps to manage their risks had seen their premiums drop substantially.

And while lower premiums will still be the exception this year, the increases will, in one insurance official's terms, finally show some signs of sobriety.

Universal Underwriters, the nation's No. 1 insurer of auto dealers, expects its average property and casualty policy, including liability, will cost 5 percent more this year than in 1986. Others in the industry predict the typical increase will range up to 25 percent. The variations reflect a number of factors, including the policy's renewal date, the dealership's claim history, the size of its inventory and the carrier's loss record.

Another indication of more stable pricing is the fact that companies are actually seeking dealers' business. John Deere Insurance Co., for example, has targeted the auto-dealer market as a growth area after years of concentrating on farm-implement dealers.

Despite the improvements, however, there are some lingering problems.

In Texas, for example, mid-size dealers have no trouble getting $5 million of umbrella liability coverage, said Gene Fondren, president of the Texas Automobile Dealers Association. But for larger dealers, who might need an umbrella three or four times that size, the costs are disproportionately higher.

In addition, as dealers have become more sophisticated insurance buyers, so too have insurers become more careful sellers. As the

Daihatsu unveils the Charade, a three-cylinder minicar destined for the U.S market this fall

AUTOMOTIVE NEWS JOE WILSSENS

Daihatsu heads for U.S.

TOKYO — Japan will permit Daihatsu Motor Co. to export 10,000 cars to the United States beginning April 1.

The Kyodo news service quoted an anonymous government official who said quotas will be trimmed for the makers already exporting and that Toyota will be urged to reduce its estimated 620,000 annual shipments by 2,700. It owns 14.8 percent of Daihatsu.

Daihatsu plans to sell Charade models of the type unveiled at the Geneva show. Daihatsu had hoped to get 1 percent of the quota, approximately 23,000 vehicles.

GENEVA

Americans active; EC warns Japan

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GENEVA — The Americans were at center stage during Europe's early spring showcase here last week — the 57th international auto show — but it was the Japanese who seemed to be on everyone's mind.

For starters, Daihatsu unveiled its new Charade, the three-cylinder mini that will spearhead the company's entry to the U.S. market this fall and may also be a car Poland decides to build and export to the West.

And with the world industry watching from Geneva, the European Commission in Brussels warned Japanese makers that unrestrained exports to Europe could result in broad sanctions. The stern reminder followed word that Japanese imports grew 38 percent in January after a late-1986 slack-off.

Speaking on the Citroen stand, Peugeot S.A. Chairman Jacques Calvet conveyed a new line of thinking with regard to Japanese expansion here. The French, he said, are willing to "study the problem" of removing the country's 3 percent ceiling on Japanese imports in exchange for a pan-European quota. In the past, individual restrictions in France, Italy, Spain and the United Kingdom have complicated the notion of EC-wide restraints.

The ideal Japanese penetration, said Calvet, is somewhere between their 10.7 percent market share in 1985 and last year's 11.7 percent.

While Europeans worried about Japan's high volume here, American companies talked of attaining relatively minor sales totals in Europe with the help of the descending dollar.

Releasing more details about its return to Europe, Chrysler said it would be happy to achieve an annual rate of 5,000 units after 18 months in the market. Ford may sell the U.S.-built Taurus station wagon in West Germany, and Gen-

see GENEVA, page 56

GM: 3 million air bags in '92

DETROIT — General Motors is planning a major effort on air bags and expects to build nearly three million cars with driver-side bags as standard equipment in the 1992 model year.

The program will start with 500,000 such cars in the 1990 model year.

GM's new program will make it the largest supplier of air-bagged cars in the 1990s, Chairman Roger Smith said last week.

Smith said consumers have a "new interest in safety" and are willing to accept them as a supplement to manual seat belts.

GM tried air bags once before, with unsatisfactory sales results. The bags were optional on Cadillac, Oldsmobile 98 and Buick Electra in 1974-76, but the program was discontinued when sales totaled only about 10,000 during that period.

At that time, GM had tooling to produce 100,000 air-bagged cars a year, but sales did not materialize.

GM's new drive will start with air bags as standard equipment on 500,000 cars in the 1990 model year. The installation rate will be expanded in 1991 and in 1992, when it will reach nearly three 3 million units. GM declined to say what car lines will have the air bags as standard equipment.

If GM continues selling at 1986 levels, that would represent nearly three-quarters of its output; last year it sold 4.6 million cars in the United States. By the end of the 1992 model year, GM may be installing air bags

Yugo 103 by Giugiaro

Yugo recently unveiled its Giugiaro-designed 103 in Yugoslavia. Yugo America says the five-door hatchback will not be exported to the United States until 1989 at the earliest. Officials at Zastava, the Yugo manufacturer, said production will begin in the fall of 1988. The company is expecting to build 60,000 units per year at its facility in Kragujevac.

GM stock-buyback program gets mixed reviews from Wall Street

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Investors apparently don't quite know what to make of General Motors' decision to buy back up to 20 percent of its stock by the end of 1990.

GM's board of directors last week approved the repurchase of up to 63.9 million of its 319.4 million common shares outstanding by the end of 1990. The board also authorized the repurchase of up to 5 million shares of Class E (EDS) and up to 5 million shares of Class H (Hughes) stock.

The buybacks could cost GM more than $5 billion at current stock prices, which would make it the largest stock buyback by a U.S. corporation.

GM said the stock repurchases will be made from time to time as market and business conditions warrant. The shares will be held indefinitely in GM's treasury "for possible business use." In 1987, GM will purchase no more than 10 million shares, or about 3 percent

TV auto ads top $2 billion for first time

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Television advertising for new cars and trucks topped $2 billion for the first time in 1986.

The Television Bureau of Advertising (TVB) said combined television commercial spending by new-car and truck dealers, their ad associations and the factories reached $2.073 billion last year, an increase of 22 percent over the $1.7 billion spent in 1985.

Total expenditures for network television last year rose 11 percent to $824.9 million from $741.7 million in 1985, while spot TV expenditures rose 30 percent to $1.248 billion.

The result is that regional and local buys accounted for 60.2 percent of all automotive TV ad expenditures last year, compared with 56.4 percent in 1985.

Roger D. Rice, TVB president, said the shift in spending is the result of two trends: more target marketing by the factories and increased participation by regional dealer advertising associations.

"Region by region, you can see the shifts," Rice said. "Spending on big cars is in the middle of the country, while for imports it is generally within 300 miles of either coast.

"There is more target marketing as the companies are targeting who they're going after.

"The car companies have become better marketers and they are working more with the dealer groups," Rice said. "The result is that dealer groups are becoming more important."

Rice said he expects 1987 spending to be heavy in the first half of the year as the companies struggle to retain or capture market share in the wake of annual-percentage-rate finance incentives.

He also said that although spot time is more expensive to use than network time, the trend toward more regional and local purchases should continue.

Third Porsche pice hike puts '87 boost at $6,260

DETROIT — Porsche Cars North America has raised prices for the third time since the end of the 1986 model year. Automotive News estimates that the three hikes average about $6,260 per model, or 17 percent, on a sales-weighted basis.

The West German mark has risen about 11 percent against the dollar since last September.

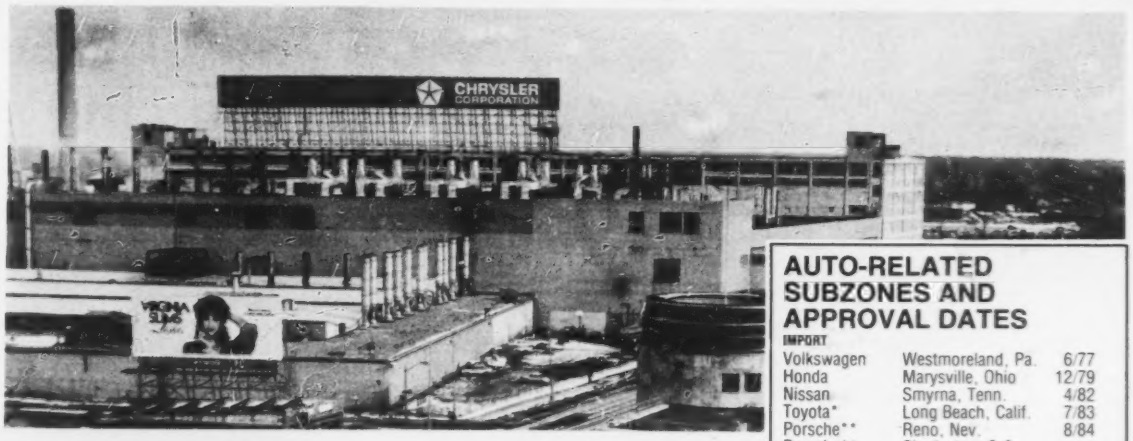
The company said the latest increase averages 3 percent on the sticker price of all models. Automotive News estimates that at $1,200.

Porsche prices went up 8.6 percent at introduction time last September and 5 percent Jan. 1. Automotive News estimates that those boosts averaged $3,300 and $1,760, respectively.

Prices of optional equipment went up an average of 2.5 percent last week.

The 924S coupe rose $915 to $23,910. The 944 coupe went up $1,065 to $27,840, and the 911 coupe jumped $1,015 to $41,440.

Increases since the end of the 1986 model year are: 924S coupe, up $4,010; 944 coupe, up $3,340; 944 Turbo coupe, up $6,500; 911 coupe, up $7,465; 911 Turbo coupe, up $9,820; 928S4 coupe, up $11,350.



SUBZONES: *Duty-free plants under political gun*

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The use of foreign trade subzones by domestic and foreign auto manufacturers to skirt tariffs on imported components is being questioned here as trade legislation hearings gear up.

In 1986, trade zones accounted for nearly $21 billion worth of goods produced, of which about 75 percent was domestic content, according to Dennis Puccinelli, an analyst with the Foreign Trade Zone Board in the U.S. Department of Commerce.

Automotive manufacturing made up nearly $16 billion of that total, using $2.7 billion worth of imported components blended with $13 billion in domestic content.

The subzones, in use at 32 auto assembly plants in the United States, allow duty-free import of components that are used in production. The imported content of the finished vehicle is assessed at the same 2.5 percent tariff rate currently used on imported cars.

The same components, if imported separately without the trade zone relief, would be subject to tariffs ranging from 3.2 percent for engines to 10 or 11 percent on some individual parts, Puccinelli said.

According to a pending subzone application by Toyota for its Kentucky plant, the subzone tax status would save the company $41 per car.

Apparently that is too much for some members of Congress. Subzones "save importers a hefty chunk of duties, which are usually tax deductible anyway," Rep. Marcy Kaptur, D-Ohio, told a trade subcommittee of the House Ways and Means Committee.

U.S. plants of foreign automakers have been among the first and last to be granted subzone status. Volkswagen was the first; its Westmoreland, Pa., plant won approval in November 1977. The most recent was Mazda's Flat Rock, Mich., plant, which obtained subzone status in April 1986.

Besides Toyota's application for its Kentucky plant, Chrysler and Mitsubishi have applied for subzone status for their Diamond-Star venture in Illinois.

Porsche, which imports cars at its Reno, Nevada, headquarters and also in Charleston, S.C., has obtained subzone status for parts warehouses and vehicle preparation facilities at both sites.

General Motors has a subzone with Toyota at New United Motor Manufacturing Inc. and two subzones for auto electronic component plants. Chrysler has three subzones for auto electronics in Indiana.

While both domestic and foreign companies use the subzones, the lion's share of imported components processed through the zones comes from Japan, according to the Motor and Equipment Manufacturers Association.

James J. Conner, MEMA executive vice president, told the trade subcommittee, "Approximately $2 billion in parts were imported from Japan in this way."

Kaptur said: "Because inaction through the MOSS (Market Oriented Sector Selective) process is showing us that Japanese auto firms are not interested in fair trade, I suggest that we bar the use of the Foreign Trade Zones by Japanese companies and, therefore, impose on their parts the duties normally associated with imported components."

The debate on the use of subzones may hinge on the original intent of foreign trade zones. Testimony from MEMA included this statement: "It appears that auto manufacturing was never intended as a major zone activity. During hearings held on the zones during 1948, the Department of Commerce went so far as to state, we 'cannot conceive of Ford wanting to establish (its) automobile factory in such a location (trade zone).' "

While the law was amended in 1952 to allow the creation of subzones at manufacturing sites, MEMA said, "Original proponents of FTZs never intended for zones to develop into a way of evading import duties."

Kaptur said that trade zones were intended to allow duty-free importation of goods to be processed into finished products for sale outside the country.

The Foreign Trade Zone Board, which oversees the program, interprets the law differently.

Puccinelli said there is no provision mandating the export of the finished product. "The act doesn't really speak to where the product must go, it talks directly to customs procedures," he said.

As a result, Puccinelli said, the board "cannot outright deny the applications" solely on the basis of where the product will be sold.

Currently, there are 133 FTZs in the United States. In addition, there are 96 subzones of those trade zones, usually located at a manufacturing site. Of the 96, 41 are automotive-related.

Mack may build Baby 8 overseas if UAW vetoes pact

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The future of Mack's 6,000 hourly workers and its sourcing plans are up in the air, as the company negotiates for UAW approval on contract concessions already approved by its union locals but vetoed by the UAW International.

Mack Chairman John Curcio said he preferred building the company's new line of "Baby" Class 8 trucks, slated for January 1988 production, at the company's Macungie, Pa., plant "with our own people." But, he added, they could be assembled in its new Winnsboro, N.C., plant or in Korea, France or Brazil just as easily.

"One way or other, we're going to get the necessary cost reductions to be competitive," Curcio emphasized.

Mack also will decide whether to continue sourcing transmissions at Hagerstown, Md., and where to source CKD (knocked-down assemblies for export) operations currently handled in Allentown. That plant will be closed this fall. No decision has been made on where to move the CKD operations. But based on tentative agreements with its Hagerstown local, Mack had planned to continue producing transmissions there.

Curcio said, "We negotiated four agreements with four UAW locals in three states, and they were ratified by over 70 percent of the people.

"They understand the need for Mack to continue getting its costs in line. They also know that, prior to the time we reached the agreements, we considered outsourcing the manufacturing of transmissions (at Hagerstown)," he said.

UAW officials, however, struck down the local agreements. Union officials said the locals violated its master contract because their negotiations did not include the International.

After meeting for several hours on Feb. 28, the two sides agreed only to set up another meeting at an undisclosed neutral site.

Curcio, declining to discuss the negotiations, refuted charges that the company is stockpiling engines and transmissions in case of a strike.

The company recently announced the recall of 109 workers at Hagerstown. Kim Blake, president of UAW Local 677 in Allentown, believes the move is a first step toward stockpiling parts to hedge against a strike.

Local union officials recently said UAW Vice President Bill Casstevens wants a strike against the truck maker when the current contract expires. Blake said that Mack officials told him privately last month they planned to stockpile parts in anticipation of a walkout. "They're going to get ready for three to six months worth of strike by having three to six months worth of components," Blake said.

Walter Meck, Mack executive vice president of finance, declined to comment on Blake's comments.

RV shipments in December increase 15%

Wholesale shipments of recreational vehicles totaled 26,600 in December and up 15.6 percent over the year-earlier month.

The Recreation Vehicle Industry Association said calendar 1986 shipments totaled 379,500 units, up 5.7 percent from the previous year. It was the fourth consecutive year in which industry shipments exceeded 300,000 units, RVIA said.

Van conversion shipments of 12,100 in December were off 6.2 percent from a year earlier. For calendar 1986, they totaled 181,900, up 10.4 percent from 1985.

Towable RV deliveries of 9,200 were up 35.3 percent in December. For calendar 1986, they totaled 129,900, up 3.3 percent from 1985.

Motor home deliveries of 5,300 in December were up 55.9 percent from a year earlier. For calendar 1986, they totaled 67,700, off 1.5 percent from 1985.

RVIA noted that, according to its data, retail sales of travel trailers and Type A motor homes continued to strengthen in December. It attributed that in part to tax-related motives, but added that there was a definite improvement in the sales trend line last year.

Recreational Vehicle Wholesale Deliveries

	December 1986	December 1985	% change	12 months 1986	12 months 1985	% change
Travel trailers	5,300	4,100	+ 29.3	86,000	82,900	+ 3.7
Folding camping trailers	3,400	2,400	+ 41.7	36,500	35,900	+ 1.7
Truck campers	500	300	+ 66.7	7,400	6,900	+ 7.3
Towable RV total	9,200	6,800	+ 35.3	129,900	125,700	+ 3.3
Conventional (type A)	2,600	1,800	+ 44.4	33,300	33,600	− 0.9
Van Campers (type B)	700	500	+ 40.0	6,200	6,700	− 7.5
Chopped vans (all)	2,000	1,100	+ 81.8	28,200	28,400	− 0.7
Motor home total	5,300	3,400	+ 55.9	67,700	68,700	− 1.5
Van conversions	12,100	12,900	− 6.2	181,900	164,800	+10.4

TARGET: *Coachmen R&D program seeks to develop motor home to sell for less than $20,000*

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

ATLANTA — Given current technology, Coachmen Industries doesn't feel it's possible to produce a quality motor home for under $20,000 without taking a lot of features out of the product.

But "a few years from now it may be," said Sydney Johnson, vice president of marketing.

That's one of the company's major objectives in the multimillion-dollar, multiyear product development program it announced recently.

From the standpoint of research and development, one of the goals Coachmen sees down the road is a melding of traditional RVs and vans to create lower-priced vehicles for the entry-level buyer.

"We see more multi-purpose vehicles, van-like in nature, but geared to the amenities and lifestyle of motor home owners," Johnson added.

Those vehicles are expected to appeal to a larger segment of the population because of their greater versatility for everyday and leisure travel.

Coachmen is still interested in expanding its van conversion operations, which are based in Elkhart, Ind., but it doesn't believe the time is right to boost production. Pointing to the intense competition from hundreds of converters, Johnson said his company would prefer to wait for an industry shakeout, particularly among smaller firms, before it undergoes a major expansion.

"It's very difficult, when you have that many competitors, to produce a quality product at a decent profit," he added. "Many converters don't even offer a warranty or dealer support programs. We don't operate that way."

Meanwhile, in its quest for first-time buyers, Coachmen is stressing value, and Johnson said he doesn't see price as the major obstacle to attracting those buyers.

"They must be able to see the product fit their lifestyle as well as their budget," he said.

However, the company is performing research and development on cost reductions that may or may not result in price reductions on its products, Johnson added.

Its R&D focus is on an entire range of products, the first of which is a new upscale aerodynamic trailer. The trailer was shown at the Recreational Vehicle Industry's annual convention and exhibition here.

Coachmen also is developing two other entry-level products: a camping trailer and a fold-down camping trailer.

Johnson said those products will be introduced during the next year or so and will feature major design, weight-reduction, performance and livability improvements.

Coachmen is the second-largest manufacturer of motor homes nationally and also builds a variety of other RV products, such as travel trailers and customized vans.

It received an order for 500 motor homes recently from a national rental company, which it called the largest single sale in its history.

The motor homes were sold to American Land Cruisers Inc., Miami. They have a total value of between $13 million and $15 million, according to a Coachmen spokesman.

The order means that about 100 more workers will be hired at the company's manufacturing plants in Indiana, Georgia, California and Texas, the spokesman said.

RVIA plans expansion of programs to boost awareness and sales

RESTON, Va. — The Recreation Vehicle Industry Association has taken a number of steps to expand RV awareness and sales.

RVIA's public relations agency, Burson-Marsteller, is launching a second year of market-expansion activities.

In addition to its print and television promotions, the agency plans to form an advertising coalition extending beyond the RV industry. The program will support RVIA's future broadcast ventures and special magazine sections with advertising buys.

Major companies such as tire manufacturers and photographic companies interested in reaching the RV market are being targeted as potential recruits for the coalition.

As part of its effort at image enhancement, the agency will involve the RV industry in highly visible charity events, sponsorship of sports and entertainment events and tie-ins with influential groups that have potential RV lifestyle connections. Such groups include the American Automobile Association, state tourism offices and the Walt Disney organization.

In its research, Burson-Marsteller is going beyond its first-time RV buyer study to identify the leisure habits and buying preferences of all Americans between 35 and 49 years of age. That group is a key target for the industry's sales expansion.

Meanwhile, the first-time-buyer seminar conducted by the agency at the Atlanta convention is going on the road to reach more dealers.

With RVIA and the Recreation Vehicle Dealers Association as cosponsors, the seminar will be held by Burson-Marsteller at manufacturer-dealer meetings, trade shows and other dealer gatherings.

The RVIA also has doubled its funding to $20,000 for promotion of National Tourism Week, scheduled for May 17-23.

RVIA's contribution puts it on a par with other supporters of National Tourism Week, such as the trade associations representing the hotel, restaurant, tour operator and travel agent segments of the travel industry.

The focal point of this year's tourism week promotion is a special travel-industry section in Time magazine's business edition that reaches about two million government and industry leaders.

The section will emphasize the importance of travel and tourism to the economy.

RVIA and the National Park Service also are sponsoring a conference entitled "Tourism and Our National Parks" April 12-14 at the Marriott Hotel in Des Moines, Iowa.

The conference is designed to meet the needs of tourism-related small businesses, especially those in the Central United States.

The purpose of the conference is to provide attendees with information about marketing, packaging and publicizing their product or service. It also will explain how to access existing travel sales networks and market travel opportunities to lesser known parks in a 10-state area.

Nearly 400 representatives from national parks, private campgrounds, RV dealerships, state travel and tourism departments, tour companies and other travel and tourism-related enterprises are expected to attend.

The RVIA also has two publications available. One is a 253-page "how-to" promotional manual that is designed for RV dealers who want to reach first-time buyers.

It also offers a "1987 Membership Directory and Industry Buyer's Guide." The latter is a 102-page book listing all segments of the $8-billion-a-year RV industry.

Eurofox conversions for export
Eurofox Inc. uses European Ford Cargo Van chassis for the van conversions it is producing in Elkhart, Ind., for the European market. The chassis are imported to Elkhart, converted and shipped back to Germany for distribution by Ford's dealer network there. The company offers customized van conversions on any American or European chassis, such as Fiat, Iveco, Mercedes-Benz, Renault and Peugeot, as well as Ford, Dodge and General Motors. It is producing three units a week.

Xplorer offers 2 new models

BROWN CITY, Mich. — Xplorer Motor Home Division of Frank Industries here has introduced two new van-chassis-based motor homes and is offering an improved warranty for 1987.

Xplorer wholesaled about 500 vehicles last year. Its van/motor home vehicles are of a type expected to become more popular with other manufacturers in their quest to expand appeal among entry-level buyers.

For the 1987 model year, Xplorer is offering its model 222 XtraVan on a Ford Super Van chassis.

It also available on a Dodge chassis.

The unit retails for $25,214 in both chassis versions.

Combining some of the features of a customized van with those of a motor home, the 222 has radial tires, a raised vista roof and sliding or reclining swiveling captain chairs. Optional are single beds on each side that convert to seats.

The 18.5-foot vehicle also has a rear double bed, marine toilet and 22-gallon holding tank.

Xplorer's XtraVan is a combination van conversion/motor home

Special equipment packages provide features like running boards with mud guards and trim, custom aluminum wheels, bay window and continental spare tire with lock.

Xplorer also has introduced a 218 Lil' Xtra. The vehicle is designed to double as a second car and a self-contained motor home.

It has three bay windows, a raised vista roof with sky windows and a paint-stripe package. The interior features three high-back swiveling captain chairs, a round table and a compact kitchen that includes refrigerator, stove and pressure water system.

It is available on Ford, Chevrolet and Dodge van chassis.

The Dodge Maxivan version retails for $22,872. The regular Dodge model retails for $21,894. The Ford Super Van version retails for $20,937. The Ford regular van version retails for $21,286. The Chevrolet version retails for $21,201.

Explorer also is offering a 5-year/50,000-mile warranty on its 300 and 400 series models. The warranty covers the engine, transmission, rear-wheel drive, front and rear suspension unit, manual/power steering, air conditioner, brakes, electrical system, seals/gaskets, plumbing and appliances.

Similar warranty protection is available as an option on its 200 series models.

Coverage includes the chassis and the conversion and is transferrable with a change in vehicle ownership.

Now, Pathfinder Gives You Exactly What You've Asked For...

☑ Elegant Interiors
☑ Distinctive Exteriors
☑ Rugged Four-Wheel Drive
☑ 12-Month Full Warranty
☑ 15 Years of Experience

That's right, only Vans by Pathfinder gives your dealership all this. We've been in the business since 1972 supplying four-wheel drive conversions to dealerships throughout the nation.

We take the "risk" out of factory warranty claims by protecting your original factory warranty and backing it up with our own 12 months "no-hassle" service guarantee.

We also realize that your dealership is looking for a choice in van conversions. That's why we let you have it **your way!**

You can have your choice of exteriors, interiors, and/or four-wheel drive conversion packages. The point is **you decide** what is best for your selling area.

What about Minivans? Vans by Pathfinder offers the same options and conversions on most minivans — including our four-wheel drive package.

Of course the best way to get the complete story on van conversions is to contact us at: 800/423-9491, (in CA) 818/961-5471, ask for Dick Long.

We're the last word in Van Conversions.

Vans by Pathfinder

Pathfinder Equipment Co., Inc.

IUE to seek change in GM profit sharing

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Leaders of the International Union of Electronic Workers have joined top UAW officials in criticizing General Motors for paying millions of dollars in executive bonuses while making no profit-sharing payouts to hourly workers.

Robert Livingston, chairman of the IUE's GM Conference Board and chief negotiator, said that improving the profit-sharing formula will be a major issue in this year's negotiations.

The IUE contract, covering 25,000 workers at eight GM component plants and one assembly plant, expires Sept. 14, as does the UAW's contract.

The IUE, which is the second-largest union representing autoworkers, also has contracts covering 3,000 Ford Motor Co. workers and 2,000 Chrysler Corp. employees. The Ford and Chrysler agreements expire in 1988.

The IUE-GM profit-sharing formula is similar to the one in the UAW-GM contract, said Edward Fire, IUE secretary-treasurer.

Both formulas are based on a percentage of U.S. profits exceeding a minimum annual return that reflects the stockholders' investment.

Fire said, "We're going to have some serious discussions with GM this summer. They sold the UAW the idea of profit sharing in 1982 in exchange for concessions. For years, GM resisted the union strenuously in terms of profit sharing. But in 1982, it was their (GM's) idea.

"They have said consistently, 'You have got to buy in.' Now, we end up with this. How do you explain to people in the plant that $170 million is available for executive bonuses but nothing is available for profit sharing?" Fire said.

Buick boosts plastics use

SOUTHFIELD, Mich. — Despite some setbacks, suppliers of engineering plastics continue to make gains in vehicle exterior body panel applications.

Buick is making a running change from steel to plastic front fenders on its 1987 LeSabre T-types. Buick was expected to begin production of plastic fenders on the car in December, but technical problems delayed the program.

The fenders are made of a General Electric resin capable of withstanding E-coat (corrosion protection) applications and the high heat of paint ovens. As a result, the fenders can be processed through the assembly plant in the same way steel panels can — a critical factor, GE said.

"This is not a major change, but a major breakthrough," GE's Herbert Hoedl, general manager of the transportation marketing and technology department, said in detailing the application.

"No changes will have to be made in the assembly process to accommodate the plastic fenders."

Buick said it is going to plastics because of the material's lighter weight, resistance to corrosion and ability to withstand minor impacts. Buick would not say whether it plans to expand use of plastic fenders to its entire LeSabre line or to other models.

In Japan, Nissan is using the same GE resin on a new sporty model, the Be-1. The 1-liter car, which is expected to be sold only in Japan, will use plastic for front fenders, front fascia and the rear end.

GE said there would be additional exterior body-panel applications for its plastics later this year. The company said it has performed engineering work on an all-plastic-body, low-volume specialty car for one automaker and is involved in the design of a plastic-paneled sedan as well.

The movement from steel to plastic for outer body panels was dealt a serious blow last year when General Motors said it was putting its GM-80 program on the back burner.

The GM-80, originally a 1990s front-drive, plastic-bodied replacement for the present Chevrolet Camaro and Pontiac Firebird models, was moved to GM's advanced engineering team with no production target date.

The GM-80 would have been the auto industry's first attempt to use plastic bodies in high-volume production.

But Hoedl said the cancellation of the car won't deter the auto industry from using plastics for future body parts.

GM-80 was scrapped primarily because of the difficulty involved in switching to front-wheel-drive, not the use of plastics, Hoedl said.

The overall cost of the GM-80 program also was a major factor. The cars would have carried a base price of $20,000, Hoedl said.

But recent advances in materials and design and manufacturing capabilities have eliminated many of the cost penalties associated with the use of plastics in the days when GM-80 was conceived, GE said.

As a result, the company remains bullish on the market for its materials.

TV

FROM PAGE 3

"Network is less expensive than spot," he said, but the price gap is narrowing.

In the spending by a factory and its dealer ad associations — a new category on the TVB report form — General Motors and its dealer ad groups led the list with $398 million in total TV buys, roughly 20 percent of total automotive TV spending.

There were few surprises in the ranking order. However, of the top 18 companies delineated by TVB, only the spending total by American Motors and its dealer ad groups declined in 1986.

For the first time, TVB reported television ad spending by brand for cars and trucks, including factory and dealer group outlays.

According to the figures released by TVB, TV spending to support Ford Division new cars led the pack, with total TV spending of $116.6 million, well ahead of second-place Chevrolet car spending at $92.8 million. The gap was wider than in 1985 because Ford car spending rose 14 percent while Chevrolet spending decreased 3 percent.

Heavy launch spending by Hyundai rocketed that make into the ranks of the big guys, with total TV spending of $433.6 million.

In addition to the top 15 makes included in the TVB report, the group said Audi TV spending was $33.2 million; Mercedes-Benz, $28.7 million; Cadillac, $26.6 million; Chrysler, $20.8 million; Plymouth, $18.6 million; and Lincoln, $9.7 million.

In the competitive truck market, Toyota spent the most in 1986, with a total of $82.7 million. Toyota passed 1985 truck leader Nissan with a 34 percent year-to-year increase, compared to a 13 percent boost for Nissan.

And once again, Ford-brand spending topped Chevrolet, although in the truck category it was for third place behind the top two Japanese imports.

Interestingly, on a combined car-and-truck brand basis, the Ford brand received television advertising support of $186.2 million last year, compared with $153.4 million for Chevrolet.

In car advertising, the disparity between the two was a difference of $21 additional network advertising for Ford, while in the truck category, Ford outspent Chevrolet by about $10 million in spot advertising, with network work expenditures very close.

Total local-market advertising by individual dealers rose 9 percent in 1986 to $339 million, from $311.1 million in 1985.

Long-time TV marketer Cal Worthington-Los Angeles led the pack. Worthington-Los Angeles' total spending declined slightly, but remained above $4 million. Cal Worthington-Seattle increased its spending 21 percent, while Cal Worthington-Sacramento boosted its budget 16 percent.

The result was that those three Worthington operations were in the top five in dealer TV spending and accounted for a total of $9.1 million in TV commercials in three West Coast markets.

Traditional big spender Potamkin Cadillac-New York whacked its TV ad budget by $1 million, or some 40 percent.

Import car sales could hit 3.4 million in 1987

By Roger Rowand

Foreign automakers are poised to take a bigger bite of the succulent U.S. car market.

Based on 1987 sales projections by the import companies compared to last year's sales, that larger mouthful will come despite the still weakening U.S. dollar.

The rise of imports will also fly in the face of the Japanese makers' agreement to restrict their imports to 2.3 million vehicles in the fiscal year starting April 1. That import total is unchanged from the number permitted into this country under the Voluntary Restraint Agreement (VRA) in fiscal year 1986.

The relationship of the dollar to foreign currencies — the exchange rate — is a critical element in the worldwide competitive picture, of course. When the dollar weakens, as it has recently against the West German mark and the Japanese yen, goods purchased overseas are theoretically less attractive to Americans who, when shopping for imports, may have to carry their money in a wheelbarrow rather than a wallet.

The value of the American buck versus the yen has plunged about 60 percent over the past two years and prices of Japanese cars have shot upward as a direct result. The dollar's value relative to the British pound has remained comparatively stable in recent months, although well below the usual of past years.

In general, this year's market conditions are similar to those of 1986. Last year there was a slight downturn in market share for imports, which was masked somewhat by a gain in unit volume.

Sales of foreign cars in this country dipped to 2,836,973 units last year from 3,237,647 in 1985, a drop of 12.38 percent.

In terms of market share, the imports took 24.77 percent of total U.S. sales of 11,452,310 units in 1986 and 29.32 percent of a total market of 11,041,513 in 1985, according to *Automotive News* data analysis.

However, the American International Automobile Dealers Association is predicting sales of at least 3,380,000 import cars in the U.S. this year — or nearly a 30-percent share of an estimated total of 11,380,000 passenger cars sold.

Many of this year's new import entries have optimistic forecasts for their first year in the competitive U.S. market.

Hyundai, whose Excel model went on sale but a year ago and immediately began setting sales-per-dealership records, has boosted its sales prediction several times. The most recent boost pushes the projection to 240,000 units this calendar year.

Last month the Korean company opened a Chicago-area sales office to serve 14 Midwest states where Hyundais had not yet been sold — a move it originally had not planned to make until early 1988.

More optimism, if more restrained, is demonstrated by purveyors of the Austin Rover Sterling. Austin Rover Cars of North America hopes to sell some 27,000 units in its first full year in the U.S. sales arena with that built-in-Britain entry.

The Range Rover is another new entry from the United Kingdom, and its importers expect to sell 2,500 in its first year then step sharply up to 5,000 in the second year and build from that base.

New from Europe, too, is the Renault Medallion. A first full-year sales forecast for that line puts the March-to-March total at 50,000 units.

Those expectations are dwarfed by those of the relative newcomer, Yugo, the Yugoslavian upstart many in the business said would fade quickly after a fast start out of the gate. The company expects to sell 70,000 units this year, up a rollicking 94.67 percent from the 34,959 cars delivered in 1986.

Volkswagen also expects a strong year with retail deliveries of about 240,000 units. That will compare with dealer deliveries of 143,318 in 1986 for a gain of 94.67 percent.

Audi deliveries, on the other hand, could fall 16.38 percent. The company said they plan to sell 50,000 units in the U.S., down from 59,797 the year before.

Alfa Romeo sales will climb substantially in terms of percentage — if not numbers of units. The gain is expected to be 21.94 percent as deliveries move to 10,000 cars from the 8,201 sold in 1986.

BMW sales are expected to move up to 100,000 units from the 96,287 sold in 1986. The importer regularly forecasts an annual 5-percent sales gain.

Jaguar importers say they anticipate a 10-percent increase in deliveries above the 24,464 units they brought in during 1986.

Mercedes-Benz importers are even more optimistic as they look in their crystal ball and see an increase in deliveries to 103,000 units from 1986's 99,314. That would indicate that a rise of 37.11 percent is coming, a healthy boost in any man's marketplace.

Ford Motor Co.'s Lincoln-Mercury Division expects plenty of action in its corner of the import sales ring. There will be a new entry wearing the Merkur badge, the Scorpio. It will join the slick two-door XR4Ti coupe. Sales of those two cars shape up this way in 1987, the division says: XR4Ti sales will move down to about 10,000 units from 14,315 in 1986, as sales of the new entry, Scorpio, will be between 6,000 and 8,100 units, Lincoln-Mercury said.

Tracer, the little Lincoln-Mercury entry-level car coming in from Mexico, is expected to account for about 40,000 sales in 1987, its first year in the U.S. The same car with the same name will be built in Taiwan for sale in Canada.

The Ford Festiva, from Korea, another entry-level offering new for 1987, is expected to ring up a sales total of between 65,000 and 75,000 units in its first year and then move to at least 85,000 for the next five years.

Peugeot sales are expected to remain close to the total of 17,000 brought into the country from France last year.

Porsche imports, too, are foreseen as remaining relatively stable at 30,000 or 31,000 units. In 1986, a total of 30,471 Porsche cars were sold in the United States.

Volvo sales this calendar year are seen climbing by an amount ranging from 1 to 9 percent, from the 113,267 units delivered in 1986.

The issue of how the Japanese "voluntary quota" of 2.3 million units will be divvied up among manufacturers was still up in the air at press time.

There was some speculation on the West Coast that the quota for new entries "will be taken out of the hide of people with large U.S. inventories."

That line of thought might mean the quotas of Isuzu and Mitsubishi might be cut by enough to allow new entries into the United States within the 2.3-million bogey.

In examining the Japanese import situation it must be remembered that Japanese car builders "are going like mad on building their own U.S. plants," in the words of one West Coast industry observer. In the years ahead that fact is going to ameliorate the impact of quotas.

Daihatsu Motor Co. is the last of the Japanese concerns to move toward North American production. That company, however, is negotiating with Bombardier Inc., a Canadian snowmobile maker, with a joint venture in the production of mini-vehicles and commercial vans in mind. ■

Import model count rises to 304

By John K. Teahen Jr.

For the first time ever, the number of imported-car models on the U.S. market has matched the number of domestic models.

The latest *Automotive News* tabulation found that there are 304 models from overseas and 304 models built in this country available to new-car shoppers.

The domestic total includes transplants — cars built in the U.S. by foreign manufacturers. There are 41 of them. If they were added to the import figure and deducted from the domestic count, the imports would have a wide edge.

The totals will change as the weeks go by. New imports, including the Mercury Tracer, Ford Festiva and Acura Legend two-door will be coming from overseas. And at least one model, the Subaru Brat, will be dropped from the car count and moved into the truck category.

The domestic marketers probably have a few spring models on tap, too. But, as of today, it's a dead heat — 304 imports and 304 domestics.

It was a different story a year ago. At that time, the domestics offered 321 selections, compared to 255 for the imports. The domestic makers are trying to stem the model proliferation; the imports apparently don't care to indulge in such activities.

There are more than twice as many import makes on the market as there are domestic lines. *Automotive News* counts 38 makes of imported cars on the U.S. scene vs. 17 domestics. Both numbers include the five transplants that have a foot in both camps — they make 'em here, and they bring 'em in from overseas. The transplants are Honda, Nissan, Renault, Toyota and Volkswagen.

The number of import models has doubled in the past 10 years. There were 152 in March 1977 and 304 today.

The 38 imported makes on the market today include only two newcomers from a year ago. Both are from Great Britain, and both are in the luxury class. They are the Sterling sedan and the Range Rover wagon.

Japan dominates the import model count just as it dominates the import sales statistics. There are 157 Japanese selections, not including the 19 Japanese cars assembled in this country by Honda, Toyota and Nissan.

West Germany is next on the list with 60 models, followed by Great Britain, 22; Sweden, 19; Italy, 19; France, 16; South Korea, 8; and Yugoslavia, 3.

Toyota leads the imports with 33 models, and Subaru is a step behind with 32. Mazda and Nissan are next with 20 apiece. The Nissan total suffers from "transplantitis." Ten Sentra models are assembled in the United States and, thus, are included in the domestic total. Toyota also has some U.S.-builts — three Corolla FX choices.

The domestic and import model totals are even, and there's not much difference in the breakout by body styles. The domestics have a few more four-door sedans; the imports have a few more two-door selections. The imports are ahead in convertibles; the domestics lead in wagons.

Here's the comparison:

	Imports	Domestics
4-door models	116	119
2-door models	134	129
Convertibles	16	13
Station wagons	38	43
TOTALS	304	304

There's only one two-door model among the 81 station wagons. That is the new Brazilian-built Volkswagen Fox.

In both the import and domestic camps, the makers often call their hatchbacks three-door or five-door models. *Automotive News* takes the traditional approach; only the side doors are counted.

In counting import models, *Automotive News* uses the same criteria as in tabulating domestic cars. A choice of transmissions (four-speed, five-speed or automatic) or a choice of engines (gasoline or diesel) does not necessarily constitute a separate model.

Vans and sport/utility vehicles are excluded from the totals for both imports and domestics.

Turbo units and four-wheel-drive cars are counted separately when they are priced that way. It is felt that they have enough differences in trim, equipment and mechanicals to merit separate-model designation.

Targa-type autos — those with removable solid roof panels — are listed as two-door models, not as convertibles.

As noted, cars that foreign-based manufacturers assemble in the United States are included in the domestic total, not the import total. ■

Hyundai gets parts locator

Hyundai Motor America has added a national parts locator to its Dealer Intercon System, developed by ADP Dealer Services.

The national parts locator will allow Hyundai dealerships to locate and sell parts instantly across a city or the nation.

Bruce Campbell, group vice president-parts, service and information services for HMA, said, "The parts locator will speed up parts and servicing in our dealerships. That means the ultimate benefactor is our customer."

All 165 Hyundai Dealer Intercon on-line dealerships will have the national parts locator installed by May. As new Hyundai dealerships open, their systems will automatically include the parts locator. ■

Ford boosts Halla investment in South Korea

The South Korean government has given permission to Climate Control Division, Ford Motor Co., to increase its investment in Halla Climate Control Co. in Seoul from $3 million to $8 million.

Halla, a 50-50 joint venture between Ford and South Korea's Mando Corp., will launch production of radiators in June and air conditioners at a later date, both for export to Ford in the United States and South Korea. Mando indicated it would boost its investment in Halla by $5 million to retain its 50 percent equity. ■

Japan imports record high

The total number of registrations of imported cars in Japan in 1986 hit a record high with an increase of 36 percent over the previous year. By country, imports from all major automobile producing nations registered increases over the previous year.

Ground broken on new Mazda computer center

A $1 million computer facility is under way in Irvine Spectrum, Calif., for Mazda Motors of America (Central) Inc.

The 5,000-square-foot center, with a 1,500-square-foot area reserved for future expansion, was designed and is being built by Computer Facilities Services Group Inc., Cypress, Calif.

It's part of a $16-million, 118,-700-square-foot Mazda Motors headquarters building that will be completed by April.

The computer room will house the IBM 3083 mainframe, and will be used by Mazda dealers in 31 states, who will be on-line to the 3083 for vehicle part and parts inventory and ordering. ■

German imports: Japan's favorites

Sales of imported cars in Japan in January rose 38.2 percent over the same month the year before to 4,170 units, marking the 37th consecutive monthly increase, according to the Japan Automobile Importers Association.

JAIA said imports from West Germany recorded the highest sales in January with 3,128 units, up 31.4 percent from 1986 for 75.0 percent of the import market.

West German cars took the top four spots on the best-sellers list, led by Mercedes-Benz with 1,031 units, up 72.4 percent from a year ago. Volkswagen followed with 914 units, up 16.3 percent; BMW with 681 units, up 3.2 percent; and Audi, with 416, up 40.1 percent.

By nations of origin, United Kingdom sold 242 units, up 44.0 percent and 5.8 percent of the market; France, 148 units, up 224.2 percent and 3.6-percent market share; Italy, 199, up 28.4 percent and a 4.8-percent share.

Other countries and the number of cars sold in January compared to the year-ago month: Sweden, 256 units, up 73.0 percent for a 6.1-percent market share; United States, 187 units, up 103.3 percent for a 4.5-percent market share; all others, 10 units, up 42.9 percent and share of 0.02 percent.

General Motors sold 140 units; Ford, 34; Chrysler, nine; and American Motors, four. ■

Toyota fires up Australian plant

Toyota Motor Corp. will begin building about 30,000 Camry cars and station wagons annually in Australia this spring.

Toyota's joint venture with Australian Motor Industries Ltd., is assembling Corona and Corolla cars at an annual rate of about 50,000 units. Engines for the cars are supplied by another joint venture, Toyota Manufacturing Ltd.

Toyota said it will stop making Corona cars in Australia because of shrinking sales and replace it with the 2.0-liter Camry. Camry cars and wagons eventually will be exported to other countries, including New Zealand. ■

Comeback is seen for China's output

The Chinese auto industry is expected to bounce back in 1987 from last year's poor showing and produce about 365,000 vehicles, an increase of 3.1 percent above last year's output.

China's Xinhua News Agency quoted the China Automobile Industry Corp. (CAIC) as saying the industry will increase light truck production 3.6 percent over last year to 136,200, while cutting back production of medium trucks about 6 percent. CAIC said Jeep and car output will be increased slightly, but did not disclose figures.

Production in 1986 dropped to 354,000 units, about 11.5 percent down from last year's 400,000.

The decrease was attributed to a surplus of imported vehicles in the country and a fuel shortage. The government has since raised tariffs more than 200 percent on some imported vehicles. ■

Car output in U.S. dips 4% for 1986

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production for the 1986 calendar year dipped 4.35 percent from the 1985 total.

According to the companies' revised figures, 7,829,697 cars were assembled last year. That compares with 8,186,040 in 1985.

Five companies reported production gains over the prior year.

New United Motor Manufacturing Inc. more than tripled its production to 205,854 vs. 64,601 in 1985; Honda of America Manufacturing Inc. was up 70.75 percent to 248,159 from 145,337; Nissan Motor Manufacturing Co., U.S.A., rose 48.70 percent to 65,147 from 43,810; Ford Motor Co. climbed 7.83 percent to 1,764,316 from 1,636,150; and Chrysler Motors advanced 1.71 percent to 1,287,659 from 1,266,068.

Three manufacturers reported lower production in 1986 than in 1985.

American Motors was down 55.52 percent to 49,435 from 111,138; General Motors built 4,124,730 cars, down 14.47 percent from 4,822,478; and Volkswagen of America dipped 12.50 percent to 84,397 from 96,458.

Three nameplates topped 300,000 units in 1986 production. Chevrolet Cavalier, with 395,154, was the leader for the third consecutive year; Ford Escort was second with 378,359; and Ford Taurus was third with 335,669.

Oldsmobile 88 was fourth with 272,318, and Chevrolet Celebrity was fifth with 257,983.

January output drops in Japan

TOKYO — Japan's production of cars, trucks and buses in January slipped to 936,916 units, down 3.3 percent from last year. It was the fourth consecutive month that output trailed the year-ago total.

Production declined 5.0 percent in October, 9.6 percent in November and 3.2 percent in December. The Japan Automobile Manufacturers Association attributed the slump to declining domestic sales and exports.

Car production in January dropped to 593,241 units, down 3.9 percent from a year earlier. Truck output declined 2.3 percent to 340,428 and buses were off 1.4 percent to 3,247 units.

JAMA said cumulative output of vehicles for the period from April 1986 (the beginning of the Japanese automakers' fiscal year) through January totaled 10,093,102 units, down 1.8 percent from the same period a year earlier.

Domestic sales in January dropped 2.2 percent to 300,699 units, JAMA said.

Passive-restraint study gets $100,000 from GM

DETROIT — General Motors has given a $25,000 grant to each of four finalists in the automaker's University Design Competition on Passive Restraints for Automobiles.

The schools are Tennessee Technological Institute, Purdue, Texas Tech and Duke. In mid-April, a winner will be named and awarded $100,000.

Moonroof for Chrysler LeBaron J-coupe
Sky-Top Sunroofs Ltd., St. Louis, announces the availability of a power moonroof to fit the 1987 Chrysler LeBaron J-coupe. The sliding glass panel is electrically operated.

Michelin to produce tires in Korea with local firm

By Oles Gadacz
SPECIAL CORRESPONDENT

SEOUL, South Korea — France's Michelin has become the first foreign tiremaker to invest in a Korean operation.

The company has entered into a 50-50 joint venture with Wuongpoong, the country's third largest tiremaker.

The announcement follows the failure of Wuongpoong and Goodyear to reach an agreement for a joint venture after more than a year of negotiations.

Discussions are under way for the newly formed Michelin Korea Tire Co. to supply tires to Daewoo Motor Co. and Hyundai Motor Co. Michelin Korea also is looking to Japanese manufacturers for original-equipment business.

The new company will make Michelin brand radial tires at a plant in Yangsan, about 300 miles southwest of Seoul. Plans call for the production of 1.7 million tires this year. By 1990, manufacturing capacity is scheduled to reach 5.3 million car tires and 250,000 truck and bus tires.

By that time, Michelin Korea expects to be exporting $100 million worth of tires throughout the world.

The domestic sales target for 1990 is just over $23 million.

Among Michelin Korea's competitors are Kumho, which manufacturers under license from Uniroyal and supplies Daewoo; and Hankook, which has links with Yokohama and supplies Kia Motors.

The Franco-Korean venture was established with initial capital of $35.3 million, which will be increased $76 million by next year, according to Wuongpoong.

SALES

Late sales rally isn't enough

Domestics decline, imports steady in February

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of new cars built in the United States climbed in the final sales period of February. But the gain of 6.69 percent wasn't beefy enough to offset earlier slow sales, and the month ended with sales 6.60 percent below those of a year earlier.

The falloff came in spite of incentives flamboyantly proclaimed in attempts to lure more buyers into showrooms.

Deliveries of domestic cars in the month totaled 556,953, compared with 612,632 in February 1986.

Sales of imported cars in the month were virtually unchanged at 220,162 units, compared with 219,433 units a year earlier.

The imports claimed 28.33 percent of total U.S. sales of 777,115 new cars, compared with 26.37 percent of 832,065 in February 1986.

A decline in the daily selling rate for U.S.-built cars that began in the middle of the month continued.

Where the market was February 1987

	Total Sales	Pct. of Total
SUBCOMPACT	122,769	15.80%
COMPACT	138,960	17.88%
INTERMEDIATE	189,168	24.34%
STANDARD	59,847	7.70%
LUXURY	46,209	5.95%
IMPORT	220,162	28.33%
TOTAL	777,115	100.00%

The rate eased to 20,402 cars a day from 20,889 in mid-month. However, at an average of 20,853 for all of February, it was well above the daily average selling rate in January of 16,202.

In February 1986, the daily selling rate was 25,526 cars per day.

In an otherwise undistinguished month in terms of sales, Honda dealers delivered 90.28 percent more Ohio-built cars than they did in February 1986.

A gain of 6.90 percent was reported by Ford Motor Co. domestics and one of 5.22 percent by Nissan for its U.S.-built cars.

A drop of 61.36 percent was noted by American Motors while Volkswagen dealers sold 35.16 percent fewer U.S.-built cars.

General Motors dealerships delivered 20.94 fewer domestic cars and those of Chrysler 2.26 percent fewer.

In the month's final period, AMC rang up a decline of 65.34 percent, Volkswagen 42.52 percent and GM 7.10 percent.

Honda sales climbed 96.13 percent. Chrysler's were up 11.29 percent. Nissan dealers' climbed 35.80 percent and Ford dealers 29.32 percent. Figures are for U.S.-built cars only.

Toyota, the eighth U.S. maker and in its first year as a builder of cars in this country, sold 2,098 California-built cars in the month.

There were seven selling days in the Feb. 21-28 period this year and last. There were 24 selling days in February in both years.

Dispatches from the market-share front at the close of February indicated a state of flux with gains and losses spread across the board.

Ford's share of the total market increased to 20.21 percent from 17.65 percent in February 1986. Chrysler's increased to 10.10 percent from 9.65 percent, while Honda's share grew to 3.58 percent from 1.76 percent. Nissan's share rose to 0.94 percent from 0.83.

GM's piece of the industry sales pie was reduced in the month to 35.77 percent from 42.25 percent a year earlier.

AMC's market share was 0.34 percent, down from 0.78 percent. VW's was 0.49 percent, off from the 0.71 percent of a year before.

Toyota took a 0.24 percent slice of industry sales in the U.S. with its U.S.-built cars during the month.

Imports took a 28.33 percent market share in February this year and 26.37 percent a year before.

There was a similar degree of shifting in shares of the February domestic car market as well, according to Automotive News analysis.

GM's share of sales of cars made in this country dipped to 49.91 percent from 57.39 a year before. AMC's share fell to 0.46 percent from 1.06 percent. VW's dipped to 0.68 percent from 0.96 percent.

Ford's share of the domestic market this February was 28.19 percent, up from 23.98 percent a year earlier. Chrysler's rose to 14.10 percent from 13.10 percent while Honda's rose to 5.00 percent from 2.39 percent. Nissan posted a rise to 1.29 percent from 1.12 percent and Toyota's share of domestic sales was 0.37 percent.

Claude N. Moore, vice president in charge of the GM Customer Sales and Service Staff, had an upbeat comment on the month's results.

"GM sales in February began their recovery from the low point reached in January," he said. "We expect the improvement to continue in coming months.

"Economic factors, including positive consumer attitudes about buying a new vehicle, remain favorable," he said.

Moore described customers in the current market as being "very value conscious."

Ford Motors' Louis E. Lataif, vice president sales operations, North American Automotive Operations, said the market in February was weaker than he had expected it would be.

February auto output trails 1986 total

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers built 696,195 car during February, 8.91 percent more than January's 639,223 but 0.93 percent below the year-ago months 702,698.

Last week's targeted production of 174,802 was 0.48 percent more than the previous week's 173,965 but was 4.23 percent below the year-ago week's 182,516.

So far this year, 1,508,897 cars have been assembled, 7.74 percent less than the 1,635,446 completed last year at this point.

Companies split last week's scheduled output as follows: General Motors, 52.13 percent; Ford Motor Co., 24.97 percent; Chrysler Motors, 13.16 percent; Honda of America Manufacturing Inc., 4.18 percent; New United Motor Manufacturing Inc., 2.29 percent; Nissan Motor Manufacturing Co., U.S.A., 1.67 percent; Volkswagen of America, 1.14 percent; and American Motors, 0.46 percent.

GM will lay off 3,500 workers today (March 9) at its Lansing, Mich., plant for inventory adjustment. They are scheduled to return March 23. Two car lines will be affected, Buick Somerset/Skylark and Oldsmobile Calais. The plant will continue to assemble the Pontiac Grand Am.

GM's Detroit-Hamtramck plant is down this week for inventory adjustment, affecting 2,000 workers. The plant is expected to resume output March 16.

GM's Norwood, Ohio, plant is idle this week because of a material shortage. The shutdown idles 3,500 workers. The plant is expected to resume output March 23.

Chrysler's Belvidere, Ill., plant goes down today (March 9) for an 18-week model changeover. A total of 2,800 workers will be on temporary layoff during that period.

When the Belvidere plant resumes output, it will produce the full-sized Chrysler New Yorker and the new Dodge Dynasty four-door sedans instead of the Omni/Horizon models which were previously assembled there.

Saturday (March 7) overtime was slated for GM's Linden, N.J., plant.

Ford scheduled Saturday overtime at its Dearborn, Mich., plant.

Daily overtime is scheduled for all Ford plants this week.

Chrysler had no Saturday overtime scheduled, however its Newark, Del., and Sterling Heights, Mich., plants are slated for daily overtime this week.

Truck production sets record

Truck production in February was an all-time high for that month. Output of 321,017 trucks topped the previous February record of 308,358 in 1979.

Last month's build was 2.98 percent higher than January's 311,736 and 8.65 percent higher than the year-ago month's 295,452.

Last week's scheduled output of 80,063 trucks was 0.63 percent more than the previous week's 79,560 and 7.61 percent more than the year-ago week's 74,403.

Year-to-date, 700,561 trucks have been built, 3.63 percent more than the 676,025 completed last year at this time.

General Motors slated Saturday (March 7) overtime at its Baltimore, and Pontiac, Mich., plants.

Ford Motor Co. scheduled Saturday overtime at three plants: Wayne, Mich.; Kansas City, Mo.; and St. Louis.

All Ford plants are slated for daily overtime this week (March 9).

Chrysler Motors' Warren, Mich., plant is scheduled for daily overtime this week.

Week's output climbs in Canada

Auto production in Canada totaled 79,181 units in February, 6.14 percent more than January's 74,603 but 10.80 percent below the year-ago month's 88,772.

Last week, automakers targeted production at 17,820 cars, 4.75 percent more than the previous week's 17,012, but 26.14 percent below the year-ago week's 24,214.

So far this year, 171,579 cars have been assembled, 14.98 percent below the 201,618 built last year at this point.

Truckmakers produced 68,222 units during February, 9.55 percent more than January's 62,277, but 10.33 percent below last February's 76,081.

Truck production totaled 18,223 units last week. It was 3.22 percent more than the previous week's 17,655, but 5.87 percent below the year-ago week's 19,360.

Year-to-date, 148,716 trucks have been built, 16.28 percent below the 177,642 assembled last year at this time.

Toyota pushes Tercel; boosts supply, ads

By Cleveland Horton
CRAIN NEWS SERVICE

TORRANCE, Calif. — Toyota Motor Sales U.S.A. is responding to price competition from Detroit and other imports by boosting inventory and ad spending for its Tercel line.

Toyota is devoting 100,000-plus of its estimated 620,000-car allocation to its lowest-priced Tercel series. Toyota plans to import 33 percent more Tercels during the 1987 model year than in 1986.

In addition, Toyota will triple its second quarter Tercel ad spending to $5 million, representing one-fourth of its total car advertising for the period.

Toyota has begun airing a new 30-second TV commercial backing the midyear introduction of the $5,848 Tercel EZ.

"We hadn't advertised the Tercel a lot," said George Borst, corporate marketing manager. "But we want to show that we're not abandoning the low end."

The effort to preserve its share of the entry-level market follows Hyundai Motor America's stunning first-year sales of 201,328 Excels. However, Hyundai is only one of many auto marketers — both foreign and domestic — entering the under-$6,000 category.

Borst acknowledged that the Tercel ad spending is disproportionate to its volume. Toyota sold 76,914 Tercels last year, about half the number of either of its best-selling series, Corolla or Camry.

For Camry, Toyota will air a new 30-second spot promoting its high score for trouble-free operation in a survey conducted by J.D. Power & Associates.

Meanwhile, Toyota plans to break with tradition and respond directly to the extended warranties now being offered by Detroit automakers. A newspaper ad in USA Today and the Wall Street Journal says: "The Best Vehicle Warranty in the World. Toyota Quality."

"The issues raised by (the domestic auto marketers) is that warranties equal quality," Borst said. "It's just the opposite. If the quality was there, there wouldn't be a need for the warranties."

Toyota usually refrains from direct responses to claims of U.S. automakers, but in this case, "they attacked us in Toyota's backyard — quality," Borst said.

INSIDE AUTO PACT

For 22 years, the U.S. and Canada have traded cars freely — but how long will it last?

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

On most any day, hundreds of car haulers rumble across the Ambassador Bridge, past the Canadian and American flags that mark the border over the Detroit River, and on to destinations all over the United States.

Haulers — and barges, too, when the river isn't frozen — loaded with cars, trucks and vans are not an unfamiliar sight to those who commute between the Motor City and Windsor, Ontario. Canada shipped $11.8 billion worth of passenger cars to the U.S. last year — more than twice the amount we delivered to our northern neighbor.

That figure — combined with sparkling new plants in such places as Bramalea, Ontario — is testimony to the strength of Canada's auto industry. And much of that vigor stems from 22 years of barrier-free trade brought about by an agreement known as the U.S.-Canada Auto Pact — a pact that in recent months has come under fire.

Chrysler is planning to dismantle AMC

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. expects to dismantle American Motors and absorb the company into Chrysler Motors by the end of the year if its planned purchase of AMC is completed by mid-June.

Acquisition costs vary depending "on how you keep score," Chrysler Corp. Vice Chairman Robert S. Miller Jr. told Automotive News. Miller said the price could mount to $2 billion.

Initially, AMC will be a free-standing subsidiary of Chrysler Corp., if the planned purchase receives the approval of the AMC board of directors and stockholders and the U.S., French and Canadian governments.

"The free-standing subsidiary concept will only be transitory," Chrysler Corp. Vice Chairman Bennett E. Bidwell said in an interview with Automotive News. "If the deal is consummated, it would be our intent to bring it within the purview of Chrysler Motors expeditiously."

Bidwell declined comment on when the subsidiary would be absorbed into Chrysler Motors. A source said the action would be expected by year-end.

The intended purchase of AMC will give Chrysler the Jeep products described by Chrysler Chairman Lee Iacocca as "the best-known automotive brand name in the world;" a new $400 million assembly plant in Bramalea, Ontario, with an estimated annual capacity of 200,000 units; and a network of 1,472 AMC-Jeep-Renault dealers who will remain independent.

Addition of Jeep products will catapult Chrysler into the compact sport/utility vehicle market which accounted for 600,000 sales last year.

"If we should succeed in consummating the deal, we obviously would get a boost in truck penetration because of Jeep volume," Bidwell said, adding that the proposed acquisition "in terms of cars is not that big a deal at present."

Bidwell said Chrysler "would have no plans at this time to unilaterally expand the Jeep franchise."

The letter of intent between Chrysler Corp. and Regie Nationale Des Usines Renault, which owns 46.1 percent of AMC, provides that Chrysler will proceed with the planned manufacturing of the 1988 mid-sized Renault Premier at the Bramalea plant and will continue the AMC program to import the compact Renault Medallion. The Medallion went on sale this month.

Bidwell said Chrysler has "a commitment with Renault to serve as distributor of Medallion for a period of approximately five years but with no volume commitment."

Miller said Chrysler has agreed to sell at least 300,000 Premier units between 1988 and 1992 or else pay a penalty to Renault although there has been no decision under which brand name the vehicles will be marketed. Plans call for introducing the Premier this fall and the X59 coupe next year.

see AIR BAGS, page 57

THE PRIZES

Chrysler lured by AMC's new $400 million plant in Bramalea, Ontario, and by Jeep lineup

THE DEAL

- Chrysler Corp. pays an estimated $757 million to $1.1 billion to acquire American Motors.
- Chrysler's big gains are the Jeep line and name, and AMC's new $400 million Bramalea assembly plant in Ontario, Canada.
- The move could put Renault in the black for 1987 and hasten its privatization by the French government.
- Chrysler agrees to distribute the Renault Medallion and to manufacture the Renault Premier.
- Chrysler's timetable calls for finalization of the deal by mid-June.

AMC sale boosts Renault's recovery plans

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The decision to sell its controlling interest in American Motors may put Renault into the black for 1987 and hasten the French government's plans to make the state-owned company a private concern.

The move also appears to make Renault a more formidable competitor in Europe, where it can concentrate resources, while sacrificing ambitions to become a global automotive force.

Renault went to the brink with AMC, but with its own fragile recovery underway, decided at the last minute not to assume the full risk of a major new-product launch in the United States.

The French automaker decided to withdrew just as AMC was coming on stream with three promising new Renault models, a new assembly plant in Canada and a scaled-down cost structure that helped AMC achieve a fourth-quarter profit.

The deal holds out the prospect of closer collaboration between Chrysler and Renault on marketing and product development ventures. But industry analysts here question how well the two firms complement one another, especially in Europe.

The transaction also leaves several other unresolved issues:

- The long-term impact on French jobs linked to the United States.
- The future of Jose Dedeurwaerder, Renault sales and marketing director and former AMC president, who was seen as a strong supporter of maintaining the partnership.
- Plans for the low-volume, high-price Renault Alpine sports car scheduled to be introduced in the United States later this year.
- Renault's commitment to Mack Trucks, in which it holds a 42 percent stake.

Daimler-Benz battles itself

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — A "war" being waged in the boardroom at Daimler-Benz has apparently weakened the position of Chairman Werner Breitschwerdt and may speed his retirement.

Finance chief Edzard Reuter last week was given broad new powers as the company's unmistakable No. 2 man. Many observers view Reuter's new post of deputy executive chairman as a prelude to his eventual ascension to the top job — probably after Breitschwerdt's contract expires in late 1988, but possibly sooner.

The issue should come to a head later this year. Contract extensions at German companies are typically decided one year before expiration.

West Germany's largest, most prestigious industrial enterprise has reportedly been steeped in personal conflicts ever since Breitschwerdt was appointed chairman in 1983 over Reuter and passenger-car chief Werner Niefer.

But a series of external pressures and internal changes have brought Daimler's underlying hostilities to the surface.

For example, recent complaints from West German tax drivers about Mercedes-Benz quality pro-

Chairman Werner Breitschwerdt, right; new No.2 Edzard Reuter, below; and cars head Werner Niefer, below right

vided a forum for Niefer, one of Breitschwerdt's supposed critics on the board, to make a thinly veiled criticism of the chairman.

And a management board restructuring said to have been prompted by Reuter has given rise to further squabbling as board members consolidate power.

Reuter, the architect of Daimler's diversification strategy, has been widely viewed as Daimler's de facto chief executive. Some assessments of Breitschwerdt go so far as to brand him a figurehead chairman.

Though Daimler said last week that Breitschwerdt will retain all his duties and powers in the wake of Reuters's promotion, his authority seems undermined.

A few industry observers in West Germany said they expect Breitschwerdt to be unseated before his five-year contract expires in late 1988. But the pattern that appears to have emerged is one in which Reuter may assume the chairman's

$259 million lost by VW in foreign-currency scam

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Volkswagen Group said it lost $259 million (480 million German marks) last year as the direct result of a foreign exchange swindle involving corporate funds.

Despite the shortfall, VW said it will report 1986 net profits about the same as the 596 million marks achieved in 1985 — slightly better than forecasts — and that it will go ahead with planned dividend payments.

The 596 million marks is about $320 million at current exchange rates.

The automaker said, "It is strongly suspected that illegal activities to the company's detriment underlie Volkswagen AG's foreign currency losses." But few details were given.

The company's news release declined to identify the individuals or organizations suspected, but said a VW insider may have participated.

The announcement caused the price of VW stock to plunge on the Frankfurt exchange and also touched off speculation in the financial community about the nature of the fraud and who may be involved. And there was widespread dismay among analysts that VW let controls get so far out of hand.

"They have egg on their faces," said Stephen Reitman, a German specialist at Phillips and Drew in London.

Even acknowledgement that VW was hedging currency took many analysts by surprise last week. Volkswagen has said in the past that it is philosophically opposed to hedging as protection from dollar/mark swings.

TRADE: *Compromise bill allows president to use tariffs — not quotas — to curb imports*

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Trade legislation was unanimously approved by a key House subcommittee late last week. Leading Democrats toned down earlier proposals to win qualified support from the White House.

The bill moves to the full Ways and Means Committee this week.

The package is a combination of the bill approved last year by the House and a broad "competitiveness " bill prepared by the administration.

U.S. Trade Representative Clayton Yeutter called the subcommittee's bill "a substantial improvement" over last year's legislation. The breakthrough came when the chairman of the trade subcommittee, Sam Gibbons, D-Fla., and Ways and Means Committee Chairman Dan Rostenkowski, D-Ill., offered compromise legislation that toned down a provision setting mandatory reductions in the nation's trade deficit.

The so-called Gephardt amendment — named for sponsor Richard A. Gephardt, D-Mo. — had drawn threats of a veto from the Reagan administration because it called for import quotas against countries that do not reduce their trade surpluses with the United States.

The bill allows the president to impose tariffs against nations that maintain unfair trade practices, but not quotas.

Gephardt said he will try to restore the original language of his amendment this week.

Overall, the bill would make it easier for U.S. industries to win government protection from sudden increases in imports or unfair trade practices. It would provide more government aid for workers who lose their jobs due to imports.

The legislation makes changes in a workers' rights provision included in last year's bill by eliminating unfair wage and working conditions.

Trade observers here say Rostenkowski is attempting to lull the administration into accepting a tougher bill while persuading more-protectionist-minded Democrats that they should vote for a bill the president will sign.

Chrysler lobbies suppliers

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors has invited automotive suppliers to attend what is termed a "very important meeting" regarding trade legislation issues.

The meeting, to be held March 23 at the Michigan Inn, Southfield, Mich., will include presentations by Lee A. Iacocca, Chrysler Corp. chairman; David Platt, Chrysler Motors vice president — procurement and supply; Robert W. Galvin, chairman of Motorola Inc.; and other Chrysler executives.

According to a Chrysler source, 300 letters of invitation were sent.

At the evening gathering, suppliers will be asked to join together to express their views on trade legislation in order to "insure" that legislation adopted is "fair to the auto and auto supply industries."

Chrysler has been one of the most vociferous industry critics of U.S. trade policies, the trade deficit and the growth of import-vehicle sales and Japanese transplant operations in the United States.

Also speaking at the meeting will be Harold K. Sperlich, Chrysler Motors president, and Robert A. Perkins, Chrysler Corp. vice president — federal government affairs.

Chrysler may buy more in Brazil

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Chrysler Corp.'s Brazilian auto parts exports could climb to $75 million during the next model year.

Pedro Eberhardt, who serves as president of Sindipecas, this country's auto parts manufacturers' association, believes Chrysler may boost purchases from $28 million this model year.

Last month in Detroit, Eberhardt met with Chrysler Motors Chairman Gerald Greenwald and Conrad Cohen, the company's director of international procurement. He returned to Brazil convinced that Chrysler is seeking to increase its supplier base here.

Another source at Sindipecas said 10 Brazilian auto parts manufacturers currently sell parts to Chrysler.

The Sindipecas president sought to reassure Chrysler that, with the expected downturn in domestic demand in Brazil this year, the industry would have no trouble meeting export orders.

Diamond-Star may go to 60% U.S. content

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

TAMPA, Fla. — Chrysler Corp. and Mitsubishi Motors Corp. may increase to 60 percent the planned U.S. content of vehicles produced by their joint-venture company, Diamond-Star Motors.

Chrysler Motors Chairman Gerald Greenwald said currency exchange rates and more competitive parts manufacturing in the United States have caused Chrysler and Mitsubishi to re-examine their sourcing decisions.

"We once had thought we'd be buying about 60 percent of our components from Japan and only about 40 percent from U.S. suppliers. With the change in the yen, that ratio is beginning to flip-flop in favor of good old America," he told the annual convention of the American Car Rental Association here.

An official of the U.S. Commerce Department's Foreign Trade Zones Board in Washington said Chrysler is preparing an amendment to its subzone application for Diamond-Star. He said Chrysler is expected to reduce foreign content.

The Diamond-Star plant in Bloomington-Normal, Ill., is scheduled to begin producing cars in 1988.

Greenwald said Chrysler Corp. sees "1987, and the years immediately following, as an unparalleled opportunity for an American car company . . . to actually get the jump on the Japanese." He said Japanese vehicle manufacturers are "staggering" from currency changes.

"So far, the yen has strengthened by about 50 percent since September 1985," he said. "Think of that: How would you like to swallow a 50 percent price cut on virtually your only money-making operation?"

Greenwald added, "That, in essence, is what the Japanese are trying to live with right now. America was the only place in the world where they made money, and now they're taking a bath here — even a bigger bath as they try to cling to market share by refusing to raise prices significantly."

Greenwald said the Japanese are cutting back on research and development, closing plants and laying off workers in Japan. He added, "Hell, we even understand they're telling their executives to ride coach on the Bullet train. And some Japanese bankers are even hinting at the need for mergers in order to hold the industry together."

Greenwald added, "We see opportunity in all that Japanese distress."

He said Chrysler is committed to a program to cut costs by another 30 percent and to raise quality an additional 60 percent by 1991. It also is committed to a record investment program of $12.5 billion for new products and plant improvements during the same period, he said.

Chrysler previewed the new C-body Dodge Dynasty at the convention, along with a LeBaron J convertible. The Dynasty is a full-size, V-6-powered four-door sedan that will be introduced before the end of the year.

Greenwald said that the new Dodge Shadow and the Plymouth Sundance have captured 6 percent of their retail segment — "which just happens to be the same amount (Chevrolet) Cavalier has lost."

On the subject of retail incentive programs, Greenwald said, "Nothing would please me more than to be able to announce, right here and now, that Chrysler will never have another retail program. . . .

"But let's face it, as strong as we've become, little ole Chrysler still can't call the tune in the market place. All we can do — and we have to do it — is respond competitively when Roger Smith puts on his midnight-madness suit and starts in with the giveaways."

Chrysler previewed its forthcoming full-sized C-body car, Dodge Dynasty

Domestic stocks dip; import inventories up

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

New-car dealers managed to reduce inventories of U.S.-built cars last month, while stocks of imports grew a bit.

Because there were no broadsword slashes in U.S. production in February, the inventory reductions clearly reflect a quickening pace of sales.

The daily selling rate for U.S. cars in February averaged 23,206 units, up from 18,180 in January.

From a days' supply standpoint, the domestic-car situation improved significantly. The inventory of cars at dealerships and in transit on March 1 was sliced to an 81-day supply from the 105-day supply on Feb. 1. It remained substantially higher than a year before, however, when the days' supply was 73.

While improving as the year progresses, the domestic inventory situation still is far from bright. Industry authorities say the ideal supply is about 60 days.

The inventory of domestic vehicles as of March 1 stood at 1,869,591 units compared with 1,734,299 on Feb. 1 and 1,867,265 on March 1, 1986. The March 1987 figure was the highest since May 1986 when there were 1,945,048 U.S.-built cars in the stockpile.

The count of foreign cars in inventory at ports of entry, in transit to dealerships in the United States and at dealerships as of March 1 was 531,520 units, a record for March 1. The total compared with 471,547 on Feb. 1 and 333,893 on March 1, 1986, according to an Au-

Canadian workers don't expect miracles in new pact

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

As the Canadian Auto Workers (CAW) gears up for bargaining with the Big Three automakers this summer, union president Robert White has no illusions that a new era of cooperation and worker participation has dawned.

"It's good that some of these things are happening," he said, referring to new types of work structure such as team production.

But as for what he calls real participation — "the corporation giving up a significant part of its power to workers — I don't see any indication that's happening." he said.

Workers at General Motors' Ste. Therese, Quebec, plant recently became the first group in an operating Canadian plant to institute the team concept contractually.

"Workers are having more input into jobs on the shop floor," White said. "But they won't be making major decisions in the near future. We shouldn't fool people that we're moving toward that."

He said that is why the CAW is focusing on the realities of work in the auto factory and on making that work secure.

"Work life on the shop floor is improving, but we can't say we've found the solution to making people happy, because it's still work, eight hours a day, maybe for 25 years," he said.

"It's repetitive, it's fairly boring. We can't change it that much. We shouldn't try to fool people that we can."

White praised the strides made at the Ste. Therese plant under the leadership of Gary Henson, the new plant manager, and Paul Morin, new chairman of CAW Local 1163.

White

Recently, a year after being told their plant was in danger of closing, Ste. Therese workers learned they are to build the A-cars, which are being moved from GM's Oshawa, Ontario, plant so it can build GM-10 cars.

In September, workers at Ste. Therese approved a contract with reduced classifications and team production. At that time, GM of Canada President George A. Peaples said the new agreement made possible a new exploration of opportunities for the plant.

But White said that the work preceding the new agreement was as significant — if not more important — than the new contract.

"There is no question that Ste. Therese has turned around significantly," White said.

"I was down there for the announcement (that the A-cars would be built at Ste. Therese), and I was surprised at the good reception the workers gave the plant manager."

see WHITE, page 32

Sales rise 5.8% for light trucks; total is 351,450

Domestic retail light-truck sales climbed to 351,450 in February, 5.8 percent more than the 332,220 sold in February 1986.

The upsurge, following a fall-off in January, was fueled, of course, by wide-ranging sales incentives.

During the first two months of 1987, the industry retailed 627,539 light trucks, off from last year's 655,311 deliveries.

Ford, Chrysler, Nissan, Isuzu and Suzuki were all up from year-ago levels.

Suzuki had nearly a threefold increase in Samurai sales. Its Samurai is now outselling Mitsubishi's entire truck lineup.

Chrysler had a big spurt in sales, largely because of continuing gains by Dodge Dakota. Dakota outsold Dodge's full-sized pickups last month. Caravan/Voyager sales, however, continued to trail last year's total.

Ford turned in a strong performance, chalking up big gains for Bronco II and Aerostar. It also had increases across the full range of its truck lines.

Chevrolet is still awaiting the introduction of its new full-sized C/K pickups, which may push its sales up from last year when full production is reached.

Coltrans and Jupiter sign joint agreement

KENOSHA, Wis. — Coltrans Systems, Brentwood, Tenn., the parent company of Howard Sober Inc., has entered into a joint agreement with Jupiter Transportation Co. here, parent company of Kenosha Auto Transport Corp.

Jupiter will take over the heavy- and medium-duty truck transport business formerly run by Sober. Coltrans will assume control of Kenosha Auto Transport.

*Nissan includes domestically-built units in Tennessee

SUCCESS: *Volvo White moves up the sales ladder in heavy trucks, tops Ford for 4th place*

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

GREENSBORO, N.C. — Volvo White officials surprised themselves last year by taking 10.1 percent of the heavy-duty truck market and edging out Ford for fourth place in the U.S. industry's ranking.

In 1985, Volvo had only 8.8 percent of the market and ranked seventh in the field of eight heavy-truck competitors.

Thage Berggren, company president, credited part of the company's success to the introduction of the Volvo WE5 and FE7 last year and sharp sales increases in White Xpeditor and Integral Sleeper models.

White Integral Sleepers accounted for nearly 3,500 of Volvo White's 13,200 factory sales last year — 3.1 percent of total industry Class 8 sales.

The company had its third straight year of profitability in 1986, attributable in large part to improved efficiency. Berggren noted that last year, Volvo's New River Valley, Va., plant increased production by two trucks a day without increasing the workforce. In addition, the plant had a stable workforce -- it lost only one of its 1,000 manufacturing employees last year.

Volvo White accounted for 30 percent of the Sweden-based Volvo Truck Corp.'s worldwide sales last year. Volvo's worldwide heavy-duty truck sales were an estimated 43,700, up from 41,300 in 1985.

Volvo is now a strong third behind Daimler-Benz/Freightliner and Renault/Mack in worldwide heavy-duty truck sales.

The Daimler group ranked first in the worldwide market with about 59,000 heavy-duty truck sales — 39,000 for Daimler and 20,000 for Freightliner.

The Renault Group ranked second with 47,000 sales — 28,000 for Mack and 19,000 for Renault.

Volvo Truck Corp. followed with 43,700 sales, and Navistar ranked fourth with 31,000.

Preliminary figures for AB Volvo's other operations indicated that auto sales increased 6 percent and the bus business was up 8 percent, Berggren added. The parent company earned more than $1.2 billion in 1986 on sales of nearly $13 billion.

Berggren said the financial position of the parent company indicates that it has the resources to back a number of future ventures.

He said Volvo Truck Corp. has invested an average of 6 percent of its annual sales in product development during the past 20 years and that will continue.

Volvo GM Heavy Truck Corp., which begins operation in January 1988, has the potential to sell 18,000 heavy-duty trucks annually in the United States. That figure is based on the combined total of GM's and Volvo's heavy-duty sales in 1986. The company, however, has no firm sales projection for 1988.

Berggren said a joint venture was the quickest and most cost-effective method for Volvo White, which is 100 percent focused on heavy-duty trucks, to increase market share.

He said that heavy-duty truck manufacturers must increase their economies of scale if they are to survive. Given the mature markets for heavy-duty trucks in the United States and elsewhere, that is difficult to do without a joint venture, Berggren added.

He said that customers in the United States are looking for a wider variety of models to meet varying needs and that Volvo GM Heavy Truck Corp. will be able to supply them.

A new model for the 1990s will cost 10 times more to develop than it did in 1975, Berggren said. Despite the cost, customers are demanding new models at shorter and shorter intervals.

All of which argues in favor of Volvo's joint venture with GM, he said.

DDA says new diesel will have price edge

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

REDFORD, Mich. — Detroit Deere Corp. is introducing its new Series 60 diesel engine with prices 12 percent to 20 percent below those of competitive powerplants.

It is also shooting for 22 percent of the U.S. heavy-duty diesel market by 1992.

Its next major engine project, aimed for the early 1990s, is a new range of smaller powerplants for the off-road and light-to-medium-duty truck market.

The Series 60 engine, representing a $300 million investment, will be exported for use in Australian trucks later this year. It is also being evaluated for use in European trucks by two major truck manufacturers there.

The Series 60, the first production diesel with a fully integral electronic engine control system, is being offered by Freightliner, GMC, Kenworth, Peterbilt, Volvo and Western Star in the United States.

Meanwhile, Detroit Diesel Allison Division of General Motors and Deere & Co. are still putting together their $1.5 billion Detroit Deere Co. joint-venture firm.

DEDEC's formation will not be finalized until at least April 1 and possibly later, said Ludvik F. Koci, DEDEC chairman and chief executive officer.

"We told our employees that some of the things we're working on haven't been worked out yet," Koci said at a press conference here.

"The next target date is April 1 but there's nothing magic there. We're just continuing to work on some of the things that have to be settled. It's just very complicated."

Koci revealed that DEDEC is working on "smaller engines, every bit as dramatic as (the Series 60)" for the early 1990s.

"We don't know whether they will come to fruition or not," Koci added, noting that their primary target is the "off-road market and some truck applications in the light to small-medium truck" market.

"Those are just development programs, aimed for engines in the early '90s, if they come to pass. They'll be the next major project," he said.

Albin Kozel, manager of on-highway marketing for DDA, said DEDEC plans to get 20 percent of the North American heavy-truck market by 1990. Currently, DDA has about 5.5 percent of that market.

DEDEC expects to sell 3,000 to 3,400 Series 60 engines this year, 9,000 to 10,000 in 1988 and 18,000 to 19,000 in 1989.

The engine will be introduced in Australia in September by Western Star and Kenworth, Kozel added.

DEDEC is also talking with two European truck firms about its use there.

"I can't tell you who they are. We're not that far along," Kozel said. However, he pointed out that European-based Volvo and Freightliner are offering the engine in their U.S.-built trucks.

Freightliner, he added, has shipped engines to Europe for Daimler-Benz to examine.

Volvo, currently forming Volvo GM Heavy Truck Corp., is also a good prospect.

The Series 60's electronics carry a price premium which DEDEC has largely overcome by the efficiency of its engines' design (it has fewer parts than competitive powerplants) and its manufacturing/assembly operation, officials said.

They expect the electronics' price premium to fade as production volumes increase.

The engine was designed to meet 1988 emission standards, before they were pushed back to 1990.

Despite the electronics' expense, Kozel said, "if you went to the OEMs (truck manufacturers offering the engine) and asked to see their (published prices in the) data book, they would tell you the price of a Series 60 is probably between 12 percent and 20 percent less than any other engine you can buy."

Even with cut-rate prices, DEDEC will still be able to make a profit, Kozel said.

Aside from sheer production cost, company officials said the engine has so many benefits — reduced warranty costs, reduced maintenance and early warning of potentially costly repairs and downtime — that owners will reap a big bonanza in savings over the life of their vehicles.

Big sales drive for Series 60

REDFORD, Mich. — DEDEC's new Series 60 engine will be offered in 11.1-liter and 12.7-liter displacements, with horsepower ranging from 250 to 400.

The engine will have 50-state certification, and it will be offered by Freightliner, GMC, Kenworth, Peterbilt, Volvo White and Western Star in a variety of heavy-truck models.

Company officials expect fuel economy to be 2 percent to 15 percent better than competitors' engines. Based on surveys, they also expect the engine to have 28 percent fewer failures and a 25 percent longer life than current competitive diesels.

The engine already meets 1988 emission standards and will meet 1991 standards without particulate traps, officials said.

The engine has a 2-year/unlimited-mileage warranty, covering 100 percent of parts and labor. As an introductory offer for the 1987 calendar year, buyers will receive an extension of that service coverage to 3 years at no charge.

Extended 5-year/500,000-mile, 100 percent parts and labor warranty coverage also can be purchased.

As part of its all-out marketing effort, DEDEC has been trying to get as many early production units as possible into customers' production-model trucks. It formed joint implementation teams with truck manufacturers to expedite engineering and installation of the engines.

It is also putting as much emphasis on after-sale service support as on pre-sale support.

The Series 60 is built in a 300,000-square-foot area of DEDEC's main plant in Detroit, using a sophisticated flexible manufacturing system.

SERVICE MANAGEMENT

GE sees big market for recycled thermoplastics

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Electric is developing processes to recycle thermoplastics from scrapped automobiles.

Herbert K. Hoedl, general manager of the GE Plastic Group's Transportation Marketing and Technology Department, said, "Because the automotive industry, more than any other industry at this time, stands to be the focal point for recyclable plastics, we recently launched a program on recyclability of automotive parts."

GE announced its plans to recycle thermoplastics at a press conference held in conjunction with the recent SAE convention.

GE plans to develop technology that will allow thermoplastics used in automobiles and packaging — both relatively short-term uses — to be recycled into construction materials. GE officials said thermoplastic materials also can be used in other industries.

Uwe S. Wascher, vice president and general manager of the Plastics Marketing Division of the GE Plastics Group, said, "Instead of being shipped to scrap metal dealers, discarded automobiles will be shipped to plastics converters. Since the value of old automobiles won't be tied to rusting metals, but to high performance, non-degradable thermoplastics, plastics conversion will become a new industry."

GE officials said plastics in industry will become as common as steel, paper and glass.

They said recycled thermoplastics retain much of their structural strength and are well suited for use in the construction industry. Recycling generally involves grinding up thermoplastic components and then remolding them.

GE is studying methods for recycling auto plastics, seen here on the front fascia

Wascher said engineering plastics can replace wood and metal in the construction industry.

He said, "We have an opportunity to make a dramatic improvement in productivity in an industry where little productivity exists. Using our expertise in computer-aided design and engineering, in processing and in materials technologies, we can design and build houses in the highly organized way automobiles are designed and manufactured."

Since mid-1986, Hoedl said, GE has been removing thermoplastic parts from cars in Detroit-area scrap yards and studying the feasibility of re-using them. The parts are sent to GE's Pittsfield, Mass., headquarters, categorized (there are types of thermoplastics), cleaned and tested.

Hoedl said, "The first results clearly indicate that even after six to 10 years of use on the road, the remaining properties of Noryl, Lexan and Valox (GE thermoplastics) are still above and beyond the virgin properties of most commodity plastics."

GE claims that its thermoplastic materials offer an advantage over the "thermoset" materials with which they compete in the auto industry.

Hoedl said, "By definition, a thermosetting material is non-recyclable. It takes a permanent set, chemically, and cannot be re-used. The thermoset part can only be disposed of, used as landfill or burned . . . However, a thermoplastic material is, by definition, recyclable because it undergoes a strictly physical change. There is no chemical change."

GE officials also claim their thermoplastic materials are compatible and can be combined in the recycling process.

Hoedl said, "With GE plastics, we can take a headlamp and a bumper or fascia, regrind them together and remold the combined materials into another part."

He added, "There are many ways to facilitate the creation of a vital new recycling industry in plastics. For example, parts can have molded-in bar codes, designating when and where the part was produced and out of what material. Bar-code readers can then assist in the reclamation and identification of automotive parts."

GE officials said 200 million pounds of engineering plastics were used in U.S. automobiles in 1985, and by the late 1990s there will be 10 million cars on the road with all-plastic bodies.

Thermoplastics, Hoedl said, will eventually be used for structural components in automobiles. He said GE is developing a fiber-reinforced thermoplastic called AZMET that can be used in structural automotive applications.

Wascher said, "Clearly, our planet's limited resources demand that recycling is both an economic and a social imperative. To some degree, suppliers of traditional materials such as glass, metals and paper have recognized this and have instituted comprehensive recycling systems."

He added, "Furthermore . . . traditional materials have always been degradable . . . they eventually returned to the natural cycle of things. But up until now, the plastics industry — the first industry to produce high-volume materials that are virtually non-degradable — has not made major efforts to recycle its materials."

Wascher said some people in the plastics industry have suggested that degradable plastics should be developed, but he said such materials would be wasteful.

He said, "Our developing those (degradable plastics) technologies will only insure that we continue to promote inefficiency and waste associated with using degradable materials. Engineering plastics are high performance not only because of their property characteristics, but because they do not decompose."

Also at the press conference, the GE Plastics Group announced it has formed a Plastics Transportation Engineering Center to provide plastics engineering and design services. The center is based at the company's Pittsfield headquarters and other facilities are located in Detroit; Louisville, Ky.; Schenectady, N.Y.; and 14 other sites around the world.

In addition, the company announced an alliance with Sherwin-Williams Co., calling for Sherwin-Williams' Chemical Coatings Division to handle the marketing and technical service for GE's silicone hardcoating (a clear coating commonly used in automotive lighting systems) technology.

GE said its silicone hardcoating technology has applications for automotive exterior uses as well as in optical and sporting goods markets.

Shop business declines a bit for January

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships took a dip as 1987 began, following a strong showing in the last month of 1986.

The Automotive News Service Index showed that shop business at dealerships fell 1.7 percent in January compared with January 1986.

Shop business in December 1986 was up 8.7 percent over the year-earlier month, and business for all of 1986 was up 5.3 percent over 1985.

A number of dealers tied their lagging service volume to slow new-car sales during January.

A Southern Oldsmobile dealer said, "New-car sales decreased. Therefore, pre-delivery, service and new-car adjustments slowed. Also, the number of customers returning for service decreased, reducing total gross."

A Western Chevrolet dealer said "Business was down from 1986, but still profitable."

He attributed the slowdown to a soft economy and "no new-car sales to keep warranty sales up."

A Northwest Dodge-BMW dealer whose service business decreased said, "The car business, including service and parts, almost dried up in January."

Among dealerships with service increases in January, a Northeast Chevrolet dealer said service business increased "due to increased sales in the later part of 1986."

SERVICE INDEX
98.3*

	January, '87 vs. January, '86
Gross Profit on All Labor and P&A Sales	– 1.0%
Repair Orders Written	– 9.8%
Total Labor Sales (Customer & 'Warranty)	+ 1.0%
Shop Parts Sales (Customer & Warranty)	– 0.7%
Sales of All P&A	+ 1.8%

*—Survey by Automotive News shows that dealers' service and parts business in January 1987, was 98.3 percent of business in January 1986.

A Midwest Ford dealer attributed an increase in service business to "seasonal warranty work."

A Northwest Oldsmobile dealer said his increase resulted from advertising, changes in the weather and an excellent service department.

Indicators during January were mixed.

Sales of parts and accessories (customer-paid and warranty) registered the biggest gain in January 1987, up 1.8 percent over January 1986. Total labor sales (customer-paid and warranty) gained 1.0 percent over the previous year.

Shop-parts sales (customer-paid and warranty) fell 0.7 percent in January 1987. Gross profit on all labor, parts and accessory sales dipped 1.0 percent. Repair orders written dropped 9.8 percent in January 1987. Repair orders often lag behind other indicators.

Parts and accessory sales to off-premises customers were up 3.7 percent in January.

Warranty costs linked to quality

SHOP TALK

ARTHUR FLAX

Domestic auto manufacturers made much of their improved quality when introducing extended warranty policies recently. Those claims are not all smoke, according to a domestic industry source who studies such matters.

Warranty costs, the source said, are directly related to the manufacturing process — how well the car is put together.

However, the source admitted that domestic manufacturers still have to play catch up to the Japanese in quality.

The source said, "Toyota is generally believed to have the lowest warranty costs of all car manufacturers, and all of the Japanese are clustered together in terms of warranty costs. American and European cars are also clustered together, down a tier."

However, he noted, "If you look at a given car line, a lot depends on how the cars are driven. A Fiero, for example, might be driven a lot harder than a Monte Carlo and repair costs would reflect that."

Dealer survey

Most dealers and service managers who participated in an informal Automotive News survey asking them to predict the effects of longer domestic warranties on shop business said the warranties would boost profits and add to customer satisfaction.

Although the jury is still out on the effect of the long warranties on service contracts, rustproofing and other dealer profit centers, dealers and shop managers are apparently looking forward to increased business.

Some dealers were concerned that warranty labor charges would be based on those in the manufacturers' flat-rate books — which are lower than those in the independently produced books on which most non-warranty repair labor prices are based. However, many said the longer warranties would allow them to make up for the lower labor rates in other areas.

An Eastern Chevrolet dealer said, "Business should increase due to customers having to return to the dealer for repairs under the extended warranty. This gives the service department the opportunity to look the vehicle over and sell more maintenance repairs."

A Midwest Cadillac dealer said the longer warranty "will tie the customer to the dealer service department for a longer period of time. It will switch the labor rate from customer to warranty, but the total of the two (rates) should be up."

A Southern Oldsmobile dealer predicted service business would increase as more customers return to the dealership rather than going to independent garages and service stations.

A Midwest Ford dealer said the longer warranties "will fill in some of the gaps from time to time and probably force us to hire new personnel to keep up.

On the other side of the coin, a Northeast Chevrolet dealer responded that service business "will decrease customer labor (as billing will be through the factory labor rate book) and, as a result, will mean decreased gross profit."

And a Western Chevrolet dealer said, "Unless the sale of new units goes up drastically, it will not have a great effect. It should tie the vehicle to dealer service, though.

Chevy truck quality

Chevrolet and GMC have established a toll-free telephone number to monitor the quality and detect early problems with the new C/K pickup trucks. The number is intended only for use by dealers.

In a recent Chevrolet/GMC truck service bulletin, dealers were told, "Our goal is to uncover all problems, whether they are parts, assembly or engineering, and to produce a 'World Class' vehicle."

Dealers were encouraged to call the number "as early as your pre-delivery inspection to report any problem observed or experienced with this vehicle."

The bulletin also said, "The 800 number is intended to gather valu-

INVENTORIES

FROM PAGE 5

tomotive News analysis.

Stocks of imported cars on March 1 were the equivalent of a 58-day supply compared with a 62-day level a month earlier and a 37-day supply a year earlier.

Stocks of imported trucks on March 1 totaled 222,077 units, up from 206,132 on Feb.1 and 138,800 on March 1, 1986.

For comparison purposes, it is interesting to note that imported-truck inventories on March 1, 1985, were 87,383 units, or a 30-day supply, and on March 1, 1984, only 62,893 units, the equivalent of a 34-day supply.

The combined inventory of foreign-made cars and trucks amounted to a 62-day supply on March 1, compared with a 68-day supply as of Feb. 1 and a 39-day supply on March 1, 1986.

By companies, the March 1 domestic new-car inventories as a percent of the total were virtually unchanged from a month before and shaped up this way: General Motors, 57.02 percent; Ford Motor Co., 23.96 percent; Chrysler Motors, 14.80 percent; Nissan, 1.37 percent; Volkswagen, 1.05 percent; American Motors, 0.97 percent; Toyota, 0.47 percent; and Honda, 0.36 percent.

At the beginning of February, the inventory was divvied up like this: GM, 56.91 percent; Ford Motor, 23.79 percent; Chrysler, 15.03 percent; Nissan, 1.33 percent; Volkswagen, 1.12 percent; AMC, 1.00 percent; Toyota, 0.50 percent; and Honda, 0.32.

By size class, the March 1 domestic new-car stockpile consisted of 37.25 percent intermediates, 21.07 percent compacts, 19.83 percent subcompacts, 12.35 percent standard-size cars and 9.50 percent luxury cars.

Shares a month earlier were: Intermediates 35.26 percent, compacts 22.87 percent, subcompacts 19.98 percent, standards 12.19 and luxury 9.70 percent.

For imports, car inventories by nation of origin as a percent of the total looked this way as of March 1: Japan, 72.71 percent; West Germany, 17.79 percent; and others, 9.50 percent. A month before, it was Japan with 71.61 percent, West Germany with 17.00 percent and the others with 11.39 percent.

Days' supplies of imported trucks by maker stood this way on March 1 with the figure for Feb. 1 in parentheses: Chrysler 101 (126); Isuzu 93 (115); Nissan 86 (109); Mitsubishi 69 (78); Mazda 66 (70); Toyota 64 (67); Suzuki 22 (31).

New-model intro expenses cut Jaguar profits for '86

LONDON — Jaguar PLC reported revenues for the year ended Dec. 31, 1986, were up 11 percent from 1985 while after-tax profits declined because of new-car launch costs and other expenses.

The company's revenues totaled the equivalent of $1.2 billion, based on year-end exchange rates. After-tax profits amounted to $123 million, a 5 percent decline from 1985 profits. Pre-tax profits were $179 million, about the same as in 1985.

The company said 1986 results reflect $16 million in launch costs associated with the introduction of the new XJ6 sedan, increases in engineering expenditures and depreciation charges. The company also did not have any tax-loss carry-forwards remaining in 1986 so its tax bill increased 11 percent.

Vehicle production increased 7.63 percent to 41,437 cars from 38,500 in 1985. Sales to dealers and distributors rose 8.71 percent to 41,256 units in 1986 compared with 37,952 in 1985.

Sales of sedans rose 7 percent to 32,059 units. The new XJ6 sedan accounted for 2,610 sales in the final quarter of 1986. The XJ-S sports coupes recorded a 16 percent increase in sales to 9,008 units from 7,760 in 1985.

Jaguar again achieved record sales in the United States. U.S. sales were up 23.70 percent to 24,901 units compared with 20,130 during the prior year. Significant gains were also made in Canada, as sales increased 58 percent to 2,122.

Week's car production falls 3%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production of 167,942 was 3.26 percent below the previous week's 173,596 and 2.56 percent below the year-ago week's 172,348.

So far this year, 1,675,633 cars have been built, 7.53 percent below the 1,812,163 completed last year at this point.

Last week's scheduled output was split this way: General Motors, 52.91 percent; Ford Motor Co., 26.43 percent; Chrysler Motors, 10.54 percent; Honda of America Manufacturing Inc., 4.36 percent; New United Motor Manufacturing Inc., 2.38 percent; Nissan Motor Manufacturing Co., U.S.A., 1.74 percent; Volkswagen of America, 1.16 percent; and American Motors, 0.48 percent.

GM's Arlington, Texas, plant is idle this week (March 16) for inventory adjustment, affecting 2,000 workers. The plant is scheduled to resume production March 30.

The GM Detroit-Hamtramck plant resumed output today (March 16). The plant was down last week for inventory adjustment.

GM's Norwood, Ohio, plant remains idle this week due to a material shortage. The plant is expected to resume production March 23.

Ford slated Saturday (March 14) overtime at its Lorain, Ohio, plant. All Ford car plants are scheduled for daily overtime this week.

Chrysler's Newark, Del.; Sterling Heights, Mich.; and Detroit plants were slated for Saturday overtime.

The same plants are scheduled for daily overtime this week.

Saab reports 10th year of increasing profitability

LINKOPING, Sweden — Saab-Scania AB reported its 10th consecutive year of increased sales and earnings.

Sales increased 11 percent in 1986 to the equivalent of $4.9 billion, based on average exchange rates during 1986. Pre-tax income was up 15 percent at $463 million.

Saab-Scania sales outside Sweden increased 15 percent to $3.3 billion, accounting for 66 percent of the company's total sales.

Saab car sales rose 17 percent to $2.0 billion, despite considerably lower U.S. dollar exchange rates. Income on car sales amounted to $132 million.

Saab sales increased 16 percent to 126,988 units, of which 77 percent were delivered outside Sweden. It was Saab's highest-ever volume.

Car sales increased in all major markets, but the United States remained the single largest market for Saab cars in 1986 with a total of 47,414 sales.

Scania sales climbed 12 percent to $2.1 billion while pre-tax income rose 29 percent to $333 million. Scania delivered 28,421 trucks and buses, up 10 percent from 1985, its highest number in history. Sales outside Sweden accounted for 91 percent of total sales.

The Scania share of the western European truck market remained at 13 percent while market shares in many other markets, including Argentina and Australia, increased.

Booked orders for Scania increased 19 percent and include an order for more than 1,700 all-wheel-drive trucks for the Norwegian Armed Forces and for 600 cross-country trucks for the Indian Army. The order backlog at year-end was 45 percent higher than at year-end 1985.

Saab aircraft sales totaled $460 million in 1986. The Combitech group had lower sales of $182 million, and the Enertech group had sales of $177 million, a 15 percent decline.

For 1986, Saab-Scania's capital expenditures amounted to $337 million, 87 percent of which was invested in Sweden. Research and development costs reached $366 million, about 7 percent of sales. The company had 48,980 employees at year-end.

Saab-Scania also announced that the German auto publication Auto Motor Und Sport, has named the Saab 9000 Turbo the Best Imported Car of 1987 in the upper-medium price class. For the previous six years, the Saab 900 Turbo had won the award.

Trucks top car output in Canada

Last week's scheduled Canadian auto production totaled 17,820, 1.92 percent more than the previous week's 17,485 but 26.42 percent below the year-ago week's 24,217.

So far this year, 189,064 cars have been assembled, 16.45 percent less than the 226,280 completed last year at this point.

Truckmakers' estimated output of 17,956 units last week was slightly higher (0.92 percent) than the prior week's 17,793 but was 10.13 percent below the year-ago week's 19,980.

Year-to-date, 166,242 trucks have been built, 15.79 percent below the 197,425 assembled last year at this time.

Truck build holds steady

Domestic truckmakers' scheduled production of 79,784 units last week, 0.80 percent below the previous week's 80,424 but 4.90 percent above the year-ago week's 76,059.

Holding a lead over 1986, truckmakers' year-to-date total of 780,706 units is 4.52 percent more than the 746,974 completed last year at this time.

Saturday (March 14) overtime was scheduled at Ford Motor Co.'s Twin Cities, Minn.; and Norfolk, Va., plants.

All Ford truck plants are slated for daily overtime this week (March 16).

Chrysler Motors' Warren, Mich., plant is scheduled for daily overtime this week.

First Festivas arrive in U.S.

SAN FRANCISCO — The first shipment of 300 Korean-built Ford Festiva subcompact cars arrived in late February at the Port of Benecia.

The 1988 Festiva is a Mazda design and is built for Ford by South Korea's Kia Motors. It will go on sale in May at dealerships in California, Washington, Oregon, Alaska and Hawaii.

Following West Coast introduction, Festiva will go on sale in the Northeast in June, the Southeast in July and the rest of the United States by fall.

AMC promos to give away 1,000 units

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

American Motors will give away at least 1,000 vehicles in the next 12 months through various promotions, including 18 Jeep giveaway programs that will actually make money.

"Promoters are always contacting vehicle manufacturers about joint promotions and most companies offer vehicles for free," said Dan Gliniecki, national Jeep sales/merchandising promotion manager.

"However, because of the strength of the Jeep name, I can get money for the vehicles," Gliniecki said. "People will pay a premium to promote Jeep."

He said Jeep has 18 promotions scheduled, and will give away a minimum of 750 vehicles in the next year. AMC will give away another 250 Renault cars, he said.

While the programs were finalized and in place before the pending acquisition by Chrysler Corp., the starting dates of some are well after the sale is likely to be final.

Those promotions will include product tie-ins with large, well-known companies like Coca-Cola, Pennzoil and USA Today.

One promotion, with paper products maker Georgia-Pacific, will vie with a Chevrolet/Procter & Gamble program. The Chevrolet program will give away 750 cars and trucks as part of the launch for Corsica and Beretta cars and the GMT-400 truck. That program involves seven P&G brands, including two paper brands, Bounty towels and Charmin tissue.

The AMC program begins later this month and runs through Sept. 30. It will put game cards in 30 million packages of Coronet paper products. Participants win by collecting cards, or instantly by checking a "lucky number" against a list at the local AMC-Jeep-Renault dealership.

Prizes include three 1988 Renault GTA cars and three 1988 Jeep Cherokees, plus smaller items like cameras and key chains.

An executive of the agency handling the Georgia-Pacific promotion said the Coronet program was in place before the Chevrolet/Procter & Gamble plans surfaced.

Gliniecki said Georgia-Pacific is "participating" in the cost of the vehicles. It is a national program and there is no dealer participation cost.

"The whole purpose is to build showroom floor traffic," Gliniecki said. "If one percent of the people come in to check for the lucky number, that's another 300,000 people in our dealerships. A 10 percent return would be three million people."

There will be no special proce-

BIG DEALS: *NADA finds megadealer trend in 30-year volume, finance study*

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Statistics compiled by the National Automobile Dealers Association show that size continues to be a crucial profit factor in the evolution of the U.S.new-car dealership.

A recent NADA study analyzing 30-year trends shows why little dealers want to be big dealers, and why big dealers want to be mega-dealers: The big ones get richer, and the smaller ones don't.

"In 1956, dealerships selling more than 750 new units a year were a rarity," an NADA document said. "Today, they account for 20 percent of the total dealership population and for well over half of total dealership sales in the nation."

The average dealership sold 640 new cars and trucks last year, nearly four times as many as the average dealership sold in 1956. Some of that increase resulted from dealership attrition.

Automotive News dealership census figures show that at the end of 1956 there were 39,138 new-car dealerships (domestic and import combined) in the U.S. By the end of 1986, that number had dwindled to 25,156.

U.S. new-car dealerships that sold more than 750 new vehicles in 1986 averaged total sales of $30 million.

The impact of the trend toward megadealers is even clearer: Last year there were some 500 dealer principals whose sales exceeded $100 million.

Nineteen percent of all dealers had a financial interest in more than one dealership. In the category of dealerships with more than 750 new-vehicle sales, about one-third have a stake in other stores.

In 1986, total sales at the average dealership were a record $11,248,628, up 7.4 percent from $10,476,-167 in 1985, and 15 times greater than the 1956 per-dealership average of $738,272.

Although those figures are in nominal dollars and

Daihatsu strategy: big start, all duals

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LONG BEACH, Calif. — With an allocation of 11,498 cars for its first year and no guarantee of more the next, Daihatsu America is taking an unconventional U.S. introduction strategy.

It will spread its limited number of Charade three-doors over 150 to 200 initial dealers. These will be located in western and southern states ranging from the West Coast to Mississippi and Alabama, and start opening in October or November.

All start-up dealers will be duals, with no initial commitment to build exclusive facilities.

And, there will be no dealer ad associations to pool dealer and factory funds on a market-by-market basis.

The strategy contrasts with current conventional wisdom of relatively few dealers. Each sells a high volume in large, stand-alone showrooms and spends at least $200 per car through dealer advertising associations.

The Daihatsu strategy was outlined by Sota "John" Fukunaka, president and chief executive officer, and C.R. "Dick" Brown, vice president and chief operating officer, in an interview at Daihatsu's temporary offices near the Long Beach port.

Daihatsu faces several potential problems, including:

- It is the ninth and last Japanese car maker to attempt the U.S. market.

ACURA

U.S. output slated, may be exported

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

PHOENIX, Ariz. — Honda will assemble at least one model of its Acura lineup in North America within three years and may eventually export U.S.-built Legends to Japan.

"When we reach 100,000 units of an individual model of Acura, that will justify producing it here," Tetsuo Chino, American Honda president, said in an interview during the press introduction of the Acura Legend Coupe, Acura's new image car.

"I'm not sure whether Integra or Legend will be first assembled here," he said. Sales now are evenly split between the two series.

Legend Coupe: starts at $22,458

Chino suggested that Honda could be the first Japanese automaker to build cars in North America and export them to Japan.

A recommendation on expanding North American production is due at the end of 1987. The decision will take two months after that, Chino said.

In any case, he said, "Honda will not increase U.S. imports beyond

$87 billion in highway funds jeopardize hike in speed limit

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — President Reagan's promise to veto a highway funding bill passed last week by both the House and Senate greatly clouds the chances of increasing the speed limit on rural interstate highways.

Last week Congress approved a six-year, $87.5 billion highway and mass-transit package that would have given states the option of increasing to 65 mph the speed limit on an estimated 33,910 miles of rural interstate highways. The bill also provides funds to complete the 42,500-mile interstate system that was begun in 1956 under the Eisenhower administration.

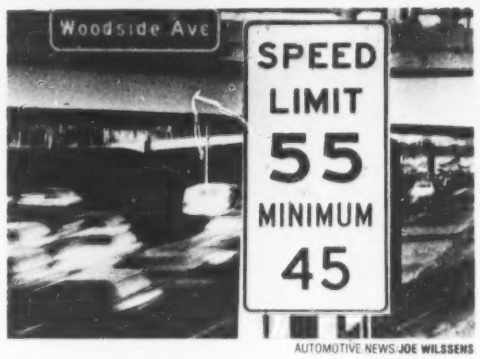
President Reagan has said he supports the right of states to set their own speed limits, but he is unhappy about overly-generous funding in the bill and the way money is distributed to the states.

The White House and the Congress are expected to reach a compromise on the legislation fairly quickly because most states are out of federal highway money and the spring construction season has begun in most parts of the country.

The compromise may not include an increase in speed limits, however, since the House approved of that provision by a narrow 217-206.

If states are given the right to set higher speed limits, the measure is certain to touch-off a highway safety debate featuring vehicle manufacturers, truckers, insurers, and public interest groups.

Vehicle manufacturers are expected to ask states without mandatory safety belt-use laws to enact them along with any increase in speed limits.



AUTOMOTIVE NEWS JOE WILSSENS

One reason the makers want mandatory-belt-use laws nationwide is that state laws would allow the Department of Transportation to withdraw its requirement that all vehicles be fitted with passive restraints by the 1990 model year.

The American Trucking Associations, the Insurance Institute for Highway Safety, the Center for Auto Safety and Public Citizen oppose higher speeds. They will ask state legislatures to reject a 65-mph maximum speed limit.

Those groups face grass-roots public hostility to the 55-mph speed limit in many states, however. It is almost certain that legislatures in many Western states will raise their speed limits as soon as possible.

ATA believes the current national speed limit of 55 mph is safer and results in more-economical truck operation. Some of the nation's larger truck fleets have also invested in equipment designed for a maximum speed of about 62 mph. Higher speed limits could put those carriers at a competitive disadvantage in winning freight contracts from owner-operators using older vehicles.

Chrysler-Renault proposal detailed

By Mary Connelly and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Chrysler Corp. has agreed to sell no cars that compete with the Renault Medallion through the 1990 model year, and none competitive with Premier through 1992, according to documents filed by Chrysler with the Securities and Exchange Commission.

The letter of intent sent by Chrysler to Renault includes a provision that commits Renault to providing four-wheel-drive systems and V-6 engines for the Medallion to Chrysler unless Chrysler does not achieve unspecified sales levels.

The price of the Medallion will be raised on July 1, and price hikes thereafter will be in line with prices of all cars in the Medallion size class.

If Chrysler does not sell at least 300,000 Premiers equipped with Renault componentry by the end of 1992, it will pay Renault a penalty of $1,300 per car for the shortfall.

Chrysler will continue to purchase V-6 engines, a four-speed automatic transmission, a manual transmissions and interior componentry for the Canadian-built Premier from Renault. In addition, Chrysler will be allowed to sell versions of the Premier without Renault componentry provided the company first offers to its dealers cars equipped with Renault parts.

If Chrysler surpasses the 300,000 mark, Renault will reduce its component prices to Chrysler by 21 percent. At the 750,000 mark or the end of 1992, whichever comes first, Chrysler will have a paid-up license to manufacture the Premier in North America, according to the document.

Meanwhile, the proposed Renault-Chrysler is also affecting Chrysler's own products. Chrysler Motors is expected to update the technology on its Omni/Horizon America subcompacts now that their lives have been extended by Chrysler's proposed purchase of American Motors.

Among the updates planned are fuel injection and passive restraints.

Following announcement of Chrysler's bid to acquire AMC,

Union set to strike GM Pontiac truck plant

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

UAW Local 594, representing about 9,000 workers at General Motors' Truck & Bus complex in Pontiac, has notified GM it will strike at noon Thursday (March 26).

The issues in the dispute have stirred union anger in plants nationwide. Some of those issues surfaced at two other Michigan locals in Livonia and Flint, last week.

Besides subcontracting and health and safety problems, many of Local 594's grievances — including line speedups and eliminating classifications — stem from the team method of production.

Local 594 members said GM has imposed the team method on Plant 6 of the Pontiac complex, ignoring the bargaining process.

Many locals have incorporated the team method and classification reductions into agreements designed to keep plants open.

Other local union leaders, including Donny G. Douglas, president of Local 594, and groups of rank and file workers, are now calling for an end to what they call this "whipsawing" by the corporation.

Inland Division's plant in Livonia, is viewed as the latest example of GM pressure for new work methods. Workers at the plant voted last Friday on management proposals to reduce classifications and implement the team concept. The results of the vote were not known at presstime.

Douglas said that GM also has been asking Local 594 to split seniority rights in its three divisions. That would block workers from transferring from one plant to another — an important issue at layoff time, when high-seniority workers can demand the jobs held by those with less seniority.

Last week, Fred Myers, president of Local 599, which represents the Buick City complex in Flint, said GM also is trying to separate a 2,500-member unit from that 15,000-member local.

About 1,000 of the almost 3,000 grievances in the Pontiac dispute were filed in Plant 6, which was recently modernized to produce the new C/K full-size pickup. The complex also produces medium and heavy-duty trucks and coaches and the S-truck.

A GM Truck & Bus spokeswoman said that the company is continuing to meet with local and international negotiators. "We hope a settlement can be reached without a strike," she said.

Douglas said that eliminating the traditional classification structure leaves workers vulnerable to arbitrary actions by management and deprives them of rights to move into jobs they prefer.

Local members said that GM's classification cuts have resulted in misclassifying workers transferring from a Flint Truck & Bus plant — from mechanic to assembler, for instance — and in requiring assemblers to perform maintenance work.

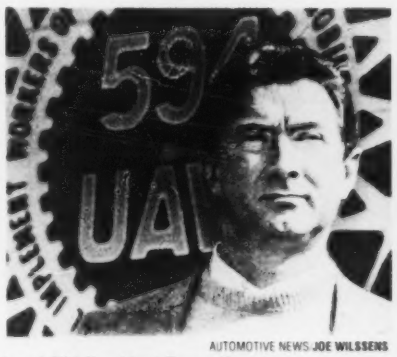
Some teams also have set line speeds unacceptable to other workers, Douglas said.

GM approached the Pontiac local months ago about opening its contract, which expires in the fall, but the local refused.

At that time, it was rumored GM would move medium-duty truck production out of Pontiac to Janesville, Wis., which had approved a new-style labor agreement. GM subsequently announced it would do so, at a possible cost of 2,000 Pontiac jobs.

GM previously had announced the sale of its coach and heavy-duty truck operations.

Michigan Commerce Director Doug Ross publicly criticized Douglas for not responding to GM's overtures and trying to keep medium-duty truck production at the plant. But Douglas said he maintained even before the Janesville local accepted a new contract that GM intended the medium-duty truck for Janesville.



AUTOMOTIVE NEWS JOE WILSSENS
Local 594 President Donny Douglas

Ralph Isenberg, a UAW trainer, said that Document 85 of the national agreement made possible such whipsawing. "It backfired on us. The document's intent was to give locals flexibility" in bargaining work rules and wages with GM, Isenberg said.

Harley Shaiken, professor of work and technology at the University of California in San Diego, said that several GM locals approved new-style agreements under the "economic pressure" of believing their plants would otherwise be closed.

Shaiken said he expects a backlash as other locals — such as 594 — negotiate their contracts this fall.

Price of U.S.-built cars seen averaging $13,800 in '95

ANN ARBOR, Mich. — A survey of automotive marketing executives and consultants forecasts that the average price of U.S.-built automobiles will climb to $13,800 by 1995.

The average price of a U.S.-built car in 1985 was $11,600. Preliminary estimates from the U.S. Department of Congress indicate the average price last year was $12,-621.

The poll of more than 250 individuals was directed by University of Michigan engineering professor David E. Cole.

By 1995, the average foreign model will be about $900 more expensive than U.S. brands, according to the survey. Last year, imports averaged an estimated $540 more than domestics.

The trend toward smaller cars with more luxury options will continue through 1995, according to the survey participants. Downsizing will be far more modest than predicted in earlier forecasts.

Average ownership of new models will extend from four years to five, and imports will attract a wider share of the subcompact and compact market.

The survey is the fourth in a series of 10-year forecasts on the auto industry that began in 1979 at the University of Michigan Transportation Research Institute.

"The Delphi IV Forecast and Analysis of the U.S. Automotive Industry through 1995" examines marketing, technology and materials in the auto industry. It is being released in three volumes. The current volume examines the future market. The technology and materials segments will be issued within two months.

The marketing report said that to remain competitive, U.S. automakers should resist the temptation to extend their production capacity during the good years so they will have a low fixed-cost burden during weak sales years.

Other predictions included:

- The retail price of unleaded gasoline and diesel fuel will rise to an average of $1.60 in 2000, assuming no serious international energy problems.
- Reliability was seen as the No. 1 consumer concern.
- Car sales, which approached 11.5 million last year, will be 11.4 million in 1990 and 11.8 million in 1995. Sales of imported cars, which totaled 3.2 million units and accounted for 28 percent of industry sales last year, will total 3.1 million units, or 27 percent of industry sales, in 1990 and 3.4 million units, or 29 percent, in 1995.
- About 12 percent of total car sales are forecast to be supplied from foreign companies operating in the United States in 1990. Less than 4 percent were produced by these makers last year. The share could rise to about 14 percent in 1995.

Correction

A story in the March 16 issue of Automotive News saying that the American Motors board would accept the Chrysler Corp. acquisition within 60 days was incorrectly attributed to AMC Director Roy D. Chapin Jr. It should have been attributed to another AMC director, who spoke on the condition of anonymity.

Lease firms increase despite major buyouts

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Despite numerous acquisitions and mergers, the number of truck leasing companies is rising.

That's the report from John Simourian, president of Lily Truck Leasing in Boston and outgoing president of the Truck Rental and Leasing Association.

Last year, Ryder Systems, the industry's largest company, bought Saunders, the third-largest. And Hertz-Penske, the second-largest lessor, bought Leaseway, the fourth-largest.

Still, in 1986 several dozen other companies emerged, some brand new, with services fine-tuned to particular areas of expertise and geographical locations, Simourian said at TRALA's meeting here.

TRALA listed 27 new companies on its membership roll last year. It now has 183 members.

Michael Galardi, vice president of Temple, Barker & Sloane in Boston, who surveyed TRALA members' progress and attitudes, reported that:

- Insurance costs continue to be the top concern, although the increases have slowed dramatically to less than 20 percent in 1987.
- Most members believe the length of lease terms will continue to increase.
- Leasing prices are expected to rise and generate better returns for leasing companies in the next 18 to 24 months. That is expected to occur because of consolidations and elimination of excess capacity in full-service truck leasing.
- Members expect the acquisition frenzy to continue.
- Last year turned out to be better than anticipated.

"This year, 22 percent (of respondents) reported that 1986 turned out 'much better' than expected," Simourian said. An equal number said it was somewhat better than expected.

- Fleet sizes grew for both small and large leasing companies, though they increased at a faster rate among the larger firms.

Roughly one-third of TRALA's leasing company members, with revenues (excluding fuel sales) of more than $5 million, are classified as large. Those with less than $5 million are classified as small.

Generally, the average company's fleet grew about 7.5 percent in 1986. Among small companies, 22 percent reported their fleet size increased by 15 percent or more. Among large companies, 42 percent reported an increase of 15 percent or more in fleet size.

- The overall financial condition of member companies continued to improve, but the improvement was most significant for the largest companies.

Only 16 percent of small companies reported their financial condition improved significantly, while 33 percent of the large companies reported a significant improvement.

- Quality of service was rated more critical than price by customers in selecting leasing firms.

Rockwell purchases Iveco share; now owns all of Italian axle firm

TROY, Mich. — Rockwell International Corp. has acquired the remaining 40 percent equity in Rockwell CVC in Cameri, Italy, from Iveco Fiat, S.p.A., a subsidiary of Iveco B.V., the Fiat Group's truck operation.

Arthur P. Ronan, president of Rockwell's Automotive Operations, said the purchase of Iveco's minority interest would not change the management, engineering, manufacturing or marketing structure of the company.

Ronan said the purchase underscores "Rockwell's commitment to being an independent supplier of technologically advanced drive axles to the European truck industry."

Iveco's partnership, he added, was highly valuable, particularly in the start-up and launch of Rockwell's single-reduction drive axles in Europe.

Giorgio Garuzzo, managing director of Iveco, said Rockwell CVC will continue to be his company's major supplier of rear axles. It signed a new supply agreement to ensure the continuity of its purchases of axles it has been buying from Rockwell CVC.

Rockwell CVC, formed in 1981 as a joint venture between Rockwell and Iveco, produces a broad range of Rockwell-designed single-reduction hypoid drive axles for the European commercial-vehicle market.

Ryder Truck Rental to emphasize safety

MIAMI — Ryder Truck Rental has made safety its keynote concern this year.

Donald W. Estes, Ryder president, outlined some of the company's plans at its national District Safety Managers' Conference here.

RTR plans to develop individual safety programs geared to the specific needs of each RTR location. The company also is forming an RTR Safety Task Force to oversee its safety program.

Mack to sell notes linked to its assets

CRAIN NEWS SERVICE

ALLENTOWN, Pa. — Mack Trucks Inc. plans to launch a public offering of securities backed by heavy-duty truck receivables later this month.

It will be the first such offering by Mack and a first for the truck industry.

Mack Trucks Receivables Corp. (TRUCS) filed a shelf registration with the Securities and Exchange Commission in late February to issue $450 million of asset-backed notes. The company was formed for the offering and is a special-purpose subsidiary of Mack Financial Corp. which, in turn, is a subsidiary of Mack Trucks.

A company spokesman said Mack's first TRUCS offering likely will be about $250 million and is expected to be on the market in late March. If the market responds well, Mack Trucks plans at least two more offerings of $100 million each.

The company said it making the offering as a way to lower its debt. Mack Truck Receivables will use the proceeds to buy the heavy-duty truck loans from Mack Financial, which will use the money to lower its debt. The company now carries about $360 million in intermediate and long-term debt on its books with an average interest rate of 10.2 percent.

General Motors and some banks, including Marine Midland Bank, have made similar public as well as private placement offerings that use car loans as receivables. Banks also have used credit-card receivables.

GM and others expect a secondary market for automobile receivables to develop, much like the secondary mortgage market. Selling asset-backed receivables — such as car loans — will provide another source of funds to tap and ultimately should lower the cost of car loans to consumers, the company said.

Shearson Lehman Brothers Inc., New York, will handle the Mack offering.

GM workers sue UAW and local

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

A group of General Motors workers who are faced with the loss of their jobs have filed a $2.5 billion suit against UAW Local 15 and the international union.

The workers claim they were not allowed to vote on a contract GM offered the local in 1985 that could have kept two Detroit plants open. The offer included a $200 million investment by GM in the Fleetwood plant, which would have merged with the Clark Avenue plant. Both are slated to close in December.

Harold Dunne, attorney for the workers, said the class-action suit was filed in U.S. District Court in Detroit on behalf of 3,000 employees at the Fleetwood plant. Local 15 represents that plant.

The suit charges breach of duty of fair representation and denial of rights under federal law. The amount of the suit represents lost wages of employees and punitive damages.

The new contract could have resulted in the Fleetwood and Clark Avenue plants remaining open for many years, the workers said.

Automotive News reported on June 10, 1985, that former UAW Regional Director Frank Runnels said talks between the union and Fleetwood management on a concessions agreement broke off because management failed to offer the union guarantees that a new facility would be built on the Fleetwood site.

A spokesman for the international union said it had no comment at this time.

Dan Martin, a Local 15 committeeman, and Leland Stein, a former union official, are leading the group that filed the suit.

According to Joseph Wilson, president of UAW Local 15, the suit stems from the lack of legislation imposing limits and "fair standards" on corporations that want to close plants.

Wilson said the suit is also the result of the company whipsawing the local since 1980 and the international union failing to stop the practice.

Wilson said that an example of whipsawing is GM approaching locals whose contracts have not yet expired and asking for new agreements. He said that GM approached his local in 1985, though its contract runs until this fall.

"They go to one local union and say, 'Let's make a new agreement, and we might do this and that.' Then they go to another local with the same talk. The final result is the company puts work wherever they want," Wilson said.

CONFI-
DENTIAL

What it means to you, it means to us.

Confidentiality is not a matter for debate. When you're buying or selling a dealership it is an integral part of the process.

First Atlantic Automotive Consultants is the first and only organization of its kind created to provide services related to selling and purchasing of automotive dealerships. We're a dedicated team of automotive professionals who know your business and we'll make sure you get the most for it.

First Atlantic Automotive Consultants is a team of former auto manufacturer and dealership management personnel brought together for a common objective. That objective is to handle the needs of automobile dealerships, large or small, to cut through the red tape and bring only qualified purchasers and buyers to the table.

Whether you're looking to buy or sell, First Atlantic, in strict confidence, will evaluate your business, get you through the required documentation, furnish buy-sell agreements to your counsel and assist through closing.

So, don't take chances with your future. Call us First. (201) 857-5900.

Car sales in Canada decline 16%; trucks up 3%

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Domestic new-car sales in Canada in February were 16.76 percent below the total for the year-ago month.

Canadian dealers delivered 48,153 North American-built cars in February compared to 57,851 in February 1986.

Truck sales totaled 26,822 in February, up 3.06 percent from 26,026 a year earlier.

General Motors, Ford Motor Co., Chrysler Motors and American Motors continued to offer low-interest rates and/or cash rebates on small cars and light trucks to lure Canadian customers into dealer showrooms.

Sales for the first two months of 1987 were off 18.85 percent from the same period in 1986. The two-month total for this year was 85,869, compared to 105,818 in 1986.

Five domestic carmakers showed sales drops on a year-to-year basis. Honda, Canada's sixth automaker, began producing four-door Accord models in its Alliston, Ontario, plant in November 1986. Honda sold 96 Canadian-built cars last month.

MARKET SHARES
February 1987

Cars	
General Motors	51.70%
Ford Motor Co.	28.52%
Chrysler Motors	18.60%
American Motors	.73%
Volvo	.25%
Honda	.20%
Trucks	
General Motors	43.08%
Ford Motor Co.	36.42%
Chrysler Motors	15.32%
Jeep	5.18%

GM showed the biggest drop in February. It sold 24,896 North American cars, down 20.04 percent from 31,139 a year earlier.

A GM spokesman said the corporation offered $750 (Canadian) on its J, A, G and P models and full-sized pickups. The J-A-G car types are the Chevrolet Cavalier, Celebrity and Monte Carlo. The P-car is the Pontiac Fiero. No interest-rate incentives were offered by GM in Canada.

The Pontiac 6000 and the Chevrolet Celebrity were GM's best-selling models in Canada last month.

Ford car sales were off 5.86 percent, slipping to 13,734 from 14,589 in February 1986. Ford enticed Canadian buyers with 3.9 annual-percentage-rate financing on Tempo, Topaz, Mustang and Ranger models. Taurus and Sable were Ford's best-selling models last month with a combined total of 2,464 units.

Chrysler sold 8,956 cars last month compared to 11,080 a year earlier. A Chrysler spokesman said the automaker offered 3.9 percent financing and $600 to $1,500 in cash rebates on a wide range of models. However, sales trailed the year-ago total.

Sales of American Motors and Renault North American-built cars fell to 353 in February, down 59.47 percent from 871 last year. The company offered zero percent financing on all its vehicles until mid-February.

Volvo domestic sales in Canada also fell sharply in February, dropping 31.39 percent from the year-ago month. Volvo sold 118 cars last month compared to 172 a year earlier.

A Volvo of Canada spokeswoman said the Swedish automaker was beset by transportation problems caused by heavy snow. Snow slowed the distribution of cars from depots to dealers.

Truck sales for domestic makers were brighter. Ford posted a 4.80 percent increase in February from the year-ago month. Ford dealers sold 9,769 trucks last month compared to 9,322 a year ago. AMC's Jeep sales were up 57.37 percent in February, going from 882 the year-ago month to 1,388.

GM truck sales of 11,554 were almost the same as 11,566 last year.

Chrysler, with 4,111, was down 3.40 percent from 4,256.

Sales of captive imports in Canada last month were as follows:

In addition to North American-car sales, GM sold 113 Isuzu-built Sunburst models (Spectrum) and 770 Suzuki-built Firefly models (Sprint). Ford sold 616 Mercury Tracer models and 34 Merkur XR4Ti models. Chrysler sold 624 Mitsubishi cars and 60 Peugeot cars. AMC sold 166 imported Renault vehicles, and Volvo sold 359 Swedish-built Volvo cars.

Honda sold 4,591 Japanese-built models in addition to the 96 produced in Canada.

Import-car sales double in Taiwan

TAIPEI, Taiwan — More than 30,000 imported cars were sold in Taiwan last year, up from about 13,000 in 1985. Imports now account for 20 percent of the local car market.

According to the Free China Newsletter, local auto dealers said the rapid growth in imported-car sales surprised Taiwanese automakers, who experienced a sales decline last year.

In 1985, dealers said, 13,000 foreign-made cars were sold in Taiwan, accounting for 10 percent of the domestic market. They predicted import sales will eventually account for 40 percent of the nation's new-car market.

Dealers attributed the growth of imported-car sales to a 5 percent reduction in import tariffs and lower retail prices.

Total sales of domestic and foreign cars in Taiwan were approximately 140,000 in 1986, the newsletter said.

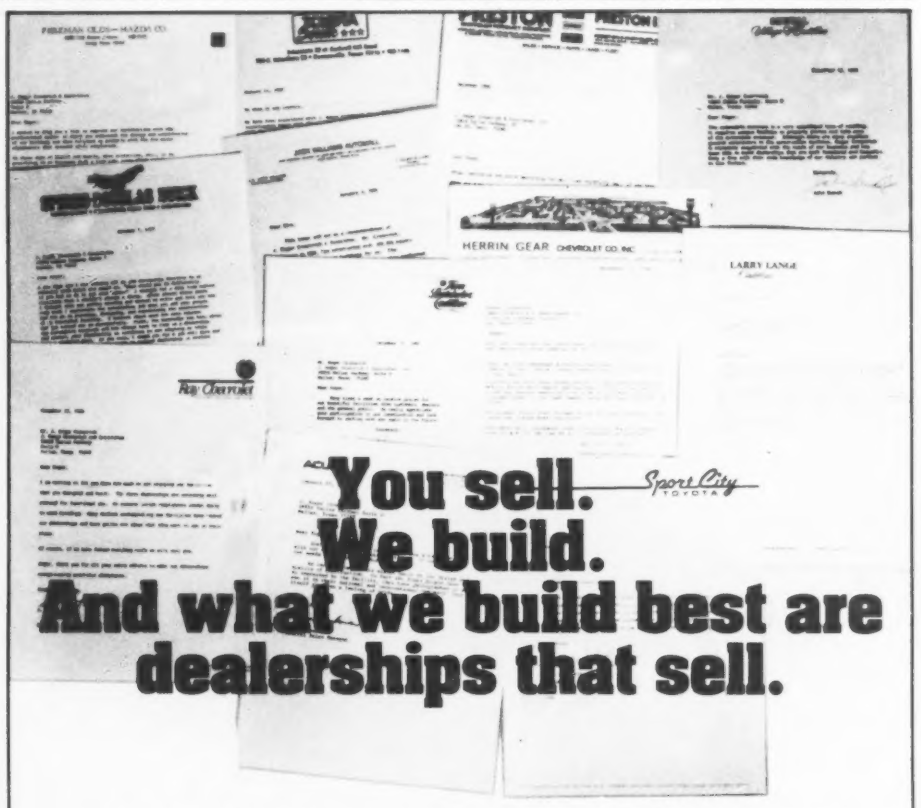
Big increase seen in Brazil's exports

SAO PAULO, Brazil — Brazil's auto exports are expected to total 250,000 to 300,000 units this year, compared with 182,100 in 1986. The increase will be due primarily to exports of the Volkswagen Fox to the United States and shipments of the Fiat Duna to Italy.

The United States and Italy will become Brazil's best automotive customers this year, according to Andre Beer, president of ANFAVEA, the country's auto industry association.

The Brazilian industry produced 1,057,000 vehicles in 1986. That was short of its all-time record of 1,165,000 in 1980.

For 1987, Beer forecasts output of 1,160,000 to 1,200,000 vehicles. Exports of $2.1 billion to $2.3 billion are expected to top the record $1.99 billion worth of vehicles and parts exported in 1981.



You sell. Sport City TOYOTA
We build.
And what we build best are dealerships that sell.

And we've designed, engineered, built, and equipped well over a hundred dealerships that do just that—to the tune of almost 100,000 cars and trucks each year
That's not by chance; it comes from knowing this business from showrooms to lifts—and everywhere in between; from seeing where costs can hide—and profits can be had; from treating our customers just as you do yours—by performing without fail.
If you want the only true turn-key pro, then you need Crownrich—the single source for building a dealership. Why not see for yourself?
Carl Sewell did; Ray Huffines did; Carl Herrin did; Jerry Freeman did; Ken Batchelor did; Monte White did; Larry Lange.....

Germany braces itself for metalworker strike

By Richard Johnson

With a German metalworkers' contract set to expire April 1, auto executives in Frankfurt are remembering the disruption caused by the union's seven-week strike in 1984.

But despite the threat of another walkout this year, West German industry leaders say they are more concerned about preserving the country's long-term stature as a major producer and exporter.

The 1984 strike not only ground German automakers to a halt, but also shut down much of the local supplier base and had a rippling effect across the world car industry.

With the existing pact about to expire and the two sides still far apart, prospects for another lengthy work stoppage are high. A strike this year would put a damper on a West German market that reached a record sales level last year and would put additional bottom-line pressure on a national industry hit hard by the deutschemark's steep rise against the dollar.

But West German auto executives claim their country's future as one of the world's major vehicle producers lies in the balance as this year's negotiations proceed.

I.G. Metall, the 2.6-million-member metalworkers' union, is seeking a 5-percent wage increase and a simultaneous cut in the workweek from an average 38.5 hours to 35 hours.

But according to a 19-nation survey by the German Association of Employers, German industrial employees already put in the fewest hours in the world. In 1986 they worked an average of 1,708 hours — 448 fewer than the Japanese.

In more than two months of negotiations, the two sides have been unable to come together on the critical issue of the length of the workweek. Gesamtmetall, the employers' association, has offered a small wage increase and some scheduling flexibility by permitting more time off Monday through Friday, if the time is made up on Saturday.

> "The 35-hour workweek is a problem of productivity. It wouldn't work. If they are tough in their demand, there will be a strike. The industry knows that we cannot accept this."
>
> **— Daniel Goeudevert, Chairman, Ford of Germany**

Gesamtmetall has been the employers' public voice, with car company officials generally staying mum on the subject. But two West German chief executives recently offered strong opinions in separate interviews with *Automotive News*.

Both Audi Chairman Dr. Wolfgang Habbel and Ford of Germany Chairman Daniel Goeudevert noted that the country's competitive stance is threatened by a reduction in work hours and seemed resigned to the high probability of a strike.

Habbel conceded the likelihood of a walkout, but promised that employers won't back down. He said the double-barrelled approach of higher wages and fewer hours has been the main stumbling block.

"If we would do both it comes to something like a 10 or more percent total increase in labor costs," said Habbel. "That's something the industry can't live with."

Goeudevert said a combination of a 5-percent wage increase and 35-hour workweek "would be absolutely disastrous."

"The 35-hour workweek is a problem of productivity," he said. "It wouldn't work. If they are tough in their demand, there will be a strike. The industry knows that we cannot accept this.

"There are a lot of good things about manufacturing cars in Germany and also a lot of bad things," he added. "We can't control exchange rates, but we can do a better job on labor costs. Asking for less working hours and more salary is driving us into a more difficult situation in manufacturing that kind of (high-quality) product in Germany and being competitive."

Because of the currency swing in the past 18 months, the Germans are increasingly nervous about competitiveness. Another spurt in German labor costs would severely damage the national industry, say many observers.

With growing penetration of export sales here in small-car segments and lower cost sources developing in places like Spain and Eastern Europe, a restructuring of the local car industry could be at hand. The general expectation is for more sourcing from outside Germany, both for components and built-up small cars.

The issue is one of West German quality, both at the manufacturer and supplier levels, against growing labor costs. None of the German producers predict a significant shift away from local suppliers in the short term, but a gradual movement among the high-volume producers seems likely.

Though Ford of Germany's West German content is now about 80 percent, Goeudevert said the long-term trend will be downward.

"I don't believe that in the next 10 years we'll be so far down that we'll be below 50 percent," he said. "By sourcing components outside Germany you run the risk of hurting quality reputation. The German suppliers also know they are high-priced... and that they are not alone in the world."

Hans-Erdmann Schonbeck, president of Verband der Automobilindustrie (VDA), the German industry association, said recently that West Germany's reputation for high quality "glosses over the disadvantage of the high cost level which the Federal Republic as a production locality has in international competition.

"Dampening of rising costs is of utmost priority in the interest of competitiveness and thus of job security," Schonbeck said. "A further reduction in the number of hours worked would additionally restrict the scope for wage increases."

But I.G. Metall, Europe's biggest trade union, is adamant on the issue of work hours. The union's seven-week strike in the summer of 1984 was designed to cut the workweek from 40 hours to 35 hours and succeeded in winning a 38.5-hour week.

Franz Steinkuhler, the union's new leader and the organizer of the 1984 strike, says shorter hours is the best way to increase employment in West Germany, where some 2 million persons are out of work.

A debate central to the negotiations has been the number of jobs that would be created through shorter hours. The union says 100,000 jobs were generated by the 1½-hour reduction in 1984, while the employers say the figure is more like 20,000.

Thus far, the union seems to have held the rank and file together on the workweek issue. I.G. Metall's rallying cry has been that the corporate treasuries are overflowing with the proceeds of several years of steadily growing profits. ■

Sales fall 4 percent in Western Europe in January

By Richard Johnson

Fiat Auto surged into the Western European sales lead in January as overall sales for the area declined 4 percent because of a sharp sales drop in West Germany.

The January total for Western Europe was 921,900, compared with 960,000 in January 1986.

Japanese sales and market share plummeted in January, reflecting a steep reduction in exports to Europe during the months of November and December. The Japanese reduced shipments because of pressure by European governments. But shipments from Japan were up 38 percent in January as manufacturers sought to replenish stocks.

The January sales estimates are derived from industry estimates compiled by *Automotive News*.

Fiat, with 148,000 sales, captured the top sales position from Volkswagen Group, the leader throughout 1986. Fiat held the lead even without including its new acquisition, Alfa Romeo, in the overall numbers.

With Alfa's 1.5-percent share, Fiat held a commanding 16.1 percent of the European market in January — nearly 3 percentage points better than the VW-Audi-Seat combine.

EUROPEAN SALES

Manufacturer	January 1987	1987 share*	January 1986	Pct. Change 1987 vs. 1986

****—Opel, Vauxhall, Isuzu, GM-U.S./Canada

Volkswagen was hurt by the severe January sales downturn in West Germany, Europe's largest new-car market. Sales fell 27 percent after a brisk December, prompted by a Jan. 1 reduction in the tax write-off for cars equipped with catalytic converters. Sales totaled 145,900 in January, compared with 200,900 during the same month last year.

Among Europe's other major markets, Italy was up 3.0 percent, the United Kingdom fell 0.3 percent and France was down 2.8 percent.

Sales in Spain, Europe's fifth-largest and fastest-growing market, soared 86 percent in January. The country's auto industry is still riding a sales crest that got rolling last summer.

The West German decline was the main reason VW Group, Ford and General Motors each lost European sales and market share last month.

VW Group was down 5.6 percent overall to 123,000. The VW unit fell 13.3 percent, while Audi was up 6.5 percent and Seat sales rose 33 percent. In West Germany, group sales were off nearly 20 percent, though market share was up nearly 3 percentage points to 28.5.

Ford, in a virtual tie with Peugeot SA for third place in Europe, declined 9.8 percent because of a 53-percent January drop in West Germany.

General Motors, the No. 2 seller in Germany, was down 31.1 percent in that market and off 8.2 percent in all of Western Europe.

The slack West German market also explains why Mercedes-Benz slipped behind Austin Rover in Europe during January and why BMW dropped below Volvo. But despite the 27 percent decline, most industry analysts still expect the West German market to approach, though not match, the record 2.8 million sales chalked up last year.

Fiat benefited from a steady Italian market to ring up sales of 148,000, less than 1 percent better than January 1986. The figures include sales of 15,100 Alfa Romeo models. Alfa officially became part of Fiat on Jan. 1.

Fiat's 16.1-percent combined market share was followed by VW Group with 13.3 percent, Ford and Peugeot SA at 11.5 percent, General Motors at 11.3 percent, and Renault at 10.3 percent. Only Fiat and Renault had sales gains over the previous January. The French carmaker was up 6 percent.

In the second tier, Austin Rover held 4.2 percent of the European market; Mercedes, 3.5 percent; Volvo, 2.6 percent; BMW, 2.5 percent.

Each of the four leading Japanese makers in Europe — Toyota, Nissan, Mazda and Mitsubishi — fell sharply in January. Combined Japanese sales were 86,400, down 13.3 percent. The Japanese share was 9.4 percent, compared with 10.4 percent in January 1986 and 11.7 percent for all of 1986. ■

South African automakers post February sales gain

By Jeremy Sinek

February vehicle sales have left South Africa's automakers looking forward to 1987 with quiet, if guarded, optimism.

Total sales of 22,976 vehicles was a 10.7-percent gain on January and up 8.2 percent on February '86. This was made up of 15,162 passenger cars (up 13.3 percent) plus 1,131 medium and heavy trucks and buses, a rise of 41.4 percent off an admittedly very low base. All sectors except medium trucks were also up.

The improvement is being partly credited to the fact that used-car prices — fueled by a shortage of models traded in against new cars — have now risen so sharply that they are not much cheaper than new ones.

Toyota was the only automaker not to post increased sales. Its 3.7-percent drop to 3,712 units may have reflected stock shortages after the Christmas shutdown, but did not prevent its customary market leadership of 24.5 percent for the month. Toyota also posted a 29.2-percent gain in light commercials, where it took a 37.7-percent share of the market.

VW matched Samcor's 3,106 sales to score a 20.5-percent portion of the market. Samcor's tally comprised 1,719 Fords and 1,387 Mazdas, both of which are discounting heavily certain models.

A distant fourth was Mercedes/Honda with 1,525 sales (783 Hondas), while Delta Motor Corp. — formerly GM South African — sold 1,373 units, a 39.5-percent gain; 1,157 of those were Kadetts and Monzas, which pushed the GM subcompact into third place behind the VW Golf/Jetta (2,595) and Toyota Corolla (2,556).

BMW remained steady with 1,255 sales, while Nissan was again bottom of the passenger-car league with 1,082 sales.

Nissan's hopes for an improvement are pinned on launch of the new Skyline in June and a new subcompact later in the year. ■

Car, truck scrappage set records

DETROIT — R.L. Polk & Co. reported that automobile scrappage and truck scrappage each reached an all-time high in the United States in the year ended June 30, 1986.

Car scrappage totaled 8.4 million units, and truck scrappage totaled 2.3 million, Polk said.

The scrappage figures were contained in Polk's recently issued 62nd annual motor-vehicle registrations report, which covered the period from July 1, 1985, to June 30, 1986.

Polk said that although new-car registrations in the United States hit a 13-year high of 11.1 million for the period, the passenger-car population increased only 2.3 percent, the lowest rate of growth in three years. The total was 117.3 million, compared to 114.7 million a year earlier.

Despite increases in new-car registrations during the last five years and increased scrappage during the last four years, the median age of the nation's car population continues an upward trend, Polk said.

Polk's census showed the median age at 7.0 years, up from 6.9 years a year earlier and 6.5 years in 1983.

The trends are somewhat surprising, according to R.D. Borthwick, vice president and manager of aftermarket services for Polk's Motor Statistical Division.

"The logical assumption would be that we would see a decline in the median age of the nation's cars, based on the number of new cars sold through buyer incentives and the record number of automobiles scrapped," said Borthwick.

"Surprisingly, what we're seeing is an increase. Those that remain are getting older.

"The lower interest rates and controlled inflation have had a positive effect on overall new-car sales, but there remains a segment of the public which still can't afford a new unit. They seem to be hanging on to their cars, causing the increase in the median age of our total car population," Borthwick said.

Despite the record truck scrappage, the number of trucks in operation increased 5.8 percent, the highest increase since 1978, Polk said. The census showed 44.8 million trucks in use, up from 42.4 million a year earlier.

The census also showed that the median age for trucks continued to edge upward, reaching 7.7 years, up from 7.6 a year earlier.

Increases in new-unit registrations have more than offset the increase in truck scrappage, Borthwick said.

"The new truck business has been excellent," he said. "New-unit registrations for the year reached 4.7 million, and one-third of the vehicle-owning households in the U.S. now own at least one truck."

Borthwick said the increase in truck popularity comes partly from the public's acceptance of mini-trucks such as vans, pickups and sport/utility vehicles.

"The trends we're seeing probably can be traced to the downsizing of passenger cars begun in the late '70s," he said. "Many traditional car buyers appear to be switching to trucks, presumably for the cargo space and versatility for outdoor recreation."

The Polk census is based on more than 225 million state records processed by the firm and provides information for vehicle-related studies and planning. It is made available to vehicle manufacturers; automotive aftermarket suppliers; the tire, oil, glass and insurance industries; and government agencies and offices.

The company has compiled the census annually since 1924.

DRIVING: *Jackie Stewart puts advice on videotape for beginners, commuters and enthusiasts*

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Jackie Stewart, three-time world auto racing champion, is putting driving tips on videotape.

A 30-minute video, available in both VHS and Betamax format, goes on sale this month at a list price of $59.95. It is produced and marketed by Carl Lorimar Home Video, a partnership between Stewart, Carl Lorimar and Lorimar Telepictures.

The video is aimed at a broad audience ranging from auto enthusiasts to commuters to new drivers, Stewart said. In addition to individual sales, Stewart expects the tape to sell well to operators of video rental shops.

The tape covers basic driving skills, acceleration, braking, cornering and Stewart's trademark message — smoothness and rhythm in everyday driving.

"If I were a parent, I would want my young driver to see something like this simply because it's a safe motoring message that's coming from a driving authority more acceptable to young people than a parent or a police chief," Stewart said.

The tape is not being promoted by Ford Motor Co. or Ford dealers, despite Stewart's long association with Ford. It was independently financed and Ford is not mentioned by name in the tape, although Ford vehicles are used.

Stewart interweaves some race-car footage into the tape, but uses it to underscore his point about safety equipment being important regardless of the type of driving.

"We use a bit of play-acting as well, with a mother and baby stepping out into the street and a driver starting his morning commute and fumbling with a cassette tape while driving into the sun," Stewart said. "We used a stunt woman and a dummy baby, but the shot of them coming up onto the hood is an effective illustration, I think."

Stewart sees the tape as a first step. He would like to follow it with other videos for more-advanced drivers on winter or night driving, cornering and gear-shifting techniques and perhaps do another series of tapes in Europe.

SOURCE: NADA

DEALERS

FROM PAGE 1

are not adjusted for inflation, the trend is clear. During the 30-year period, general price levels increased 308 percent. Adjusting for inflation still leaves a real fourfold increase.

The total dealership gross margin was 14.2 percent in 1986, compared with 15.7 percent in 1956. However, total dealership expenses as a percent of sales were 12.0 percent last year, compared with 14.9 percent 30 years ago, suggesting that cost-reduction programs work.

Average dealership net profit before tax was $242,970, or 2.2 percent of sales, in 1986 compared with $230,476, also 2.2 percent of sales, in 1985. In 1956, the average was $5,906, just 0.8 percent of sales.

However, the impact of size was clear in this area of the NADA study, which reported that the average dealership selling fewer than 400 new vehicles a year "has not netted over 1.7 percent on sales since 1978."

Hence, the overall average sales return has been driven upward by ever-larger operations while the average smaller dealership has struggled.

In the last 30 years, average dealership net worth has increased from $131,923 to $645,360.

As a result, average dealership return on equity — that is, net profit as a percent of net worth — increased from 5.5 percent in 1956 to 37.7 percent last year.

Size also was a factor in return on equity. Last year, return on equity for dealerships selling more than 750 new units was about 43 percent, while for dealerships selling fewer than 400 units it was about 18 percent.

That disparity has grown. Ten years earlier, in 1976 when dealerships selling more than 750 vehicles became a measurable and statistically significant class, return on equity was 30 percent for that group, while for the average dealership selling fewer than 400 new units, 1976 return on equity was 20 percent.

The 30-year trend plotted by the study also showed that for the average dealership, annual advertising expenses have increased from $5,900 to $133,900.

While the average number of employees has doubled, from 17 to 34, the annual payroll has grown 11-fold, from $70,000 to $770,000.

There also was a shift in the relative importance of dealership departments.

In 1956, new-vehicle sales accounted for 60 percent of total sales, compared with 67.3 percent last year.

Used-vehicle sales were 22 percent of total sales in 1956 compared with 19.9 percent in 1986.

And 30 years ago, parts and service accounted for 18 percent of total sales, compared with just 12.8 percent last year.

NADA says extended warranties won't kill service-contract sales

NADA said that publicity generated by the warranty wars may cause consumers to consider how long they plan to keep new cars.

WASHINGTON — The Big Three battle over extended warranties will eventually affect dealers' sales of their own service contracts. But the initial effect will be minimal, according to the National Automobile Dealers Association.

The NADA analysis cited Chrysler Corp.'s experience with its 5-year/50,000-mile powertrain warranty — in effect since 1982 and for four years a longer warranty than that offered by other U.S. manufacturers. During that time, Chrysler dealers' service contract sales stayed strong and profitable, NADA reported.

NADA figures show that in 1986, Chrysler dealers generated an average gross profit per extended service contract that was twice as high as the average Ford Motor Co. dealer and 11 percent higher than the average General Motors dealer. Yet Chrysler's average contract was priced competitively with Ford and GM.

Moreover, the Chrysler extended warranty did not reduce the number of extended service contracts Chrysler dealers sold. In 1986, NADA's average dealer sold extended service contracts on some 36 percent of all new vehicles. The average was the same for Chrysler, Ford and GM dealers.

NADA said that publicity generated by the warranty wars may cause consumers to consider how long they plan to keep new cars. Dealers may experience a decline in the sales of more expensive service contracts, NADA warned.

VW's Brazilian losses deepen

Country's other makers expected to announce similar results

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Volkswagen do Brasil registered a loss of $146 million in 1986 compared with a loss of $59 million the previous year.

It was the fifth time in seven years that the company ended the year in the red.

According to Andre Beer, president of ANFAVEA, the automakers' association, VW is likely to be joined by most of the other manufacturers in reporting a loss.

All were hit last year by the price freeze decreed by the government at the end of February 1986 as part of the Cruzado Plan anti-inflation package. That measure froze car prices at a time when parts' costs were increasing and fed a consumer boom that resulted in waiting lists of up to 2½ years on some models.

Beer said, "All the automakers took losses on their operations in the domestic market, and the only ones that may be saved are those that exported heavily."

Of the four manufacturers in Brazil — Volkswagen, General Motors, Ford and Fiat — only fourth-place Fiat is believed by industry observers to have ended the year in the black. That was due more to its $350 million in exports than to its 13 percent share of the domestic market.

Nonetheless, all manufacturers are pressing ahead with programs for new models. All investments are, in fact, reinvestments or loans from headquarters.

GM is investing $500 million to launch the Kadett in late 1988. Also for next year, Ford is working on a modified Orion — currently known as the Nevada — at a cost of around $100 million. Fiat plans to invest $150 million between now and the end of the decade. VW, despite its losses, invested $123 million in 1986, mainly on the project to export its Fox to the United States.

On the other hand, the lack of profitability resulted in significant changes in the industry last year. The most dramatic was the formation of the Autolatina holding company composed of VW and Ford operations in Brazil and Argentina.

The two companies are already carrying out preliminary work on sedans and station wagons. The models will use common powertrains and other components but will have distinctive exterior and interior design. The cars will be introduced at the end of the decade.

Brazilian exports are expected to increase dramatically this year, some 50 percent in dollar terms, according to Beer. He estimated that 1987 exports could top $2.5 billion, compared with $1.7 billion last year.

He said that, for the first time, the bulk of the industry's export earnings will result from sales of built-up cars to developed world markets. "In 1987, our two main export markets will be the United States and Italy," he said.

VW projects exports of $800 million this year compared with $226 million in 1986. Fiat, which this year will be exporting some 130,000 vehicles including the Duna subcompact and Duna Weekend station wagon to Italy, expects to chalk up $500 million.

VW

FROM PAGE 1

fury here, most analysts forecast little long-term damage for Volkswagen. The Wolfsburg giant, they say, has the financial wherewithal to absorb the loss and has a solid foundation for recovery of the stock price.

"The underlying business is still very strong," said one analyst.

Volkswagen disclosed two weeks ago that it may have been defrauded by unidentified persons outside VW, possibly in collaboration with company insiders. The perpetrators, VW said, forged currency futures documents, thereby exposing the company to a massive loss as the dollar fell precipitously against the German mark.

The practice of buying currency ahead to guarantee a rate of exchange is widely used by companies to protect against fluctuations.

Volkswagen has said little about the swindle, although a few details of the crime were revealed last week.

The chairman of VW's supervisory board, Karl Gustav Ratjen, said in a West German television interview that the fraud involved erasure of computer tapes and tampering with programs in 1984.

Ratjen said the scandal involved "a degree of criminal energy . . . that until now was unimaginable in a German company."

In a separate interview, VW Chairman Carl Hahn said he believed the suspected criminal activities were centered outside the company.

According to one report, VW's internal investigation was launched after the Hungarian National Bank refused to honor a forward dollar contract which came due on Feb. 18. The bank reportedly said it had no record of the contract.

The bank later confirmed that it helped identify fraudulent activities and that it offered to assist VW in its inquiry.

Two executives have been fired by VW in connection with the scandal, although both were already on their way out. Chief Financial Officer Rolf Selowsky was due to leave when his five-year contract expired in May. Instead, the supervisory board sought and received his resignation three days after the fraud was revealed. A spokesman said Selowsky was not implicated in the manipulation, but rather was dismissed on the principle of managerial responsibility.

Selowsky was said to be leaving in May because of a disagreement with Hahn's plan to create a new position on the management board with financial oversight responsibility for international operations.

Upon leaving, Selowsky was to have signed a new five-year contract as a VW consultant. But the status of that agreement was unclear last week.

Selowsky will be replaced on an interim basis by VW finance executive Peter Frerk. Dieter Ullsperger, a top financial officer at Kloeckner-Humboldt-Deutz, a West German engineering concern, had previously been tabbed as Selowsky's permanent successor.

Burkhard Junger, head of VW's foreign exchange department, had resigned in January over "differences of opinion" regarding the company's currency exchange policy. Junger had until September to formally leave the company, but left immediately in the wake of the scandal. According to some reports, he is now cooperating with state and federal prosecutors.

Six other VW employees, including Gunther Borchart, head of the finance and payments division, and Siegfried Muller, chief of foreign exchange clearing, were suspended, along with four currency traders on staff.

Though laying low last week, Junger protested his innocence in a story appearing in the West German magazine Der Spiegel. But he pointed to the possible involvement of the Hungarian National Bank and Joachim Schmidt, a Frankfurt currency broker.

The Lower Saxony state prosecutor's office, which has been joined on the case by federal authorities, said it is focusing its investigation on the Frankfurt banking community. A spokesman said the office is seeking to question Schmidt, a senior partner in a Frankfurt foreign exchange firm.

However, neither Junger nor the prosecutor's office specified the nature of the broker's suspected involvement. Schmidt was reported to be out of the country last week.

Meanwhile, a Frankfurt attorney revealed last week that he had approached Ratjen in February with information from an unnamed client who he said was familiar with the fraud and wished to cooperate with Volkswagen.

The attorney told a Frankfurt newspaper that Ratjen spurned the request to meet with his client. VW quickly issued a statement saying that Hahn met with the lawyer on Feb. 24, but that the attorney had received new instructions from his client not to release names or other information.

One consequence of the scandal last week was West German Finance Minister Gerhard Stoltenberg's statement that the investigation raises doubts about whether the government should proceed this year with plans to sell its 20-percent stake in the company.

Stoltenberg said the affair calls into question whether VW management has kept financial matters "under appropriate control."

The VW sell-off is part of a broader plan by the West German government to unload its shares in private companies. Its holding in VW has been valued at about $1.6 billion at current rates.

Volkswagen has said the loss will not affect the group net profit for 1986, expected to be in the realm of 600 million marks ($326 million), or about the same as 1985. The automaker has also said it will go through with its planned dividend payments this year.

Analysts say VW will dip into cash reserves to cover the foreign exchange loss.

"These German companies have huge amounts in reserve," said Sanjay Dabysing, an analyst at DRI-Europe in London. "The bottom-line results you see may have nothing to do with the actual profit."

The lack of impact on the bottom line reflects a frequent criticism of financial disclosure laws throughout much of Europe. Companies here have considerable leeway to conceal costs and assets in nondescript line items which are not reflected in published profit/loss results.

PRODUCTION

Year's output off 7%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers' scheduled production of 169,353 cars last week, 1.32 percent more than the previous week's 167,143, but 4.32 percent less than the year-ago week's 176,995.

So far this year, 1,844,187 cars have been assembled, 7.17 percent below the 1,986,709 completed last year at this point.

Companies split last week's estimated production as follows: General Motors, 52.59 percent; Ford Motor Co., 25.94 percent; Chrysler Motors, 11.46 percent; Honda of America Manufacturing Inc., 4.32 percent; New United Motor Manufacturing Inc., 2.36 percent; Nissan Motor Manufacturing Co., U.S.A., 1.72 percent; Volkswagen of America, 1.15 percent; and American Motors, 0.46 percent.

GM's Lansing (No. 2) plant is idle this week for inventory adjustment, affecting 3,500 workers. The plant is scheduled to resume output on April 6.

GM's Norwood, Ohio, plant is expected to resume production today (March 23). The plant has been idle for two weeks because of a material shortage.

As previously reported, GM's Arlington, Texas, facility remains down this week (March 23) for inventory adjustment. The plant is scheduled to resume output March 30.

Saturday (March 21) overtime was slated for GM's Lansing (No. 1) plant.

Ford's Dearborn, Mich., plant also was scheduled for Saturday overtime. All Ford plants are slated for daily overtime this week.

Chrysler's Newark, Del., and Sterling Heights, Mich., plants were scheduled for Saturday overtime and are slated for daily overtime this week.

Canadian car build tops 200,000

Canadian automakers' built their 200,000th car of the year last Thursday (March 19), 12 days behind 1986.

So far this year, 206,677 cars have been assembled, 17.36 percent below the 250,079 completed last year at this time.

Last week's targeted auto production of 17,820 cars was 1.18 percent more than the prior week's 17,613 but 27.58 percent below the year-ago week's 24,605.

Truck production totaled 18,682 units last week, 5.52 percent more than the previous week's 17,704 but 4.57 percent below the year-ago week's 19,576.

Year-to-date, 184,672 trucks have been built, 15.06 percent below the 217,416 assembled last year at this point.

General Motors' Ste. Therese, Quebec, plant remains idle for model changeover. The plant has been down since mid-February and is expected to resume output May 18.

Truck production dips for week

Domestic truck output of 79,355 units last week was 1.37 percent below the previous week's 80,458 but 5.94 percent above the year-ago week's 74,909.

Year-to-date, 860,735 trucks have been assembled, 4.28 percent more than the 825,428 completed last year at this point.

General Motors slated Saturday (March 21) overtime at four plants: Lordstown, Ohio; Pontiac, Mich.; Detroit; and Flint, Mich.

Ford Motor Co. scheduled Saturday overtime at its Wayne, Mich., plant.

All Ford truck plants are slated for daily overtime this week (March 23).

Chrysler Motors' Warren, Mich., plant is scheduled for daily overtime this week.

Australian auto tariffs under fire

By Pedr Davis
SPECIAL CORRESPONDENT

SYDNEY, Australia — The Australian vehicle importing industry is attempting to persuade the federal government to reduce import tariffs. This, it says, would help curb a situation that has reached disastrous proportions.

Several industry executives have declared that the tariff on fully imported cars (currently 57.5 percent on landed cost) should be cut by an amount equal to the devaluation of the Australian dollar.

This country's dollar has fallen by almost 50 percent in respect to the Japanese yen and by 25 percent in respect to the U.S. dollar.

"A staggering $63,000 ($43,450 U.S.) of the price of this new car goes to the government in tax," said Ron Meatchem, managing director of BMW Australia, during the launch of the new $127,000 ($87,585 U.S.) 7-series model at the Melbourne auto show.

Meatchem said that the slump in locally made cars was costing the government huge sums in lost sales tax. This tax stands at 20 percent for cars under $30,000 and 30 percent on more expensive models.

Imported cars, which had been averaging 20 percent of total sales compared with early last year, are now below 10 percent.

In a strange alliance, the trade union movement is siding with the vehicle importers. The secretary of the NSW Vehicle Builders' Union, Bill Taylor, said the sales slump will mean continuing job losses.

Taylor blamed high interest rates, huge price rises following the devaluation of the Australian dollar, the fringe-benefit tax and the introduction of the so-called super tax on luxury cars imposed late last year.

PPG to operate Reatta paint shop

LANSING, Mich. — General Motors and PPG Industries announced an innovative agreement in which PPG will assume total responsibility for operation of the paint shop for GM's Buick Reatta.

The two-seater, which will be introduced in spring 1988, is being built at the Reatta Craft Centre, a part of the former Oldsmobile complex here. Production of pilot models began a week ago.

"Greater responsibility for suppliers is now an industry trend," said J. Robert Thompson, manager of the Buick Reatta Craft Centre. "Having PPG operate the paint shop for Buick Reatta is a natural extension of supplier responsibility, integrating PPG's coating expertise with the auto production expertise of GM."

GM will provide the area for the PPG paint facility, and PPG will spend $1 million to equip it.

The GM and PPG paint operations staffs have been consolidated under the PPG area manager, who reports to the facility's operations manager while remaining a PPG employee. The PPG area manager also is as a member of Thompson's GM staff.

During a transition period, GM salaried personnel policies will be administered jointly by PPG and Buick Reatta management. Eventually, all salaried paint shop personnel will be employed by PPG.

STRIKES

New-model launches marred at GM, Ford

By Michelle Krebs, Joseph Bohn and David Versical
AUTOMOTIVE NEWS STAFF REPORTERS

Important new-product launches at General Motors and Ford were marred by worker strikes — leaving dealers short of Mercury Tracers and threatening the supply of GM's full-sized pickups at a time when brisk sales were anticipated for both.

In the strike begun last Thursday by 9,000 hourly workers at GM's Truck & Bus plants in Pontiac, Mich., the issues were the same controversial ones expected to be in the forefront of this year's auto negotiations at GM and Ford — subcontracting outside the company, the elimination of job classifications, line speedups and health and safety.

The Pontiac plant is one of three producing the new C/K series pickups, scheduled for official introduction April 24. And if the strike lasts very long, it could hamper the launch of the highly touted truck, since Pontiac has been building 30 percent of the output.

Dealer-factory inventories included 30,200 C/K units as of March 20 — a four- to six-week supply if it sold at the high levels of its Ford and Chrysler competitors.

"No time is good for a strike," said Pontiac Local 594 President Donny G. Douglas. "But a lot of the marbles are in our corner now."

Workers at Ford's new plant in Hermosillo, Mexico, were also having a major impact on a new product launch — in this case limiting the supply of Lincoln-Mercury Division's Tracer, which officially debuted last Thursday, because workers were in the midst of a month-long strike.

The Hermosillo strike left L-M's 2,750 dealers with an average of less than two Tracers each at the onset of the largest advertising campaign in the division's history, estimated to cost $38 million.

AUTOMOTIVE NEWS/JOE WILSSENS

9,000 hourly workers at GM's Truck and Bus plants in Pontiac, Mich., walked last Thursday

Since the new plant had been turning out 200 cars a day, the walkout has cost the company about 4,000 units during the last four weeks. But L-M officials said last week that with about 3,600 cars in dealers' hands and the advertising in place, it would go ahead with the launch despite the uncertainty of future supplies.

L-M dealers view the Tracer as particularly important because it finally gives them a small car they can call their own. It replaces the Mercury Lynx, a subcompact that will be phased out by the end of the year.

Kevin Darcy, sales manager at Bay State Lincoln-Mercury in Framingham, Mass., had sold two Tracers and had eight others in stock last week.

"It gives us a car that is entirely different than a Ford car," he said. "It would be nice to have about 10."

Other L-M dealers said they had about five Tracers in stock. Those dealers outside major cities, especially those teamed with Ford, were expected to have lower supplies.

Meanwhile, negotiators for Ford and the Hermosillo local of the Ford Motor Co. Workers Union appeared to be far from a settlement. The two sides were scheduled to meet late Friday for their first session in a week.

According to Edgardo Vazquez, strike committee president, the union has asked for a 70

GM cuts output plan by 100,000

By Michelle Krebs and Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Bloated inventories have forced General Motors to cut close to 100,000 cars from its second-quarter production schedule, which could result in even more layoffs than occurred in the first quarter.

GM declined to confirm the scheduling adjustment but sources both within GM and on the outside said GM scaled back its original second-quarter production schedule by about 9 percent to roughly 1,042,708 units. That was down 2 percent from second-quarter production in 1986.

While GM is cutting its production, Ford Motor Co. boosted its second quarter production schedule by 52,000 cars to 485,000.

The most recent production adjustment at GM is yet another in a trend that has been its story of the 1987 model year. And industry analysts predict it won't be the end of the trend. They expect even deeper cuts in production schedules before

AUDI

$5,000 discounts offered to owners

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Audi of America will offer 140,000 owners or lessees of Audi 5000s a $5,000 discount on a 1987 model.

The direct mail, 90-day program, called Audi Private Purchase Plan, is tailored to assist current owners. The program runs from April 1 to June 30.

It is the latest move in a campaign to bolster Audi's image, improve sales, reduce inventories, reassure owners and support resale value of 5000 models. All those problems stem from the "unintended acceleration" controversy.

"What we're trying to do is show our loyal owner base that we're absolutely committed to the American market," an Audi spokesman said.

"These people made a commitment to us, and we're making a commitment right back," he said.

"We're not looking for conquest sales. We want to help our own."

Chevrolet to fight imports with '88 entry-level cars

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chevrolet will offer entry-level versions of the Japanese-built Sprint and Spectrum this fall to compete head-to-head with the Hyundai Excel and other small cars priced under $6,000.

The entry-level Sprint, which will be the lower-priced of the two models, would be priced just over $5,000, were it priced today, sources said.

The Sprint is made by Suzuki, and the Spectrum is made by Isuzu.

Chevrolet would not confirm the move, but sources said the division will offer the entry-level models to fill a void left by the discontinuation of the Chevette.

The Chevette had a base price of $4,995 when production ended in December. Dealers said the $4,995 price tag drew showroom traffic. Dropping the Chevette left Chevrolet without a model priced closer to $5,000 than to $6,000 and left dealers without a price leader.

U.S. Alfa dealers safe, Fiat says

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

TURIN, Italy — Though courted by Chrysler and others, Fiat will stick with its present Alfa Romeo dealer body in the United States, at least until the Alfa 164 luxury model debuts in America late next year.

Fiat Auto Chairman Vittorio Ghidella said in an interview that Fiat's answer to potential U.S. partners is "we must wait." In addition, he said that Lancia, the Fiat-owned marque now merged with Alfa, will not be reintroduced on the American market.

Ghidella also said a U.S. producer has offered to buy some of Fiat's Brazilian production for distribution in the United States, but he added that Fiat is not interested at this time.

Ghidella said he is "dubious" about the benefits of using an American manufacturer's dealer body to increase Alfa volume, and

Cappy says buyout would be 'positive' for AMC dealers

By Mary Connelly and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

In his first public comment on the proposed Chrysler Corp. buyout of American Motors, AMC President Joseph Cappy told a group of AMC's top dealers that the marriage would be a "positive thing for dealers."

But if the Chrysler buyout is finalized, Chryler will have the right to brand a Jeep with a Chrysler nameplate and sell it through its dealerships, according to documents filed with the Securities and Exchange Commission.

Cappy told the dealers at a three-day meeting in Naples, Fla., that "there is a lot still to be done," according to a dealer in attendance.

The AMC chief was said to be surprised but not shocked by Chrysler Corp.'s March 9 bid to acquire AMC.

Despite an upbeat atmosphere at the meeting, dealers reportedly expressed concern over who would be in charge of AMC's products at Chrysler and what — if any — Chrysler products would be available to AMC dealers.

Company representatives reportedly told dealers that they were confident that some Chrysler products would be sold through AMC dealers after the acquisition was approved, the dealer said. Several other AMC dealers interviewed last week said they hope Chrysler will make its popular minivans available to them.

In other developments last week, two bond-rating services upheld their ratings of Chrysler debt despite the proposed buyout.

Moody's Investors Service confirmed the long-term debt rating of Chrysler Corp. and its subsidiary, Chrysler Financial Corp. Moody's said it recognizes the "potential benefits of the proposed acquisition of AMC to Chrysler's business position and to its marketing and distribution capabilities."

Moody's termed "manageable" Chrysler's risks in seeking expanded plant capacity "during a period of industry stress" and in view of AMC product liability litigation.

Moody's said the purchase of AMC "undercuts some of the progress Chrysler has made in improving its financial condition and cost structure." It also noted that if the purchase is completed, Chrysler will assume "substantial debt and unfunded pension liabilities" and will acquire two "highly inefficient" plants.

But the rating service said the negative impact on Chrysler will be temporary. The acquisition, Moody's said, fits Chrysler strategy of strengthening its position in the sport/utility market. It also will give Chrysler "a much-needed modern assembly facility," Moody's said.

Standard & Poors also affirmed Chrysler's long-term debt ratings and removed the company from its CreditWatch, affecting about $19 billion of debt and commercial paper. S&P had placed Chrysler on its CreditWatch March 9 following Chrysler's announcement of its planned acquisition of AMC.

S&P said AMC's debt ratings remain on CreditWatch with positive implications pending the deal's outcome.

S&P said it takes "a strongly negative view of the AMC acquisition, questioning both its long-term strategic value and its high price, which totals about $2 billion including debt and pension liabilities to be assumed."

S&P said the purchase is an "aggressive attempt" by Chrysler to increase market share in time of intensive competition and departs from the company's strategy of minimizing fixed costs.

However, S&P said, existing operations' strong cash flow ultimately will offset the negative effect of the AMC purchase.

Documents filed with the Securities and Exchange Commission outlining Chrysler's intent to acquire the 46.1 percent share of AMC owned by Renault outline the following details regarding AMC products:

- Jeep: Chrysler will pay Renault $400 per Jeep vehicle up to a maximum of $200 million for any vehicle sold in excess of 900,000 between Jan. 1, 1987, and Dec. 31, 1991. The documents identified Jeep vehicles as "including Chrysler branded products" and those sold "through any channel."

This is the first indication that Chrysler may be considering putting its own name on a Jeep product and distributing it through its own dealer network.

AMC audit qualified; Chrysler bid unaffected

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The auditing firm Touche Ross & Co. qualified its statement on American Motors' financial results because of a $64 million arbitration award against AMC involving its former AM General subsidiary.

Touche Ross said it does not know how the award, which is being challenged in court by AMC, will affect the automaker's financial picture.

Spokesmen for AMC and Chrysler Corp. said the qualification will not affect Chrysler's bid to acquire AMC. The issue of indemnification was not raised in Chrysler's March 9 letter of agreement to purchase AMC stock from Renault.

The arbitration award, announced in February, was based on a 1980 dispute between AM General, a military vehicle maker formerly owned by AMC, and Emerson Electric Co. Emerson charged that AM General breached a contract that would have allowed Emerson to supply parts for AM General's new military vehicle, the Highly Mobile Multi-Wheeled Vehicle (HMMWV).

AMC sold AM General to LTV Corp. for $170 million in March 1983. As part of the sale, AMC agreed to indemnify LTV against any losses resulting from the Emerson claim.

AMC said it will "vigorously" challenge the arbitrator's decision in court.

72-month loans on Chrysler vans

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Credit Corp. has become the first of the Big Three captive finance companies to break the 60-month financing barrier by offering 72-month loans on its minivan lineup.

Chrysler Credit's strategy comes as dealers receive prices for the automaker's new stretched version of its popular Plymouth Voyager and Dodge Caravan minivans. The Grand Voyager and Grand Caravan, as they are called, are priced more than $800 above comparable editions of its standard-sized model. The new vehicles are 14.6 inches longer than the standard model and go on sale in April.

Six-year loans will be available on both standard-sized and stretched minivans.

Previously, 60-month terms were the longest available through Chrysler Credit, General Motors Acceptance Corp. and Ford Motor Credit Co.

Chrysler Credit said the 72-month financing is not yet available in California, Oklahoma and Utah but is expected as soon as Chrysler completes state law requirements regarding interest rates in those states.

The 72-month terms are not an industry first. While the captive finance companies have not offered six-year loans, banks have been offering 72-month loans for recreational vehicles and expensive luxury cars.

Chrysler said it is offering the longer loan terms because it wants to be able to promote lower monthly payments.

"We want to make sure that vehicle is available to as many people as possible," a Chrysler spokesman said. "We are trying to make that vehicle appeal to people who are on a monthly budget."

Chrysler Motors began producing the longer version of the minivan the week of March 16 at its St. Louis, Mo., assembly plant No. 2.

The stretched version is 190.5 inches long.

The Grand Caravan SE and Grand Voyager SE will carry a base retail price of $11,751, according to Plymouth and Dodge dealer sources. The Grand Caravan LE and Grand Voyager LE will retail at $12,561.

The $11,751 price of the Grand Voyager SE and Grand Caravan SE compares to a retail price of $10,875 for the standard-sized Voyager SE and Caravan SE.

The retail price of the Voyager LE and Caravan LE is $11,741, $820 less than the $12,561 price for the Grand Voyager LE and Grand Caravan LE.

The standard-sized Caravan and Voyager models also are available in a base edition, priced at $10,411.

Engines in the standard and stretch minivans are different.

Stretched version of Dodge Caravan

Chrysler's stretched minivans carry a standard four-cylinder, 2.5 liter engine. The standard-sized Caravan and Voyager carry a four-cylinder, 2.2-liter engine.

A new V-6, 3.0-liter engine developed by Chrysler and Mitsubishi Motors Corp. and produced by Mitsubishi will be offered as an option in both the standard and stretch models. The new engine will replace a 2.6-liter four-cylinder engine that had been offered as optional equipment on the standard-sized Caravan and Voyager.

Chrysler will have the capacity to produce 160,000 stretched minivans at its St. Louis plant, which underwent a $475 million renovation. The company will continue to produce the standard-sized minivans at its Windsor, Ontario, assembly plant.

Chrysler, which created a new market when it introduced the minivan in January 1984, sold 226,047 Voyagers and Caravans in the 1986 calendar year.

TERRIFIC

Chevrolet dealers hail Corsica/Beretta launch

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet dealers say the launch of the Corsica and Beretta has been the most successful since the introduction of the Citation in 1979.

Dealers contacted by Automotive News said showroom traffic has been brisk and early sales have been strong — stronger than on most new cars at a time when the market is soft.

The official introduction was March 12, though dealers have been selling the cars since early January. Chevrolet had sold 8,480 Beretta/Corsica models as of March 20. Its sales goal is 500,000 units annually.

Dealers said the reason for the successful launch is the styling, pricing and quality of the cars, the way the cars were launched, and the big promotion behind the cars.

In another sales success story at General Motors, the hot-selling Cadillac Allante nearly met its sales goal for the year in the first weeks after introduction.

In its first month on the market, Cadillac has taken 3,000 dealer orders for the $54,700 two-seaters. The division's goal for the year was 4,000. Retail sales so far are 247 Allantes, and it is not known how many dealer orders are actually customers' orders.

GM's new pickups are hot, too. Several GM dealers said they are selling all the new full-size pickup trucks they can get, though the official introduction date is not until April 24. The C/K trucks are sold through Chevrolet and GMC dealers.

Chevy dealers said customers have been drawn to their showrooms by the styling of the Corsica and Beretta. Dealers polled by Automotive News said they are impressed with the quality, though some mentioned that the aerodynamic styling and better quality are long overdue.

"It looks like the car we should have had two years ago," one said.

Early sales indicate the Beretta coupe is selling somewhat better than the Corsica sedan. Chevrolet expected that would happen initially but predicted the mix will eventually even out. Buyers of sportier cars such as the Beretta tend to be impulsive, wanting to be the first on the block with a new model, dealers said.

Suzuki hangs on to sales strategy

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

BREA, Calif. — Even when Suzuki of America reaches 49-state dealership representation and multi-model status late next year, it will not abandon the retailing philosophy that made it successful in launching its first automotive product, the four-wheel-drive Samurai.

N. Douglas Mazza, newly appointed vice president and general manager, said, "We tell all our people when they hire in that we are in the retailing business, not the automobile distribution business."

It is an important distinction for someone marketing in a maturing industry, especially one which has often considered itself different from traditional retailing, Mazza said.

"We are able to concentrate on a quick inventory turnover," he said. "That eliminates rebates and incentives. It's the most profitable way to run a dealership."

The key to quick turnover is accurate forecasting that is constantly updated to avoid oversupply, Mazza said. "You must forecast the market, not market the forecast," he said.

Mazza

The second ingredient to quick turnover is what Mazza calls a retail point of view.

"This product is made to sell at retail, so everything you do is oriented toward that, from the (dealership) facility to the environment," he said. "Our dealers have the accessories display right in the showroom instead of the parts department, because those accessories are most likely to be ordered while the customer is in the buying process."

Suzuki is averaging an 18-day supply. Sales are growing rapidly since the November 1985

Dealer hit for failing to check miles

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The license of Vic Hansen and Sons Inc., a used-car dealership in Beloit, Wis., has been suspended for 90 days because of odometer fraud. The suspension began March 2.

The dealership was not charged with actually tampering with odometers but with neglecting to verify the true mileage of 22 cars.

Wisconsin law requires a dealer to attempt to verify the true mileage of cars offered for sale and to inform customers if there is a discrepancy between the odometer reading and the actual mileage.

The Department of Motor Vehicles charged that Vic Hansen and Sons certified the readings of odometers that had been rolled back an average of more than 34,000 miles.

The cars, which had been brought from Kentucky, were purchased at a Chicago auction.

The Wisconsin courts concluded that by November 1980, the firm "knew or should have known that vehicles purchased wholesale from Kentucky dealers were likely to have had their odometers altered."

The suspension followed a three-year court battle in which Wisconsin Commissioner of Transportation Joseph Sweda's ruling of February 1984 was overturned in Rock County Circuit Court, then upheld by the Court of Appeals.

The Supreme Court reviewed the Appeals Court verdict in February and refused to reopen the case.

The original investigation involved 44 vehicles purchased at the Chicago auction and sold by the dealership between 1978 and 1981. The final charges involve only vehicles sold between November 1980 and September 1981.

The commissioner's decision said that although there was no evidence of tampering with the odometers of most cars in question, the Hansen firm should have suspected such tampering. The decision said that the Wisconsin Automobile and Truck Dealers Association had sent a bulletin to dealers in 1976 warning about odometer tampering by Kentucky dealers.

The Wisconsin association sent a subsequent bulletin on the problem in September 1980, and the Wisconsin Department of Motor Vehicles sent a letter about the problem to all dealers in October 1980.

According to court documents, the DMV sent a second such letter in October 1981.

"I'm very disappointed — the courts are wrong," said Gary Antoniewicz, of Antoniewicz and Gregg, Vic Hansen's attorney.

"They have watered down the definition of fraud," Antoniewicz said. "There was no evidence of fraudulent conduct." He said his clients said they didn't recall seeing the association's bulletins or the first letter.

"They said they saw the second letter and they quit buying cars from Kentucky after that," Antoniewicz said.

He said he foresees similar cases in Wisconsin. "If dealers don't read their mail, they can be charged with fraud," he said.

"To me, fraud means real egregious intentional action.

"Everybody in the trade now knows that cars from Murray, Ky., are suspect. But from 1978-81, what responsibility did a dealer have to know that?"

White Engine courting Big 3

CANTON, Ohio — The new owner of White Engine, a military and industrial engine maker, wants to supply the company's 3.7-liter, four-cylinder turbodiesel to manufacturers of Class 2 and 3 delivery vehicles.

Donald C. Stewart, an investment banker, who recently bought the company along with a group of White executives, said the company has discussed supplying the engine with representatives of the Big Three.

White's major business is supplying replacement engines for military Jeeps and trucks.

Stewart bought the company for approximately $57 million from John J. Lennon, White chairman, and the heirs of Edward Reddig. Reddig and Lennon bought White Engine from White Motor Corp. in 1976.

Stewart will be active in the management of the company as president and chief executive officer. Lennon will continue as chairman.

The company's name will be changed to Hercules Engines Inc.

The company was founded by automotive pioneer Henry Timken with the Hercules name in 1915 and is considered to be the nation's oldest manufacturer of diesel engines for motor vehicles.

New plant in Canada to be Honda supplier

TOTTENHAM, Ontario — Newly formed F&P Manufacturing will build an automotive parts facility here to serve a nearby Honda assembly plant.

The $33.75 million (U.S.) facility is a joint venture by the Japanese firms Fukuda Press Industry Co. and Yutaka Giken Co. It will produce front engine mounts, center beams and rear axle beams by this fall.

Ford executives to share record $167 million in bonuses

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co., coming off a record $3.3 billion profit in 1986, has set aside an all-time high $167 million for executive bonuses.

The payout amounts to about 69 percent of the $241.9 million that could have been paid under the company's bonus formula. But Ford has earmarked $74.9 million of that total for other company business.

Last year, Ford distributed $125 million, or 76 percent, of the $164.4 million allowed by the formula. The company's top 44 officers averaged $363,227 each in bonuses, while payouts for the remaining 5,559 eligible executives averaged $19,611 each.

The average bonus will likely be higher this year because fewer workers will be sharing a larger pool. The exact number of eligible employees, whose ranks have been dwindling in ongoing white-collar staff cuts, will be revealed in the company's annual proxy statement, due to be issued by mid-April.

The UAW, in a harshly worded statement, criticized Ford's bonus payments.

The union accused the company of succumbing to greed at a time when suppliers and lower-level employees are tightening their belts in the name of efficiency.

"Ford's profitability is no excuse for dipping into the till in this fashion," said UAW Vice President Stephen P. Yokich, who will lead the union as it negotiates a new contract with Ford later this year.

"For every brilliant decision the executives made in 1986, they made another dumb decision, and this one tops the list," he said.

This year's payout marks the fourth consecutive year that payments have been made under the company's three-decade-old bonus plan. No bonuses were distributed from 1980-82, when Ford lost money.

In 1978, the company adopted a rule allowing it to put aside some of the bonus allowances for other purposes. Before that, any supplemental compensation that was not awarded in a given year was put in a reserve bonus pool. Executive bonus payments of $70 million in 1979, for example, included $31 million from that year's profits and $39 million carried over from previous reserves, a spokesman said.

General Motors has allocated $169 million for bonuses this year. Chrysler Corp. has said it will pay up to $102 million.

Information on Ford's bonuses was included in its 1986 annual report, which was released last week. The report noted that while 1986 was Ford's most profitable year ever, the company will continue efforts to improve quality and cut costs.

The company also described this year's UAW negotiations as "one of the most critical and sensitive challenges" of the year. Job security and the need to improve competitiveness will be at the forefront of the discussions, the report said.

†—Estimate

Sales drop 3% for mid-March

Sales of U.S.-built cars slipped a bit in mid-March. The total was 217,939, down 3.87 percent from the 226,712 sold in the March 11-20 period a year earlier.

The daily selling rate in mid-March was 24,215, compared with 22,728 for March 1-10. The daily selling rate has increased steadily, albeit modestly, during 1987. Gains have been posted in all but one of this year's 10-day periods.

However, the mid-March total of 24,215 was lower than the year-ago score of 25,190.

Increases in retail deliveries of new U.S.-made cars were reported by Honda, up 48.02 percent over year-earlier sales, and by Ford, up 15.22 percent. Nissan had an increase of 10.72 percent.

American Motors reported a drop of 62.38 percent. Volkswagen had a decline of 35.03 percent, and General Motors had a fall-off of 14.75 percent. Chrysler Motors dealers reported a 3.67 percent dip in sales in the period.

Toyota, which did not sell U.S.-made cars a year ago, reported mid-March sales of 995 units.

Chevrolet Corsica/Beretta had sales of 2,726 units in the 10 days, and Cadillac Allante had 107.

OBITUARIES

H.J. Cordes

PASS CHRISTIAN, Miss. — H.J. "Pete" Cordes, 64, retired Chevrolet truck advertising manager, died here March 4. Mr. Cordes was with Chevrolet 43 years. He became supervisor of advertising media in 1962, passenger-car advertising manager in 1971 and truck advertising manager in 1977. He supervised Chevrolet's award-winning "Lean on Me" truck advertising campaign in 1985-86.

Meet two of the most efficient moving parts in the Mack® organization. Al Rix and John Guizzetti represent an emerging new generation of distributors, driven by superior customer service and leadership in medium and heavy-duty trucks.

In just 10 years, Al's distributorship has become the dominant force in the Harrisburg, Pennsylvania area, commanding nearly a 30% share of its market segment. Now he's investing in a brand-new facility for even better coverage. John joined Mack in 1981, and has won back-to-back Distributor of the Year honors for his Richmond Hill, Ontario location in Canada. Today, he owns over a 50% share of his marketplace.

We're proud of Al, John, and the hundreds of other talented Mack distributors who consistently raise the standards of performance. At Mack, they are the indispensable components that can't be factory-installed.

PRODUCTION

2-millionth car built

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automaker's built their two-millionth car of the year last Friday (March 27), four days behind 1986.

So far this year, 2,013,069 cars have been assembled, 4.94 percent fewer than the 2,117,577 completed last year at this point.

Targeted auto output of 167,086 cars last week was 2.37 percent below the previous week's 171,149 but 26.45 percent more than the year-ago week's 132,138, which reflected the Easter holiday.

Last week's scheduled production was split this way: General Motors, 52.48 percent; Ford Motor Co., 25.59 percent; Chrysler Motors, 12.15 percent; Honda of America Manufacturing Inc., 3.98 percent; New United Motor Manufacturing Inc., 2.39 percent; Nissan Motor Manufacturing Co., U.S.A., 1.75 percent; Volkswagen of America, 1.20 percent; and American Motors, 0.46 percent.

GM's Pontiac Fiero plant in Pontiac, Mich., is idle this week (March 30) for inventory adjustment, affecting 1,000 workers. The plant is scheduled to resume output April 13.

The GM Arlington, Texas, plant resumed production today (March 30). The plant was idle for two weeks for inventory adjustment.

As previously reported, GM's Lakewood, Ga., plant will be idle until early May for model changeover.

Saturday (March 28) overtime was slated for GM's Fairfax, Kan., plant.

Chrysler's Detroit plant was scheduled for Saturday overtime.

Daily overtime is slated this week for Chrysler's Newark, Del., and Sterling Heights, Mich., plants.

Trucks boost lead over '86 total

U.S. truck production continues to inch farther above the 1986 year-to-date total.

So far this year, 941,448 trucks have been built, 6.47 percent more than the 884,219 assembled last year at this point.

Last week's scheduled output of 79,883 units was slightly (0.38 percent) below the prior week's 80,185 but 33.58 percent more than the year-ago week's 59,801. The year-ago week's production was affected by the Easter holiday.

Ford Motor Co. slated Saturday (March 28) overtime at its Norfolk, Va., and Twin Cities, Minn., plants.

All Ford truck plants are scheduled for daily overtime this week (March 30).

Daily overtime is scheduled for Chrysler Motors' Warren, Mich., plant this week.

Canadian trucks reach 200,000

Canadian truck production passed the 200,000 mark last Friday (March 27), 10 days behind 1986.

Canadian car production reached 200,000 a week earlier.

So far this year, 201,818 trucks have been assembled, 12.95 percent below the 231,853 completed last year at this point.

Last week's estimated truck production of 18,472 was 6.43 percent more than the prior week's 17,356 and 13.49 percent more than the year-ago week's 16,277.

Car output of 17,820 last week was 1.61 percent more than the previous week's 17,538 but 12.67 percent below the year-ago week's 20,405.

Year-to-date, 224,215 cars have been built, 16.94 percent below the 269,952 completed last year at this time.

As announced earlier, General Motors' Ste. Therese, Quebec, plant will be down for model changeover until May 18.

BMW opens prep center in Georgia

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

MONTVALE, N.J. — BMW of North America opened its new vehicle preparation center (VPC) in the port of Brunswick, Ga., last week as part of an estimated $20 million program designed to bring all BMW vehicle preparation under the corporate umbrella.

The new center will serve 54 dealers in the Southeast.

Michael B. Jackling, executive vice president of BMWNA, said the BMW-owned VPCs "give us the capability to deliver automobiles in showroom condition."

The program began in 1985 when BMW established a pilot VPC in LaPorte, Texas, near Houston. The company then was studying the benefits of operating its own prep centers and decided late last year to do so.

The VPCs are part of BMW's $100 million building and development project, which includes a new corporate headquarters near Montvale as well as regional buildings.

Eventually, BMW will operate four prep centers. The Texas site is already on stream and Brunswick will be fully operational in mid-1988. Until then, the company has contracted with International Auto Processing, also in Brunswick, to perform non-mechanical preparation work on the cars.

BMW has a contract to buy land in Point Hueneme, Calif., and also is considering several sites in the Northeast for a VPC.

Joachim Frings, vice president of engineering, said the company will continue to use the Port Newark-Elizabeth, N.J., port while looking for a Northeast location.

Late last year, BMW decided not to use Jacksonsville, Fla. The company cited air pollution, which damaged the finish of the cars, as a reason for leaving that port.

Brunswick was selected as the port and VPC site for BMW's Southeast operations.

The Brunswick VPC represents a $4.5 million investment for BMW in the building and equipment on a 25-acre site, which the company has leased for 15 years.

There is also an option with the Georgia Port Authority for three additional five-year extensions of the lease.

The Georgia facility will account for approximately 15 percent of BMW's national volume or about 16,000 units.

BMW says it won't enter domestic 'warranty war'

WASHINGTON — BMW is in the midst of introducing the most new models in its history as part of a bid to become the world leader in the luxury-car class, but it has no plans to match the extended warranties offered by domestic manufacturers.

"We didn't enter the first American warranty war, and we will not enter the second warranty war," said Michael Jackling, executive vice president of BMW of North America.

Calling the limited powertrain protection of the extended warranties a "hollow claim," Jackling said, "It's cheaper to extend the warranty than to give a $2,000 rebate or low financing."

Japan's sales may fall short of U.S. quota

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Importers are preparing for the possibility that for the first time some Japanese companies will be unable to sell their entire quotas of 1987 cars.

"The 2.3 million Japanese car sales mark is in jeopardy in 1987," said Doug Mazza, vice president and general manager of Suzuki of America Automotive Co., Brea, Calif. "They may make it, they may not."

Robert Stallsmith, sales vice president for Mitsubishi Motor Sales of America, Fountain Valley, Calif., agrees with Mazza's assessment. "More than one Japanese manufacturer may be unable to sell its quota. If we all do, it will be one tremendous struggle," he said.

Several factors have combined to threaten the fulfillment of the quota, imposed by Japan's Ministry of International Trade and Industry.

Among them: a surge in inventories of unsold cars, a dramatic strengthening of the yen that has pushed up retail prices and squeezed Japanese automaker profits, growing supplies of Japanese-designed cars built in the U.S., a downturn in total U.S. car sales in 1987 and increased competition from new entry-level marketers and from the United States and Europe in the upscale segments the Japanese have been targeting.

Hardest hit are the small and medium-sized importers and the captive imports of Chrysler Motors and Chevrolet. They are faced with the prospect of huge stockpiles as they enter the new quota year, which began April 1.

The surplus of Japanese cars will

TRUCKS: *Class 8 makers outline plans for future as ATD stages convention in Dallas*

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DALLAS — Medium- and heavy-duty truck manufacturers are generally upbeat about sales prospects this year, though they still see more mergers and shakeouts on the horizon.

Such consolidations were major topics of discussion at this year's American Truck Dealers convention. The five-day event winds up tomorrow (April 7).

But talk also centered on upbeat sales forecasts. Manufacturers are projecting sales of 115,000 to 120,000 Class 8 trucks for the 1987 calendar year, up from 112,871 last year.

Still, sales more on the order of 150,000 would be needed to sustain all the players and the production capacity in the industry, said Peter Rupp, chairman of Freightliner.

By 1990, demand is expected to be "up a bit" from current levels, according to executives such as Thage Berggren, president of Volvo White, though it's unlikely to reach the 150,000 level.

For the time being, though, companies like Navistar, Mack, Freightliner, Volvo-White, Ford and PACCAR report strong increases in new-vehicle orders.

Some of those companies are working overtime. But John Curcio, chairman of Mack Trucks, said most of the sales and production activity in Class 8 trucks usually takes place in the earlier part of the year.

Meanwhile, for many companies, this is a pivotal year.

Volvo-White and General Motors are currently forging their new Volvo GM Heavy Truck Corp., expected to begin operations Jan. 1.

During this transition period, they also are working diligently to retain GM's market share and owner base.

In setting up their new company, officials will eliminate about 210 of their current combined 510-dealer network.

As Berggren pointed out, "It is important that we assign (Volvo GM Heavy Truck Corp.) dealers a big enough territory to live on. If we do that, we'll end up with 300 AORs (areas of responsibility)."

Mack is currently locked into critical negotiations with the UAW — negotiations that will determine where some of its key products are sourced.

'Progressive' work pacts split UAW; lasting anger is feared

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC, Mich. — Last week's quick strike settlement at General Motors' Truck & Bus complex signaled a victory for UAW members who feel strong-armed by automakers into accepting so-called "progressive" work methods.

The Pontiac settlement underscores a widespread problem between union and management, a philosophical battle over teamwork versus territorial rights. And beneath the surface are basic fears that if teamwork is successful, it can have a divide-and-conquer effect on union solidarity.

In the end, it comes down to trust and cooperation — underlying themes in this year's labor talks at GM and Ford. In settling with UAW Local 594 in Pontiac, GM agreed to restore job classifications previously eliminated by the "team method" of production, which combines and rotates jobs rather than the traditional system where each worker has a specific job and uses seniority rights to change jobs.

Many union members — such as Claude Thornton, president of the UAW Local 93 in Leeds, Mo. — feel workers are being forced to accept the team approach or lose their jobs. But the pointman on the other side, UAW Vice President Donald F. Ephlin, says it's all part of understanding where the future of the auto industry lies.

"We're being whipsawed with the blessing of

McDonald: GM may close more parts plants

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors President F. James McDonald said GM might close more components plants after completing its study of the competitiveness of parts operations.

"I wouldn't say that the possibility (of more closings) doesn't exist in the next year," McDonald said in an interview.

GM is evaluating every product line within its component groups. Each product line is graded on competitiveness, with the most weight given to quality and cost. Then, each line is ranked under GM's system that gives it a red,

Japanese given parts warning Page 6

Japanese sales dip in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Sales of Japanese cars in western Europe continued to fall in February following a sharp reduction in exports to Europe late last year.

With stocks at a low level, sales by Japanese manufacturers were down more than 10 percent through the first two months of 1987. Combined market share in January and February was 9.7 per cent, compared to 11.7 percent for all of 1986.

Overall car sales in Western Europe were marginally behind the same period last year. The two-month total was 1,833,900 compared with 1,838,500 in 1987.

Fiat Auto held onto the sales lead over Volkswagen Group even without its new acquisition, Alfa Romeo, included in the Fiat total.

The sales figures are derived from industry estimates compiled by Automotive News.

Under mounting pressure from European governments, Japanese makers sharply reduced shipments to Europe in November and December of last year. But exports to Europe increased 38 percent in January over the 1986 total, prompting the European Commission in Brussels to threaten Japanese producers with broad sanctions.

European automakers reportedly have agreed on a proposal that will be submitted to the commissior.. It would limit Japanese sales in the Common Market to about 11 percent until the European share in Japan rises from its current 2 percent to at least 5 percent. The proposal would apparently retain current quotas in Italy, France, Spain and the United Kingdom.

Mexico strike stifles Tracer intro in U.S.

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Weeklong negotiations failed to settle a strike at Ford Motor Co.'s new assembly plant in Hermosillo, Mexico, while U.S. dealers were confronted with shrinking or nonexistent supplies of the Mercury Tracer.

The five-week walkout has cost production of 5,000 cars and has kept another 1,200 of the subcompacts locked inside the complex.

Lincoln-Mercury's 2,750 dealers in the United States have been left to share 3,600 vehicles that were shipped before the strike. Some dealers have received no Tracers, and others have nearly sold out their stock as L-M continues the most expensive new product advertising launch in its history.

"As far as I'm concerned, the situation is critical now," said Edsel B. Ford II, L-M general marketing manager. "But then I'm a marketing guy, and I want the cars."

The company has other concerns, however. Louis R. Ross, Ford executive vice president for North American Automotive Operations, noted last week that the workers are seeking "two to three times what the government and other industries are recommending. So it's kind of bad practice to establish your first contract at two to three times the local levels."

The 850 strikers agreed to a two-year contract a year ago, with a provision that allowed wages to be renegotiated, a Ford spokesman said.

According to Hector Uriarte, general secretary of the Hermosillo local of the Ford Motor Company Workers Union, the recommended wage increase in the state of Sonora, which includes Hermosillo, is between 23 percent and 32 percent. The Mexican government sets the guidelines in an effort to control the country's serious inflation problem.

He said that most workers make less than 118,000 pesos ($96) per month. The union is seeking a 70 percent wage increase.

The plant opened in November and is currently supplying cars exclusively for the U.S. market.

Elsewhere in Mexico, 2,500 workers at Nissan Mexicana walked off their jobs last Monday (March 30) at the automaker's assembly and engine machining plant in Cuernavaca. They are seeking a 60 percent wage increase; the company has offered 50 percent.

Automotive News Staff Correspondent Stephen Downer in Mexico City contributed to this report.

2CV: bowed at 1948 Paris Motor Show

'IMMORTELLE'

Citroen to produce 2CV in Portugal

By Jean-Jacques Renaux
STAFF CORRESPONDENT

PARIS — Jacques Calvet, the head of Citroen and its parent company, PSA (Peugeot), often has said, "La 2CV est immortelle."

Calvet owned a 2CV as his first car. And, true to his word, Calvet hasn't killed the simplistic, 38-year-old small Citroen.

However, production of the 2CV will move to Portugal next year.

Although everybody still seems to love the 2CV, only about 56,600 were sold in 1986, and it is no longer feasible to keep the 95-year-old LeVallois plant in Paris working intermittently to produce a car that sells for $4,450 to $5,165.

Interestingly, France has not been the top market for the 2CV in recent years. In 1986, Germany bought 15,700 units — compared to 14,000 sold in France.

It is ironic that the young German "greens" (the ecology-minded people) supported the car, since one of the 2CV's problems is that its small, air-cooled, 2-cylinder 600-cc engine cannot meet the U.S.-type exhaust emission standards due to be implemented in some non European Economic Commission countries.

For that reason, sales in Austria and Switzerland will end this year.

Development of the 2CV was carried on secretly during World War II, and the 2CV bowed at the Paris Motor Show in 1948. Someone reportedly joked: "Do they supply the can-opener with it?"

Still, in 1950, the 2CV had a waiting time for delivery of six years. More than 5 million of the cars have been produced.

At Mangualte in Portugal, production capacity will be only 70 to 80 cars a day, compared to the current 150 a day.

Is the end of the car really in sight? Not yet. Citroen still hopes to reach an agreement with the government of India about transferring production there.

Daf seeks U.S. sales via PACCAR dealers

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

van der Padt

EINDHOVEN, Netherlands — Daf Trucks, the only major European truckmaker without operations in the United States, is negotiating to sell a medium-range Leyland model through PACCAR's dealer network.

In an interview here, Daf Chairman Aart van der Padt also said the company is interested in setting up a U.S. manufacturing base and might consider a small-scale equity acquisition as a entry to the North American market.

Van der Padt said he will meet soon with PACCAR President Charles Piggott to discuss a possible distribution arrangement.

Daf, which delivered just over 16,000 trucks last year, recently bought a majority interest in Britain's Leyland Trucks. It had already agreed to market Leyland's 8.3-ton Roadrunner medium truck in Continental Europe and may also sell the vehicle in the United States through PACCAR, a rival bidder for Leyland.

"I've met Mr. Piggott once and we are planning to indeed have a discussion," van der Padt said. "We don't know the U.S. market and they are, of course, very strong and well established and maybe we can develop a common interest."

The two companies are said to be considering annual volume of about 3,000 units.

The exploratory talks grew out of separate discussions PACCAR and Daf held with British government-owned Rover Group about the sale of Leyland.

"PACCAR showed an interest during negotiations with the United Kingdom government in certain product lines that could be marketed in the United States," van der Padt said.

Though the Roadrunner is seen as the most probable model for distribution, he said there may be other products in the Daf-Leyland stable for the United States.

But despite the possible distribution deal, van der Padt said, "In the long run, you should do a relatively big assembly or manufacturing job in the United States, not just importing" van der Padt said. "I suppose that could be the long-term answer to the fluctuations in the exchange rate."

Daf has been involved with a U.S. manufacturer before. Navistar once held a 37.5 percent share in the company, but sold out in the midst of its deep financial troubles in 1984.

"Our company is not financially strong enough to buy itself into that market as Mercedes and Volvo have done," Van der Padt said. "We have to look to other ways. But on a smaller scale, I wouldn't exclude equity participations."

As for potential partners in the United States, he said, "We are going to see PACCAR. We tried Navistar before, but that didn't work out. Maybe you have to go into special niches."

Merged with Leyland, Daf is now the sixth largest maker of heavy trucks in Europe, with combined production of more than 24,000 vehicles over 6.6 tons last year.

Ferrari sets up engineering consultant operation

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MARANELLO, Italy — A new engineering consultancy staffed by Ferrari design technicians has been spun off from the Italian manufacturer to take on outside contract work.

But unlike much larger engineering job shops at Porsche and Lotus, Ferrari Engineering S.p.A. is sticking to non-automotive clientele, according to Giovanni Razelli, Ferrari S.p.A. general manager

The subsidiary, which is made up of 20 engineers headed by Mauro Forghieri, is regarded as a way to generate new revenue and develop technologies while Ferrari car production remains low.

The unit was formed last year and moved into its own facility in January. It has signed consulting contracts with five companies — two machine-tool builders, a foundry, a special materials group and a robotics firm.

But so far, Ferrari Engineering isn't doing business with car companies, and Razelli indicated that things will stay that way. Parent company Fiat, which owns 50 percent of Ferrari, has reportedly vetoed the idea of servicing other automakers.

"All car manufacturers would be interested in the Ferrari engines," said Razelli. "We need Ferrari Engineering to develop our capability, not to sell to other carmakers."

Porsche's consultancy arm in Weissach, West Germany, has boosted the parent company's revenue by helping such relatively low-tech producers as Lada, and in the past, Seat develop complete new cars and engines. But Razelli said Ferrari Engineering is not big enough to take on similar projects.

"Porsche's size is 10 times our size," he said. "They have the devices to make tests and so on.

Razelli projected 1987 sales volume at about one percent of Ferrari S.p.A.'s expected turnover of 340 billion Italian lira ($26.1 million).

Ferrari reportedly wants the engineering arm to provide as much as half its revenue some time in the future. But Razelli cited a less lofty objective by the early 1990s.

"We have a goal that is very ambitious," he said. "We are too young to mention the goal officially. But to give an idea, we would like to achieve two or three times today, so 3 percent in five years. Then, we will see."

Though smaller in scale, the theory behind Ferrari Engineering is similar to that of Porsche and Lotus. Both firms have used consultancies to help pay the cost of keeping low-volume makers on the leading edge of new technology.

"The aim is to develop technological materials for production to pay for our necessities without increasing volume," Razelli said.

AMC, Ford extend incentives; Chrysler cuts off

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. and American Motors last week extended their retail incentive programs on selected 1986 and 1987 cars and trucks, while Chrysler Motors plans to end incentives April 10 on all vehicles except minivans.

On March 30, Ford said it would extend its low-interest rate and rebate incentive program on 1986 and 1987 Ford Taurus, Mercury Sable, Ford Bronco II and Ford Ranger models through April 30. Incentives for those vehicles were to end April 6.

The extension will allow Ford to keep pace with General Motors incentive programs on Buick, Oldsmobile, Pontiac and Cadillac, which also run until April 30. GM stayed put on its own incentive programs last week.

On March 31, Chrysler announced it will end its low-APR financing and cash rebate incentives April 10. The incentives cover most of its car and trucks. The program did not have an expiration date when Chrysler sweetened its incentives in February.

Chrysler, however, will continue to offer 72-month loans on the standard-sized and stretched versions of its minivans beyond April 10.

On April 1, AMC said it would extend and enhance its cut-rate loan or rebate incentive program on Alliances and selected Jeeps. The program, which was to end March 31, requires a $200 dealer participation on the Alliance cash rebate.

French automaker Peugeot joined domestic automakers in offering cut-rate financing on 1987 models. Peugeot began offering loans between 3.9 percent and 7.9 percent on all 1987 models on April 1. The program ends June 30. Dealer participation is required and a Peugeot spokesman said the average cost to the dealer will be $340 per car.

Peugeot is continuing to offer dealer incentives of up to $2,000 per car on 1986 models sold at retail.

The Ford program, which does not require dealer participation, provides for 3.9 APR financing up to 24 months, 5.9 APR up to 36 months, 6.9 APR up to 48 months and 9.9 APR up to 60 months. Buyers can opt for cash rebates instead of low financing on 1986 and 1987 models of Taurus/Sable ($400), Ranger ($500) and Bronco II ($600).

Previous programs that offered both low APR financing and rebates required dealer participation.

The Chrysler plan, which does not require dealer participation, offers cut-rate financing and cash rebates. The finance plan includes 3.7 APR on 24-month loans, 5.9 APR on 36-month loans, 6.9 APR on 48-month loans and 9.9 on 60-month paper.

The optional cash rebate program provides $1,000 for 1986 and 1987 models of Chrysler Fifth Avenue and New Yorker; $1,500 on 1986 and 1987 Dodge Lancer ES and Chrysler LeBaron GTS Premium models; and $500 on 1986 and 1987 Dodge 600, Chrysler LeBaron, Dodge Lancer and Chrysler LeBaron GTS models. Buyers may choose either the rebate or APR program.

The 1987 LeBaron coupe model is not included in the incentive program.

Buyers of the imported 1986 and 1987 Conquest and Colt Vista models, 1987 Dodge and Plymouth Colt DL and Premier models with value packages, and Colt E models can receive a $300 rebate or APR program.

Chrysler is giving both APR financing and cash incentives on some of its models. The automaker is offering $500 on Dodge Daytona and Chrysler Laser models purchased with low-rate financing and $900 cash without financing. Buyers can receive $600 on 1986 and 1987 Dodge Aries and Plymouth Reliant models purchased with low APR or $900 without. Also, Chrysler is giving $500 with the purchase of a 1986 or 1987 Dodge Charger or Plymouth Turismo with the low-APR financing and $800 for buyers who don't take the financing package.

On trucks, Chrysler is offering a $300 rebate on its Dakota (excluding the S model), $500 on 1986 and 1987 Ram 50 and Power Ram pickups, and $1,000 on 1986 and 1987 Dodge Ramcharger sport utility vehicles. Buyers may choose between rebates or the APR program. Standard-sized Dodge pickup trucks give $500 cash rebates with financing and $1,000 without.

AMC is continuing to offer $500 cash rebates or cut-rate financing programs on leftover 1986 and 1987 Alliance, Encore and GTA models. The previous program, which is no longer in effect, offered a $500 rebate or a choice of either free air conditioning or automatic transmission.

Incentives on Jeeps include $700 rebates on two-door Cherokees and $500 on four-door Cherokees and Wagoneers. Buyers of those two models may opt for the APR program instead of the rebate. The previous program did not include those models under the APR program.

Also, buyers will receive a $700 rebate on 4wd Comanche longbed pickup trucks and $500 rebate on 2wd versions. Buyers can opt for the rebate or the APR program on those vehicles. The previous program did not include the 2wd longbed model.

Incentives on Wrangler models will continue to include a choice between a six-cylinder engine and power steering at no charge or a $500 rebate.

AMC is offering 2.9 APR on loans up to 24 months, 6.9 APR on loans up to 36 months, 8.9 APR on loans up to 48 months and 9.9 APR on 60 months.

No dealer participation is required on the financing program at AMC.

Cadillac said it is offering 3.9 percent/24-month loans to 9.9 percent/60-month loans on 1986 and 1987 Cimarron models ordered from dealer stock between March 20 and April 30. No dealer participation is required.

Lane says incentives 'are probably here to stay'

WASHINGTON — Incentives in one form or another are likely to remain in place throughout the balance of the 1987 model year, according to William W. Lane, Oldsmobile general manager.

Lane said incentives "are probably here to stay" and added, "You'll be seeing more incentives from imports" as well.

Of the current market, Lane said, "It's a good strong market. However, with more competition, it's difficult to say what is normal versus what was normal a couple of years ago."

— Matt DeLorenzo

Renault's Alpine eyed by Chrysler

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

A top Chrysler Corp. executive hinted that the Renault Alpine — contrary to persistent rumors — could survive Chrysler's takeover of American Motors.

Chrysler Motors Chairman Gerald Greenwald, speaking to senior money managers and economists in New York last week, indicated that Chrysler may be leaning toward importing and marketing the Alpine if the proposed AMC acquisition is successful.

Greenwald described the proposed Chrysler/AMC marriage as a "win-win deal all around."

"If the AMC deal goes through, Chrysler will get exclusive access to three Renault-designed products — the Premier, the Medallion and the Alpine," Greenwald said at the Morgan Stanley Global Automotive Seminar.

Greenwald's comment indicates Chrysler may be leaning toward continuing AMC's plan to import the two-seat, mid-engine Alpine sports car from Renault. AMC had planned to import the car this fall.

Two-seat, mid-engine Alpine

However, an AMC spokesman said the Alpine program has been placed on hold at AMC because of uncertainty about the car's future raised in documents filed with the Securities and Exchange Commission.

In France, inside sources expressed serious doubt that the Alpine would be imported after the buyout. The Alpine was headed for the United States as a Renault flagship and to keep French Renault workers' jobs, they reasoned. Neither factor would be an impetus to Chrysler, they said.

Documents filed last month with the SEC relating to the proposed buyout of AMC by Chrysler have detailed some product plans. Chrysler will continue AMC's plan to manufacture the mid-size Renault Premier and import the compact Renault Medallion, according to the documents.

However, the documents state only that the Alpine program will be reviewed by Renault and Chrysler.

Sources in France at the time the proposed acquisition was announced suggested the Alpine program might be vulnerable. Chrysler plans to introduce a limited-volume Chrysler TC coupe by Maserati as a 1988 model in the same $30,000 price range that was anticipated for the Alpine.

The Alpine, which is produced at Renault's plant in Dieppe, France, was planned as a 1988 model.

AMC President Joseph Cappy has said in the past that the Alpine was designed as a "flagship" model, expected to "help the Renault brand by getting consumer recognition and establishing top-of-the-line awareness."

In other developments related to the proposed buyout, Chrysler is scheduled to complete its "due diligence" investigation of AMC by Thursday, April 9, according to the SEC documents.

Chrysler and AMC have shared information on future product plans, manufacturing, marketing strategies and financial commitments as part of the investigatory process, sources said.

The customary review in such takeover attempts is covered by a confidentiality agreement regarding "all non-public information furnished," according to the SEC filings.

Frederick W. Zuckerman, Chrysler treasurer, compared the due diligence process to buying a used car and taking it to a mechanic for a diagnostic test.

According to SEC filings, the investigation is scheduled to be completed prior to April 9. That deadline could be extended until April 23 if Chrysler "discovers an unforeseen problem" during the investigation, according to the filings.

Chrysler and the French automaker Renault announced March 9 a letter of intent outlining Chrysler's plan to acquire Renault's 46.1 percent stake in AMC.

10Ks list spending plans, suits at GM, Ford, AMC

By Michelle Krebs and Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTERS

American Motors executives saw bigger paychecks in 1986 but still received no bonuses, according to the 10K report filed with the Securities and Exchange Commission last week.

Compensation figures were not included in the 10K filings made by General Motors and Ford Motor Co. last week, but other spending plans and damage estimates from anticipated court cases were included.

Pierre Semerena, a Renault executive who became AMC chairman Jan. 15, 1986, received $310,195 in compensation in 1986. The 10K report also showed that AMC keeps a Manhattan apartment for Semerena, spending $60,077 in 1986.

The filings said that Semerena was given a three-year employment contract with an annual base salary of $200,000. He received more than the base salary in 1986 to offset the fact that Semerena will have to pay taxes in two countries.

Joseph E. Cappy, who replaced Jose Dedeurwaerder as president and chief executive officer March 21, 1986, received $304,635 in cash and deferred compensation. In 1985, Cappy, then executive vice president, received $222,148. Dedeurwaerder, a Renault executive, became AMC vice chairman.

John P. Tierney, vice president and chief financial officer, received $205,459 in cash and deferred compensation. Francoise J. Castaing, group vice president, received $201,175, up from $149,425 in 1985. Jesus Peon, vice president, received $206,495.

As a group, AMC's 19 executive officers received $3,491,115 in cash and deferred compensation. No bonus awards were made in 1986.

Paul Tippett, former AMC chairman who stepped down from the post in December 1985, received $225,000 from AMC in 1986. Tippett had an employment agreement with AMC that provides him with 50 percent of his original monthly base salary for his lifetime.

The SEC filings also showed that the potential lawsuit liabilities from Jeep C-J roll-over accidents has declined from a year ago because some cases have been closed and fewer are being filed. The estimate for damages from the cases was put at $1.4 billion, down from an estimated $1.8 billion at year-end 1985.

The filings revealed that AMC spent $69.7 million on research and development, up from $45.0 million and $48.6 million in 1985 and 1984, respectively. Capital expenditures were forecast to be about $750 million in 1987 and 1988.

GENERAL MOTORS: General Motors' 10K report did not list the salaries of the automaker's top five executives; that will be shown in the proxy statement due out later this month.

The 10K showed, as did the annual report released last month, that GM has reserved $169 million for executive bonuses. That is down from $219 million awarded in 1985. Performance Achievement awards for 1986 will total $9 million, compared with $22 million in 1985 and $33 million in 1984.

At the same time, GM said U.S. profits fell short by $1.5 billion for the profit sharing formula to kick in. GM's hourly workers receive no profit sharing for 1986.

GM's filings with the SEC show that 15 lawsuits have been filed in state and federal courts from Dec. 4, 1986 to Feb. 13 challenging the $700 million buyout of Electronic Data Systems founder and former GM director, H. Ross Perot, and former EDS executives Morton H. Meyerson, J. Thomas Walter Jr.

Quality still a major problem for U.S. firms, survey finds

Executives place blame on management actions

BURLINGTON, Mass. — Despite an awareness of the need to improve the quality of American products and services, a survey of senior executives found that higher quality is still eluding American companies.

The survey found that some 90 percent of the executives believe that poor management execution — not lack of awareness of the need to address quality issues — is the biggest problem related to improving quality today.

Moreover, more than three-quarters of the executives polled agreed that "the typical rank-and-file worker would like to be associated with a quality product, but doesn't know how to make it happen."

Organizational Dynamics Inc., a management consulting and training firm specializing in quality and productivity improvement systems, sponsored the survey to gauge quality improvement efforts in American corporations.

ODI said the survey was based on in-depth telephone interviews with top-level executives of the largest companies in the country. Forty-eight of the senior managers were employed by industrial corporations, the other 53 at service firms.

"These business leaders apparently realize that 'quality' is much more than a buzzword," said George H. Labovitz, president and founder of ODI. "They clearly recognize quality as critical to the success of their companies. Translating this awareness into measurable quality improvements presents great challenges for management."

Thirty-six percent of the executives pointed to some aspect of human nature — especially resistance to change — as the biggest barrier to implementing new systems to improve quality.

Other frequently cited obstacles were closely related to that "human element:" 15 percent said gaining management commitment was the most troublesome obstacle, and 14 percent cited communications problems, that is, "getting the word out within the company."

Fifty-nine percent of the executives said management — not employees — is primarily to blame for quality problems. And 87 percent agreed that managers are generally "too focused on short-term goals" that may compete with, and hinder, quality improvement efforts.

Almost all (95 percent) of the executives surveyed said that workers who were better at dealing with quality problems as they occur "would go a long way toward eliminating quality deficiencies in the company."

In practice, however, only about one-third of the executives said that rank-and-file workers in their organization were allowed "to make decisions and implement changes regarding problems that arise in their work." Underscoring the point, 58 percent said that workers "must consult with supervisors" before taking any such actions.

Commenting on the implications of the survey results, Labovitz said: "The answer is not 'management by democracy.' Managers must still call the shots.

"But the fact is, most quality problems have nothing to do with employees doing things wrong and everything to do with the systems management creates . . . systems that often block employees from doing their jobs right."

Labovitz said, "We find that most managers are comfortable with providing quality improvement skills to employees. Giving them more of a voice in decision making is a greater challenge. Managers must allow employees more meaningful participation if they expect to see results."

Auction news

• Golden Gate Auto Auction, Fremont, Calif., will host Anniversary Sale '87 on April 21-22. Last year, 1,500 vehicles were sold during the anniversary sale, making it Golden Gate's best sales week.

• Nick Snow has been promoted to vice president of operations of Anglo American Auto Auction Inc. For two years, he had been president and general manager of Nashville Auto Auction, Nashville, Tenn., one of Anglo American's 12 auto auction subsidiaries. Frederich H. Walther has been named to replace Snow. He formerly was assistant general manger of the auction.

• Sixty-five students graduated recently from Mendenhall School of Auctioneering, High Point, N.C.

Clanton's: GM Auction of the Year
J.C. Clanton, left, and Ray Clanton, right, of Clanton's Auto Auction Inc., Darlington, S.C., accept the 1986 GM Auction of the Year award from Paul Dupont, administrator, General Motors Auction Department. GM conducts auto auctions for GM dealers at 24 locations across the United States.

AUCTION DATES

American Motors

April 7 — D-A Auto Auction, New Stanton, Pa.

April 8 — Minneapolis Auto Auction, Plymouth, Minn.

April 9 — Corry Auto Auction, Corry, Pa.

April 10 — St. Louis Auto Auction, Bridgeton, Mo.

April 14 — Aptco Auto Auction, Taylor, Mich., and Statesville Auto Auction, Statesville, N.C.

April 15 — Columbus Fair Auto Auction, Columbus, Ohio; Metro Milwaukee Auto Auction, Caledonia, Wis.; and Kansas City Auto Auction, Kansas City, Mo.

Chrysler Corp.

April 7 — Hatfield Auto Auction, Hatfield, Pa.; Florida Auto Auction of Orlando, Ocoee, Fla.; Aptco Auto Auction, Taylor, Mich.; NuCarPrep System, Santa Fe Springs, Calif.; and Dallas Auto Auction, Grand Prairie, Texas

April 8 — A.D.E. of Alabama, Boaz, Ala.; Columbus Fair Auto Auction, Obetz, Ohio; South Seattle Auto Auction, Kent, Wash.; and Southern Auto Auction, Warehouse Point, Conn.

April 9 — Fredricksburg Auto Auction, Fredericksburg, Va.

April 10 — St. Louis Auto Auction, Bridgeton, Mo.

Ford Motor Co.

April 8 — Atlanta Auto Auction, Red Oak, Ga.; Concord Auto Auction, Acton, Mass.; Salt Lake Auto Auction, Salt Lake City; Southern California Auto Auction, Fontana, Calif.

April 9 — Arena Auto Auction, Chicago; Dallas Auto Auction, Dallas; and Southwest Auto Auction, Phoenix, Ariz.

April 15 — Lakeland Auto Auction, Lakeland, Fla.

April 16 — Aptco Auto Auction, Taylor, Mich.; Denver Auto Auction, Englewood, Colo.; Skyline Auto Exchange, Fairfield, N.J.; and 166 Auto Auction, Springfield, Mo.

April 21 — South Seattle Auto Auction, Kent, Wash.

April 22 — Columbus Fair Auto Auction, Obetz, Ohio; Clanton's Auto Auction, Darlington, S.C.; and Southern California Auto Auction, Fontana, Calif.

April 23 — Baltimore-Washington Auto Exchange, Baltimore; Houston Predelivery Center, Houston; and St. Louis Auto Auction, Bridgeton, Mo.

April 24 — Interstate Auto Auction, Mercer, Pa.

April 28 — Harrisonburg Auto Auction, Harrisonburg, Va., and Indianapolis Auto Auction, Indianapolis

General Motors

April 7 — Denver Auto Auction, Englewood, Colo.

April 8 — Hatfield Auto Auction, Hatfield, Pa.; Indianapolis Auto Auction, Indianapolis; Metro Auto Auction, Kansas City, Mo.; Northstar Auto Auction, Shakopee, Minn.; and Golden Gate Auto Auction, Fremont, Calif.

PRODUCTION

Car output edges up to 167,209 for week

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled production of 167,209 cars was 1.83 percent more than the previous week's 164,212 and 22.85 percent more than the year-ago week's 136,104, which reflected the Easter holiday.

So far this year, 2,177,404 cars have been assembled, 3.34 percent below the 2,252,611 completed last year at this point.

Companies split last week's targeted build as follows: General Motors, 51.83 percent; Ford Motor Co., 25.90 percent; Chrysler Motors, 12.08 percent; Honda of America Manufacturing Inc., 4.37 percent; New United Motor Manufacturing Inc., 2.39 percent; Nissan Motor Manufacturing Co., U.S.A., 1.77 percent; Volkswagen of America, 1.20 percent; and American Motors, 0.46 percent.

AMC's Kenosha, Wis., plant was closed last week (March 30) for inventory adjustment. The plant was expected to resume production today (April 6).

GM has closed five plants and most of a sixth this week (see story on this page for details). The closings will cost the company about 22,000 cars.

GM slated Saturday (April 4) overtime at its Lansing (No. 1) plant.

Ford scheduled Saturday overtime at its Dearborn, Mich., plant.

All Ford car plants are slated for daily overtime this week (April 6).

Chrysler's Sterling Heights, Mich., plant was scheduled for Saturday overtime. The plant is slated for daily overtime this week.

Millionth truck of '87 built

U.S. truckmakers built their one-millionth vehicle of the year last Thursday (April 2), nine days ahead of 1986.

Year-to-date, 1,018,538 units have been produced, 7.98 percent more than the 943,248 assembled last year at this point.

Last week's estimated truck production totaled 79,302 units, 2.10 percent more than the previous week's 77,671 and 35.72 percent more than the year-ago week's 58,431. The year-ago week's production reflected the Easter holiday.

General Motors slated Saturday (April 4) overtime at four plants: Baltimore; Detroit; Lordstown, Ohio; and Pontiac, Mich.

Ford Motor Co. scheduled no Saturday overtime. However, all Ford truck plants are slated for daily overtime this week (April 6).

Canada production steady

Last week's targeted Canadian auto production of 17,338 was 0.58 percent below the prior week's 17,439 and 31.27 percent below the year-ago week's 25,228.

So far this year, 241,172 cars have been assembled, 18.27 percent below the 295,087 completed last year at this point.

Truck production in Canada totaled 18,844 units, 1.84 percent more than the previous week's 18,503 and 4.58 percent more than the year-ago week's 18,019.

Year-to-date, 220,693 trucks have been built, 12.79 percent less than the 253,056 assembled last year at this time.

General Motors' Oshawa, Ontario, (No. 1) plant is down this week (April 6) for inventory adjustment. The plant is expected to resume output April 13.

The Oldsmobile Cutlass Ciera and Pontiac 6000 models are built at that plant.

GM closes six plants to cut stocks

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has closed five plants and most of a sixth this week and will close another one the week of April 13. About 28,000 workers will be idled by the shutdowns, which are expected to last one week.

Sluggish sales and swollen inventory of several GM car lines are responsible for the shutdowns. It is GM's largest temporary layoff this year. In January, six plants were closed to adjust inventory and one plant was idled for installation of paint equipment.

Production of about 22,000 cars will be lost by the newly announced plant closings for this week.

Two other assembly plants remain idle this week. The Fiero plant in Pontiac Mich., is in the second week of a two-week shutdown because of high inventories. Fiero output had been running about 1,200 a week. The Lakewood, Ga., plant is down for model changeover until mid-May.

GM has trimmed 100,000 cars from its second-quarter production schedule (Automotive News, March 30) to control its high inventory. However, industry analysts believe there will be even more plant closings at GM before the end of the second quarter.

All assembly operations except Cadillac Allante are down this week at the Detroit-Hamtramck plant. Other assembly plants beginning a one-week shutdown today are: Pontiac, Mich.; Wentzville, Mo.; Tarrytown, N.Y.; Oklahoma City; and Oshawa, Ontario. The body assembly plant in Flint, Mich., also is closed this week.

The Oklahoma City assembly plant will be down the week of April 13.

These are the car lines affected by this week's new shutdowns: Pontiac 6000; Buick Regal, Century, Electra and Riviera; Oldsmobile Cutlass Supreme, Cutlass Ciera, 88, 98 and Toronado; and Cadillac Eldorado and Seville.

The Oklahoma City plant, which will be down next week, assembles Chevrolet Celebrity and Buick Century.

Nissan builds 500,000th in Tennessee

Nissan Motor Manufacturing Corp. U.S.A. employee Greg Sells tests the Nissan Sentra that he won. The car is the 500,000th vehicle manufactured at the Smyrna, Tenn., plant since it bagan producing pickup trucks in 1983. Tennessee Gov. Ned McWherter, center, and Nissan President Marvin T. Runyon look on. The plant's first Sentra, built on March 26, 1985, was presented to the governor for display by the state.

Dacia rights apparently go to N.Y. firm

Roman Motors still claims import deal

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

The Romanian government apparently has chosen a New York firm over Roman Motors Corp. of Miami to certify, import and market Dacia sedans, station wagons and pickups in the United States.

North American Import/Export Co. of New Paltz, N.Y., was named "our only official agent and representative in the United States for importation, distribution, sales and service" in documents signed April 3 in Romania by Ion Stamatescu, managing director of the Auto Dacia Foreign Trade Co.

It was not immediately clear what the effect would be on the approximately 70 dealers signed by Roman Motors, many of whom paid that company up to $59,900 for parts, signs and tools and signed backup letters of credit for $500,000.

Roman Motors President John E. Trotman said he did not believe North American's authorization had the seal of the Romanian Council of Ministers in Bucharest and that the situation would be clarified in meetings in Romania this week.

But a high Romanian official in the U.S. confirmed the agreement between Auto Dacia and North American. Trotman termed that confirmation a "last ditch" effort by Romanian diplomats in the U.S. to save themselves. But Trotman added that if he were proven wrong and the North American appointment legitimate, "We'll do what we have to do."

U.S. woes pile up for Japanese; yen, prices, dealer stocks climb

By John K. Teahen Jr. and Arthur Flax
AUTOMOTVE NEWS STAFF REPORTERS

The formula is simple: The Japanese yen skyrockets against the dollar, Japanese manufacturers raise prices to adjust, buyers act more slowly — especially in the wake of $2,000-plus price hikes — and supplies of Japanese-built cars rise.

In a nutshell, that's what's happening to Japanese manufacturers in the U.S. market right now — while some even brace for the shock of shocks, that they might not be able to sell their shares of the 2.3 million planned Japanese imports.

The story begins in the late summer of 1985, when the yen began its steady appreciation against the dollar. Since then, prices have been raised six times on the leading makes of Japanese cars.

Last week, the yen closed at 142 to the dollar on the foreign-exchange charts. It broke the 150 barrier on March 23, just three days after Toyota posted its latest U.S. price hike. Nissan acted 11 days later, when the rate was 146. Honda was the first of the Big Three to hike prices this time, but the yen was at 153 when it announced its Feb. 27 boost.

Since September 1985, the yen has risen about 65 percent against the dollar, moving from an exchange rate of 235-240 to the current 142.

And, as prices have gone up, sales — as reflected in the days' supplies of Japanese cars — have slowed. In fact, they have slowed so much that some Japanese manufacturers question whether all Japanese makers will even sell their shares of the current 2.3 million imports from Japan. Particularly vulnerable would be smaller companies such as Mitsubishi, Subaru, Isuzu and Suzuki.

The effects are being felt from corporate headquarters in Japan, where profits are down precipitously, to the showroom floor.

Some dealers say higher prices have hurt sales and profits; others haven't had any real problems with the higher stickers.

Dan Slattery, general sales manager at Bill Page Toyota in Falls Church, Va., said car sales are quite strong although sales of the Cressida, Toyota's highest-priced sedan, are lagging slightly.

see JAPANESE, page 70

Older cars live on; alter Chrysler plan

By Mary Connelly and Al Fleming
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Chrysler Motors will continue assembly of K- and E-body cars at its Jefferson Avenue plant through the 1988 model year and likely until construction of an all-new plant is completed in 1991.

The plant had been expected to produce trucks between 1988 and 1991, but that plan has been shelved, according to company sources.

The move to continue producing K- and E-body models brings to four the number of Chrysler body styles that were scheduled to be discontinued but will now remain in dealer showrooms in the 1988 model year.

Chrysler has also said it will continue the L-body Chrysler Omni America and Plymouth Horizon America, which had been scheduled to end with the 1987 model year.

In addition, in 1986 the company reversed its decision to end production of its large M-body Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury models and took the unprecedented step of subcontracting assembly with American Motors, the automaker it is now poised to take over with the purchase of Renault's holdings in AMC stock.

The rescued 10 models in four body styles accounted for 58.44 percent of Chrysler's total passenger car sales in the United States in 1986 and 52.06 percent in the first quarter of 1987. And, because tooling and development costs for those products already have been amortized and incremental unit profits are higher, Automotive News estimates that as much as $750 million of Chrysler Motors' $1.1 billion 1986 profit came from those 10 models.

The 10 models are the L-bodies, Dodge Omni America and Plymouth Horizon America; the K-bodies, Plymouth Reliant and Dodge Aries; the E-bodies, Dodge 600, Plymouth Caravelle and Chrysler New Yorker; the M-bodies, Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury.

GM25: *Will car buyers believe Corsica, Beretta symbolize GM's commitment to quality?*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet has called the Corsica and Beretta its most important cars since 1955, but the cars are even more important to General Motors for reasons far beyond the machines themselves.

For the corporation, the cars symbolize the new GM as the first major products since GM's reorganization began in January 1984.

The cars are GM's attempt to convince the public of the automaker's commitment to quality and its willingness to respond to customer demands. They also are the hub of a GM campaign to increase sales of North American cars in Europe (story on Page 69).

"When we reorganized North American car operations, we did it to make better quality decisions and to get to the marketplace in a shorter time," said GM President F. James McDonald.

"Coming out of the chute, these vehicles have met their quality objectives and capital objectives."

Robert Schultz, GM vice president and group executive of the Chevrolet-Pontiac-Canada Group, said the cars met their objectives.

"Field stocks that Chevy needed for announcement day were on time," he said. "The quality of the cars met all of our goals."

Chevrolet dealers contacted agreed the Corsica and Beretta have met their objectives. Dealers said the launch of the cars has been the most successful since the introduction of the Citation in 1979. By the official introduction day (March 12), dealers had ordered 125,000 cars. Retail sales as of March 31 were 12,458.

McDonald said the GM reorganization was a traumatic change for nearly everyone in GM. Thousands of people were moved around to new jobs. The engineering departments were reduced from six in the car divisions to two in the car groups. Product engineers and process engineers were put together in the same room to simultaneously engineer the car and engineer the process to build the car.

Machine vision system inspects the car body

Greenwald, Mercer to open World Congress

DETROIT — Two executives who gained renown by helping their companies survive near-disastrous crises will keynote the 12th Annual Automotive News World Congress, to be held at the Hyatt Regency Hotel in Dearborn, Mich., July 26-29.

Delivering the State of the Industry address on Sunday evening, July 26, will be Gerald Greenwald, chairman of Chrysler Motors.

He played a major role in Chrysler's comeback from financial calamity in the 1980s, and currently is one of the chief strategists in the corporation's proposed acquisition of American Motors.

Greenwald's co-speaker at this year's opening session will be Ro-

Audi doubles ad budget in recovery try

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Audi of America will double its advertising budget over the next 12 months as it continues its counterattack against the damaging publicity surrounding the Audi 5000.

The company will also drop the Audi 4000 and Audi 5000 names on future editions of those models, Volkswagen of America Vice President John Damoose, who heads the Audi operations, said last week. Though that move had been planned before the company's current troubles began, it could further distance Audi from the sudden-acceleration problems surrounding the Audi 5000-S.

The Center for Auto Safety and other groups have charged that seven deaths and hundreds of injuries have resulted when Audi 5000s with automatic transmissions accelerated uncontrollabiy after being shifted from park into drive or reverse. Damoose, saying the Audi is "the safest car in the world," told the Detroit Auto Writers Group that a shift-lock device, standard on all 1987 models, will substantially reduce the acceleration incidents.

The marketing measures are part of Audi's ongoing effort to restore confidence in the Audi name and boost sales. The first significant step — a $5,000 rebate offer on a 1987 Audi to current owners and lessees of late-model Audis — was designed to "stop the bleeding," said Damoose, who left Chrysler Corp. in November to head Audi. Sales of all Audi models in the United States slipped 19 percent in 1986 [illegible] are down about 6,000 units through the first quarter of 1987.

Incentives are likely to be offered on Audi models other than the 5000 for some time to come, Damoose predicted. They will be part of a marketing effort to turn the company around.

"We are about to launch a whole series of programs," Damoose said. "It's going to take a lot of money to do that. It's a business crisis of the first order."

The early steps have been aimed at those who know Audi best — its current customers. In addition to the rebate offer, which lasts 90 days, Audi plans to send a videotape demonstrating the car's safety to the estimated 2,500 Audi 5,000 owners.

And in July, it will launch an unprecedented ad campaign focusing on the cars' technological and safety features. Damoose would not specify how much the program will cost, but Advertising Age estimates the outlay at $80 million.

Damoose said most of the record outlay will be borne by Audi's German parent, Volkswagen AG.

AUTOMOTIVE NEWS/JOE WILSSENS

VWoA Vice President John Damoose

That campaign will tie into this fall's planned launch of the Audi 4000 replacement, which will be known as the Audi 80 and Audi 90. The all-new car, which Damoose said has been highly successful in Europe, will be upscale from the current Audi 4000. Eight to 10 months after introduction, Audi will add a coupe version of the car to its U.S. lineup, he said.

In mid-1988 Audi will upgrade the 5000 model and rename it, probably using the Audi 100 and Audi 200 names used in Europe, Damoose said. He confirmed the new 200-based Quattro will be offered with the V-8 being developed by Audi. "We're going to start to really market the Quattro," he said.

Many of the ideas for the current marketing campaign have come from a group of Audi officials and five select dealers who meet at least twice monthly to develop programs aimed at Audi's revival. Initial response to the $5,000 rebates has been positive, Damoose said.

Damoose explained the sudden acceleration incidents as: floor mats that have interfered with the accelerator; the position of the brake pedals and the accelerator; the idle-speed stabilizer; and drivers hitting the wrong pedal.

The company has issued a series of recalls to correct those problems and has designed the changes into new models. The shift-lock device, which requires the brake to be depressed before the car can be put into gear, "seems to be reduce the problem substantially," Damoose said.

He called sudden acceleration an industry-wide problem that has afflicted Audi more than any other carmaker.

He predicted that if the company's recovery is successful, U.S. sales could reach the 100,000 level in three or four years. Audi sold 74,061 cars in 1985.

Illinois asks all states to help in Audi matter

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Neil F. Hartigan, attorney general for Illinois, has sent a letter to all state attorneys general, asking them to join Illinois in seeking a nationwide solution to alleged sudden-acceleration problems of Audi 5000s.

Hartigan's representatives said response from the other state attorneys general has been "substantial," but they declined to say how many or what kinds of responses they have received.

The letter suggests:

- "Promoting public dialogue and awareness through a public hearing mechanism."
- "Litigation such as a mandamus action against NHTSA to force that agency to correctly implement vehicle defect notification procedures . . . and/or to issue a mandatory safety recall order to the manufacturer."
- Or an "injunction and restitution action against the manufacturer on behalf of the state and consumers."

The letter from Hartigan noted that an existing suit is similar to the last option. It was filed in Chicago's Cook County Court on behalf of individual owners of Audi 5000s and a leasing company, and seeks damages for the loss in resale value of Audi 5000s.

Audi of America said it was surprised by Hartigan's letter — it had not seen a final draft — and called it unwarranted. "We are continuing our ongoing dialogue with him, and we have agreed to meet with Mr. Hartigan and his representatives to discuss the concerns outlined in his letter," the company said in a prepared statement.

Hartigan told his fellow state legal officers that of the 250,000-plus Audi 5000s sold to date, about one in every 180 has experienced unwanted acceleration and that he and the consumer group Center for Auto Safety consider "inadequate" Audi's actions so far.

Hartigan said Audi's fix, which automatically applies the brake when shifting, "presumes that drivers have not already been depressing the brake pedal before shifting."

Audi also suggested inspection of the idle stabilization valve in its recall notice. It said that of the cars equipped with the shift-lock device, the complaint rate has been one in 7,500 cars. It also said the installation rate for the devices is running about 80 percent, and that should make its recall one of the most widely implemented.

Hartigan's letter said the Audi voluntary notice to 5000-model owners does not meet the regulatory requirements of an official defect notification letter. Audi of America disputes this, saying its statutory recall was announced Jan. 15, 1987. Official recall letters must clearly state that the car is being recalled for a safety defect.

Hartigan's letter said that NHTSA's failure to order Audi to send an official defect notification letter is "shocking." He claimed NHTSA has the legal authority to grant Illinois' petition to force Audi to repurchase 5000s.

On Dec. 9, NHTSA Administrator Diane Steed wrote to Hartigan, saying that NHTSA could not force a recall until it: makes an initial determination of a safety-related defect by finding the malfunction; allows an open comment period; holds a public hearing; then issues a final determination. If the manufacturer still refuses to recall, only then can NHTSA get the Justice Department to take the maker to court to force the recall, the Steed letter said.

Steed cited the General Motors X-car brake case, in which the Justice Department took GM to court in 1983 because of alleged brake lockup. However, in that instance, NHTSA actually skipped the final determination phase because it judged the X-cars so dangerous.

Hartigan's letter charged that under case law, NHTSA indeed has the legal authority to order a recall based on the incidence of defects alone — whether or not NHTSA can find out what is causing the sudden unintended acceleration. (NHTSA closed the books on other acceleration investigations when it could not find a cause.)

Hartigan cited a Dec. 16 letter he sent to Steed, saying that more than 800 reports of unwanted acceleration in Audis is more than enough. His letter said he finds NHTSA's "oppressively narrow reading" of the law "the more perplexing" because the Justice Department's case against GM regarding X-body brake lockup used the same performance defect argument.

Audi said it has lived up to both the spirit and letter of the law with its voluntary recall. "Audi has acted in a responsible manner and has voluntarily recalled all 1978 to 1986 Audi 5000s equipped with automatic transmissions. . . . We have made tremendous progress with our shift-lock installation, as already some 130,000 shift-locks have been installed to date, which has resulted in a dramatic drop in the rate of reported incidence of unintentional acceleration," the company said.

Buffalo Grove, Ill., is the site of the first death attributed to a "runaway" Audi 5000, and Hartigan has been active in working with the Center for Auto Safety and in urging NHTSA to force Audi to buy back cars.

NHTSA granted a petition by the Center for Auto Safety and the New York attorney general by opening an investigation into Audi 5000s equipped with automatic transmissions. On Aug. 5, it upgraded its investigation "and is continuing it on an expedited basis," Steed wrote to Hartigan. NHTSA also is monitoring Audi's voluntary recall.

Ford averts lawsuit by agreeing to modify Econolines

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Under threat of a lawsuit from the Virginia attorney general, Ford Motor Co. has agreed to modify nationwide all 1983 through 1987 Ford Econoline cutaway chassis and vans to relieve fuel system overpressurization.

The flaw was believed to cause fuel spurting and possible fires in a potential of 10,000 to 11,000 vehicles.

Virginia Attorney General Mary Sue Terry announced Ford will have repair kits available by May 15. Ford and ambulance makers will work with federal, state and local officials on maintenance and operating procedures for the affected vehicles. Ford will provide the parts and a limited number of Ford dealers will make the repairs; the ambulance makers will inspect the vehicles. A plan for the joint effort is due by April 24. Notification of owners and users will also be coordinated.

Ford Safety Director Robert H. Munson confirmed the plan. He added that Ford and the Ambulance Manufacturers Division of the National Truck Equipment Association plan to bring to the attention of regulatory officials their concern about excessive gasoline volatility in some areas of the country. Munson warned of the need to tighten volatility standards, particularly in warm-weather states.

In fact, it was Virginia's concern over coming warm weather that pushed Ford and the ambulance makers into setting its timetable. A senior official in Virginia's attorney general office confirmed that at a late-night meeting, Terry told Ford Vice President Helen O. Petrauskas that she had two versions of a speech for the next morning.

One was to announce a decision by Ford and the ambulance makers to recall in a timely fashion.

The other was that her office planned to sue Ford and the ambulance makers over the persistent problem of fires caused by fuel spurting or "excessive" idling.

The letter of agreement with Ford was signed at 9:30 p.m. April 7, and Terry made the recall announcement the following morning to the consumer protection seminar of the National Association of Attorneys General meeting in Richmond.

By coincidence, also on April 8, Virginia Gov. Gerald Baliles signed a bill enabling the state attorney general to act on behalf of local rescue squads — thus expanding her existing authority to take legal action on behalf of emergency medical operations owned or controlled by the state. This authority was sought by Terry because she believed certain localities were especially vulnerable to unsafe ambulances.

Last month, Terry had notified Ford of two recent incidents of ambulance fires in her state.

On April 7 — the same day Virginia was negotiating with Ford over allegedly unsafe ambulances — Philip W. Davis, director of NHTSA's Office of Defects Investigation, wrote to Ford's safety director, Munson. He noted that reports of more than 150 fuel expulsions with three resultant fires warranted a recall, and that unless Ford agreed, a formal defect investigation with a public notice would be forthcoming.

The NHTSA letter said: "If the vehicle is built in stages, its final stage manufacturer would ordinarily be responsible for conducting the recall. If the vehicle is instead produced by altering a previously completed vehicle, the alterer

Fewer buyers in Class 8 field

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

GREENSBORO, N.C. — Volvo White marketing studies show that heavy-truck purchases are increasingly concentrated among fewer, higher-volume customers and that retail sales are similarly concentrated among higher-volume dealers.

Terry Young, Volvo White marketing director, said there were 14,000 fewer Class 8 customers in the 1980s than in the 1970s. That occurred despite the supposedly high number of new entrants into the market since deregulation of the industry in 1982.

Essentially, more sales are being concentrated among fewer buyers.

Volvo-White divided all the Class 8 vehicles retailed during 1979-85 among four groups of buyers and compared that to a similar market segmentation study for 1973-79.

For the first group, the study showed that the top one percent of the Class 8 buyers purchased an average of 1,515 units each during the 1979-85 period. That was up from an average of 925 units purchased by that same group during the 1973-79 period.

For the second buying group, the top 1.6 percent of the buyers purchased an average of 66 units each during the 1979-85 period. That compared with an average of 48 units during the earlier period.

Buyers in the third group averaged seven units compared with five during the 1973-79 period.

About 83.7 percent of truck purchasers were represented by the fourth group during 1979-85. That buying group averaged one truck purchase apiece.

During 1973-79, some 80.3 percent of buyers were represented by that bottom-quarter group. They also averaged one truck purchase apiece.

Volvo White officials pointed to sales trends in which more trucks would be bought by independent trucking companies and for-hire carriers and fewer by the private carrier segment. Sales to construction, mining, utility and sanitary services customers are expected to hold steady.

Company officials said that during 1980-85, independents accounted for an average of 20 percent of Class 8 truck purchases. In 1989-90, they believe that group will account for 22 percent of truck purchases.

Again, they expect the for-hire carriers, who accounted for an average 26 percent of Class 8 purchases during 1980-85, to account for an average 30 percent of purchases during 1989-90.

On the other hand, they see private carriers accounting for only 33 percent of Class 8 purchases in 1989-90, down from an average of 39 percent.

The construction and mining market segment will continue to account for 7 percent of Class 8 purchases and the utility and sanitary services segment for 8 percent, officials believe.

Volvo White had been moving toward a higher concentration of sales among fewer dealers even before its joint venture with General Motors.

Young said that 71 of the company's 194 dealers retailed more than 50 units last year, up from 62 dealers with that kind of volume in 1985 and only 19 in 1982.

The company had 20 such high-volume dealers in the Northeast, 17 in the Midwest, 16 in the Southeast, 11 in the West, and 7 in the Southwest.

The new Volvo GM Heavy Truck Corp. plans to have a 300-dealer network by January, 210 fewer dealers than the current combined total for GM and Volvo.

Barr chosen Dealer of Year

Barr, left, receives award from Business Week's Terry Sweeney

DALLAS — Richard S. Barr, a Navistar/Mercedes-Benz/Freightliner dealer from Maryland, won the 1987 Business Week/ATD Truck Dealer of the Year award.

Barr is president of Barr Transportation Center in Delmar, Md., and Barr International Inc. in Salisbury, Md.

Three other finalists honored as regional award winners were:

- C. Mack Moore, president of Preston Motors Inc., Kingswood, W.Va. (Midwest region). Moore is a Navistar dealer.
- C.E. (Gene) Allen, president and general manager of Carmenita Truck Center, Santa Fe Springs, Calif. (Western region). Allen is a Ford/Volvo White/Western Star/Hino dealer.
- Ben Bruckner Jr., president of Bruckner Truck Sales, Amarillo, Texas (Southern region). Bruckner is a Mack dealer.

Barr was the Eastern regional as well as national winner.

Barr told Automotive News that he would like to see greater efforts by dealers and manufacturers to resolve their differences.

He also considered it very important for manufacturers to listen more closely to dealers, particularly in product planning.

And he emphasized the difficulty of turning a profit.

"Truck dealers are an exceptional group of business people who can't afford the margin of error available to some other types of businesses," Barr noted.

"They spend a great deal of time and effort (running their franchises), and they are stepping up to meet a lot of very tough challenges, he added.

Barr, a frequent Navistar award winner, serves on the National Automobile Dealer Association and Navistar NADA 20 Group, the Mercedes-Benz Freightliner district dealer council and the Maryland Motor Truck Association.

Nissan includes domestically built units in Tennessee

Lessors see bonus in new tax law

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS, Nev. — Leasing companies are rubbing their hands in glee over the increased business they foresee from last year's Tax Reform Act.

David Burr, president and chief executive officer of Rollins Leasing Corp., Wilmington, Del., told the Truck Rental and Leasing Association convention here that many of his company's customers have expressed interest in long-term, full-service leasing. Those are customers who own vehicles and with whom Rollins has contract maintenance agreements.

Burr also predicted that full-service leasing firms would face less competition from a number of the "larger tax-oriented leasing companies."

Greyhound, for example, is trying to sell its tax-oriented leasing subsidiary.

Burr said other similar tax-oriented leasing firms — particularly smaller ones — would either curtail their operations or drop out of the business because of the new tax law.

Roger Colman, distribution control manager for Readi-Bake Inc., Grand Rapids, Mich., a lessee, said the new law has his company paying "particularly close attention" to the residual value of the vehicles it leases.

Readi-Bake leases 60 Class 8 over-the-road tractor trailers. It plans to replace about 10 to 20 units this year and, on a staggered basis, the entire 60 within the next year and a half.

Colman said, "We've always used cabover tractors. But with the new leases, we're going to switch to conventional tractors with setback axles.

"We did that mainly for driver comfort; but we're finding, as a side benefit, that conventionals have such a higher residual value and that we're actually going to benefit with a lower weekly rental than we've been paying for the past 4½ years on our old vehicles."

Readi-Bake has always been a lessee and plans to continue as such.

Colman noted that in the 1970s, with rising fuel costs, companies like his were much concerned about fuel economy.

Today, he said, entire fleets are averaging up to 6.5 to 7 mpg, indicating that the industry has done a good job of improving fuel efficiency.

Currently, his company is trying to improve the safety, effectiveness and efficiency of its drivers.

On its new tractors, it is specifying equipment like Jake brakes for safety and deluxe interiors — including air conditioning, air ride suspension and remote-control mirrors — to improve drivers' job performances.

Colman said he is looking to his lease companies and vendors for services and equipment to help cope with such future concerns as higher insurance costs and stiffer federal and state regulations.

William Slifkin, national marketing manager of vehicles for General Electric Credit Corp., Wilton, Conn., said the new Alternative Minimum Tax virtually precludes companies from completely avoiding federal income tax through standard deductions like accelerated depreciation.

Leasing will help to reduce potential AMT liability because:

- Lease rentals are not an AMT preference item, so they are not added as regular taxable income in calculating AMT income
- Since a company won't own its own equipment, there won't be any AMT preferences for accelerated depreciation or book income leasing arising from the leased equipment.

Burr called the new tax law a "nightmare and a headache. What it boils down to is that many, many U.S. companies — large corporations and small companies that run trucks — are now going to be subject to this AMT.

"That's going to cause them to pay taxes in the future when they had minimal taxes in the past. That creates a tremendous opportunity for us in the leasing business," he added.

Many companies "that had been in ownership before are now going to become lessees," he predicted.

"They're going to lease their equipment because they have one simple, direct expense for regular tax calculations, a direct expense from our lease bills, for minimum tax computations," he said. "And they don't have to go through all this recalculation of preference items as it relates to depreciation, if they had the equipment on their books."

His company is honing its sales force to promote a simplified customer presentation of why the law favors a switch to leasing.

"The AMT is the big point. You've got to get a simplified understanding of AMT and imbue salespeople in your own companies with it. That's not an easy thing to accomplish," Burr added.

The new tax law will affect "tax-oriented finance type" lessees, Burr said.

"We feel the tax-oriented leasing companies' rates will be higher in the future than in the past," he said. "And they will be offering less direct competition to us in the future. Under the new tax law, residual values are going to change. Some companies are going to have to take higher residual value risks under a tax-oriented lease."

"We think that will make them less competitive vs. a full-service lease. We think a number of companies have had unexpected problems with their tax leverage leases — their terms have been too long in some cases and the terms of their leases have gone beyond the useful operating life of the equipment," he said.

"We see a number of customers that used tax-leverage leasing in the past switching over to the operating leases where they get a full-service package from a full-service leasing company," Burr concluded.

Dealers' service, parts business rises in February

SERVICE INDEX
104.0*

	Feb., '87 vs. Feb., '86	2 mos., '87 vs. 2 mos., '86
Gross Profit on All Labor and P&A Sales	+5.6%	+2.0%
Repair Orders Written	−3.9%	−7.0%
Total Labor Sales (Customer & Warranty)	+8.1%	+4.3%
Shop Parts Sales (Customer & Warranty)	+ 2.1%	+0.7%
Sales of All P&A	+ 8.0%	+4.7%

*—Survey by Automotive News shows that dealers' service and parts business in February 1987 was 104.0 percent of business in February 1986. Service business in the first 2 months of 1987 was 100.9 percent of business in the corresponding period in 1986.

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The Automotive News Service Index showed that service and parts business at new-car dealers climbed 4.0 percent in February, compared with February 1986.

Shop business in January was down 1.7 percent from that of the same month a year ago.

In the first two months of 1987, shop business was up 0.9 percent over the first two months in 1986.

An eastern Chevrolet dealer said, "Service volume increased during February. The increase was due to direct-mail advertising to offset a normally slow period."

A western Buick dealer attributed increased business to a flat rate increase as well as "selling more work per repair order."

Although the overall service index was up, some dealers attributed declines in service business to a lagging regional economy and mild weather.

A northwestern Ford-L-M dealer said his service profits were down some 50 percent.

An Iowa Ford dealer said, "There was no apparent reason (for a decline in business) other than the general economic shape of Iowa."

All indicators except repair orders written were positive in February.

Total labor sales (customer paid and warranty) registered the biggest gain, up 8.1 percent over February 1986. Sales of all parts and accessories climbed 8.0 percent; gross profit on all labor, parts and accessory sales rose 5.6 percent; and shop parts sales (customer paid and warranty) increased 2.1 percent.

Repair orders written fell 3.9 percent.

Parts and accessory sales to off-premises customers rose 12.8 percent in February.

Sales of all parts and accessories, up 4.7 percent, showed the largest gain through the first two months of 1987.

Total labor sales increased 4.3 percent; gross profit on all labor, parts and accessory sales climbed 2.0 percent; and shop parts sales inched up 0.7 percent.

Repair orders written were off 7.0 percent.

Parts and accessory sales to off-premises customers were up 7.9 percent through February.

Chrysler eyes sale of MoTech training school

Chrysler Motors is expected to sell its MoTech Auto Education Center in Michigan. And in an apparently unrelated development, Chrysler Mexico plans to open a technician training facility near Mexico City.

The Mexican facility will train technicians for the Latin American market.

According to a Chrysler spokesman, the company will end its involvement with MoTech when the current training class at the Livonia, Mich., school ends in December.

A source said Chrysler is negotiating to sell the school to an outside firm. Training is expected to continue under the new owner.

A nonprofit subsidiary of Chrysler, MoTech has provided training in the latest automotive service technology since it was founded in 1973. The school has trained about 8,000 students.

A Chrysler spokesman said, "We want to direct our efforts to train dealer and Chrysler employees more specifically on Chrysler products."

MoTech currently offers training in auto mechanics and auto body repair. Approximately 400 people are now attending MoTech.

Chrysler Mexico, meanwhile, plans to open its new technical training center to trainees outside Mexico.

"We are planning to bring technicians from all over Latin America," said Victor Montalvo, Chrysler Mexico's service and training manager."

The center will train about 1,200 Mexican mechanics and technicians annually and 300 other Latin American mechanics, Montalvo said.

The center, in Naucalpan, just outside Mexico City, currently employs five instructors as well as center manager Ildefonso Gonzalez Montemayor, technical adviser Juan Vivar and two secretaries.

The Mexican company is seeking Chrysler Motors approval to hire five additional instructors to cope with the anticipated influx of students.

Elaborating on that need, Vivar said: "The automotive industry is installing so much sophisticated equipment that we feel we must keep up . . . .

"From the time the car was invented until about 10 years ago there were few changes, technically speaking. There's been a revolution and we have a responsibility to train people."

Inaugurated last month, it replaces the Chrysler training center in Mexico City, which was severely damaged by earthquakes that struck Mexico City in 1985.

Montalvo, a Chrysler employee for 32 years who has been in charge of service and training in Mexico since 1965, considers the new center the "most modern in Mexico and Latin America."

Chrysler Mexico has other training centers in Guadalajara and Monterrey. The company wants to open centers in Culiacan, Veracruz and Leon.

Sixty percent of the trainees are sent by Chrysler, Mexico's 142 distributors. The remaining portion come from a variety of organizations and institutions, including the army, the highway police and car rental companies.

Domestic new-car sales in Canada in March were up 8.59 percent over the total for the year-ago month.

Canadian dealers delivered 72,182 North American-built cars in March, compared to 66,470 in March 1986.

Truck sales totaled 35,282 in March, up 17.36 percent over 30,063 a year ago.

General Motors, Ford Motor Co. and Chrysler Motors continued to offer cash rebates and low interest rates on some vehicles. American Motors offered a longer warranty as the only incentive on its products.

Car sales for the first three months of the year were down 8.77 percent from the same period in 1986. The three-month total this year was 157,756 compared to 172,919 in 1986.

Four domestic carmakers showed increases in car sales over the year-ago month during March, and one was down. Honda, Canada's sixth automaker, began producing four-door Accord models in its Alliston, Ontario, plant in November 1986. It also began importing its Acura sedan and coupe to Canada in March. It sold 476 Canadian-built cars and 471 Acuras last month.

Ford posted the largest percentage gain in car sales. It sold 18,455 domestic cars last month, 10.83 percent more than the 16,651 sold in March 1986.

A Ford of Canada spokesman said the company offered cash rebates or cut-rate financing on 1987 Tempo, Topaz, Mustang and Tracer models and 1986 Lynx models. Low-rate financing on Ranger in the first half of the month was the only incentive on Ford trucks.

GM sold 37,255 cars, up 9.74 percent from the 33,946 sold in March 1986. GM offered cash-back incentives on Chevrolet Celebrity, Oldsmobile Cutlass Ciera, Pontiac 6000, Buick Century and other models, according to a GM of Canada spokesman.

Sales of North American-built Chrysler cars were up 2.6 percent in March, rising to 15,417 from 15,024 in March 1986. Chrysler offered cash-back incentives ranging from $500 to $1,500 on many of its cars and light-duty trucks.

AMC sales continued to fall in March. Renault sales dropped to 350 from 659 in March 1986. AMC Eagle sales totaled 40 vs. 36 in March 1986.

Volvo sold 768 cars in March compared to 622 in March 1986. It gave no breakout, but Automotive News estimated that this year's total included 189 Canadian-built cars.

March proved to be a strong month for domestic truck sales in Canada. AMC Jeep and Chrysler posted record truck sales last month.

GM truck sales in March rose 12.04 percent, going to 14,497 from 12,939 a year ago. Ford sold 11,896, up 14.51 percent from 10,388 a year ago. Chrysler reported 7,203 domestic-truck sales, up 28.55 percent over the 5,603 sold in March 1986. AMC sold 1,686 Jeeps in March, 48.80 percent more than the 1,133 sold in March 1986.

Sales of captive imports in Canada last month were as follows:

GM sold 1,166 Suzuki-built Firefly (Sprint) models and 99 Isuzu-built Sunburst (Spectrum) models. Ford sold 833 Mercury Tracers and 30 Merkur XR4Ti models. Chrysler sold 997 Mitsubishi cars, 197 Mitsubishi trucks and 70 Peugeot cars. AMC sold 381 imported Renault cars, including 96 Medallion units, which were introduced last month.

Honda sold 6,881 Japanese-built models in addition to the 476 built in Canada.

Japanese set fifth sales record at home

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Sales of Japanese-made vehicles in their home market reached a record 4.12 million units in the fiscal year ended March 31. It marked the fifth consecutive year the fiscal record has been broken.

The Japan Automobile Dealers Association said March's domestic-vehicle sales volume — 588,697 — eclipsed the previous record of 571,557 units set in March last year.

At the same time, Japan Automobile Importers Association figures show that demand for imported cars in March achieved the 39th year-to-year monthly increase with a record 9,495 sales.

March's domestic total brought domestic sales for the fiscal year to a record 4,120,596 units, an increase of 2.3 percent from the previous year's 4,028,132 units.

The dealer association attributed March's increase to sales drives by all manufacturers on the domestic front to compensate for the export slump caused by the yen's appreciation.

March domestic-car sales increased by 1.7 percent to 437,976 units. Sales of Japanese-built trucks climbed 6.9 percent to 146,880 units, and buses were up 3.9 percent to 3,841 units.

Meanwhile, the import association noted that March's import volume of 9,495 units was 40.2 percent above the 6,773 cars sold in the same month a year ago. It was sufficient to move ahead of the previous monthly import high of 7,729 set last December.

Cumulative sales of import cars during the first three months of calendar 1987 totaled 19,555 units, an increase of 39.8 percent over the 13,988 sold in the same period last year.

The association attributed the sharp rise in import car sales to dealers lowering prices due to the yen's appreciation, and to a reduction in interest on car loans.

March import sales figures include 3,574 regular-size cars (up 42.2 percent from last year's 2,513 units) and 5,921 compact cars (up 39.0 percent from the 4,260 sold last year).

West German cars took the lion's share of the the import sales in March with 7,322 units. BMW was top among the West German cars with 2,343 units, followed by Volkswagen with 2,309 and Mercedes-Benz with 1,719.

However, the biggest percentage gains were recorded by U.S.-built cars. Their increase was 112.3 percent to 450 units, compared with 212 the year before. Swedish sales jumped 69.0 percent to 419 units compared with 248 a year ago.

Landover Group to buy 2 SKF Industries' firms

KING OF PRUSSIA, Pa. — SKF Industries, a bearing manufacturer here, has agreed to sell its California-based Dura-Bond Bearing Co. and Eurasian Automotive Products units to the Landover Group, based in Radnor, Pa.

The Landover Group operates Hansa Products, Landover, Md., a regional distributor of imported auto parts. Hansa will retain its current management and will operate the former SKF firms separately.

Landover Eurasian Co. has been formed to operate Eurasian Automotive, a national imported parts distributor. Landover Dura-Bond Co. has been formed to operate Dura-Bond Bearing, which manufactures specialized engine parts.

Raymond B. Langton, president of the SKF automotive parts unit, said the sale of the two SKF operations reflects the company's desire to concentrate on its core business of manufacturing and marketing roller bearings for automotive, aerospace and industrial uses.

The sale is expected to be completed by mid-April.

Spring spurs domestic-car sales; late March brings 19% advance

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

The gardening, golf, professional baseball and other warm-weather seasons have started. And, by the looks of the figures, so has the budding of a spring upturn in the sales of U.S.-built autos.

Retail deliveries of new domestic and imported cars were depressed from year-earlier levels through the first quarter of 1987. Domestics, however, showed a burst of improvement in the closing 10 days of March.

That burst prolonged and expanded a steady growth in the daily selling rate that has been in evidence so far this year in spite of poor year-to-year comparisons.

Domestic deliveries, bolstered by high-powered sales incentive campaigns, totaled 682,117 last month, a 5.04 percent increase over 649,351 in March 1986.

Sales were up 19.27 percent in the final 10 days of the month to 282,358 compared with 236,735 last year.

The quarter closed with domestic sales off 12.17 percent with a total of 1,666,748 units compared with 1,897,887 in the similar 1986 three-month period.

Import sales in the month dipped 0.41 percent to 247,966 units from 246,945. For the quarter, sales were off 5.62 percent to 664,048 units vs. 703,614 in the similar period last year.

Imports captured a hefty 26.66 percent of the market last month in spite of the decrease. Their share was a bit below the 27.60 percent of market they garnered in March 1986.

Importers generally do not report 10-day sales.

Combined sales of United States-built and imported cars in March were up 3.76 percent to 930,083 units compared with 896,296 a year earlier.

But with a total of 2,330,796 units, combined sales — U.S. and foreign — in the quarter were down 10.40 percent from the year-earlier total of 2,601,501.

March's indicated daily selling rate for domestically built automobiles was 26,235 compared with 24,215 for February and 17,107 for January.

In March last year, the sales rate was 24,975 units per day.

March sales of the Renault Medallion, which was in its first month on the market, totaled 1,139 units and were in line with American Motors' forecast, according to William E. Enockson, group vice president — North American sales and marketing.

Sales records of any kind have been scarce so far this year, but Jaguar Cars Inc. set one in March with 1,067 deliveries of the XJ-S sport coupe. The previous record of 932 units was set in March 1986, the company said.

Another record was set by Saab, which has been setting monthly sales records since April 1982.

"As far as we know, no other car make can boast of an unbroken string of monthly sales records as long as five years," said Robert J. Sinclair, president of Saab-Scania of America.

However, even while congratulating Saab dealers, Sinclair had a word of caution for them.

"Our allocation of cars is only a few thousand over the 47,000 or so we received last year. With that kind of limited availability, we must expect the string of records to break sooner or later regardless of the continuing strong demand for Saab cars," Sinclair said.

Like other executives, Bob McCurry, senior vice president of sales and operations for Toyota Motor Sales U.S.A., blamed slow sales in early 1987 on a buying surge at the end of 1986.

"In addition, our availability — particularly in many popular car lines — is down," McCurry said. "But March showed sure signs of recovery and we expect the trend to continue through spring."

Sung Hak Park, president of Hyundai Motor America, was even more optimistic. He said his organization is on target for 240,000 sales this calendar year.

"The record-breaking consumer response we experienced during our launch has continued into our second year on the market. There definitely is great strength in this market segment," Park said.

Design award for Pininfarina

Sergio Pininfarina was awarded the 1987 Design of the Year award for the Cadillac Allante at the opening ceremonies of Auto Expo '87 in Los Angeles. Pininfarina is the only two-time winner of Auto Expo's Design of the Year award. He received the award in 1985 for the Ferrari Testarossa. Pininfarina heads the Italian design firm that bears his family name.

Overcapacity is conference topic

ANN ARBOR, Mich. — Automotive industry experts will gather here this week to discuss worldwide overcapacity and the struggle to cope with it.

"Is there enough business to go around?" will be the theme of the seventh U.S.-Japan Automotive Industry Conference April 14-15 at the University of Michigan.

In the past year, the automotive industry worldwide has begun to experience a number of problems, said conference director Peter J. Arnesen. He is director of the university's East Asia Business Program.

General Motors has begun laying off workers and closing plants, and Nissan reported an operating loss for the first time since the 1950s, Arnesen noted.

"But the more serious threat lies in the great deal of overcapacity in the global automotive industry today," he said. "The struggle to cope with this overcapacity is going to produce severe dislocations in the long run."

The conference consists of a public forum Tuesday and workshops on specialized topics on Wednesday. The keynote speaker at Tuesday's public forum will be Dr. Richard J. Schonberger, consultant and author of "Japanese Manufacturing Methods" and "World Class Manufacturing."

Other forum speakers include: E. Michael Mutchler, GM vice president and group executive; Douglas Fraser, former UAW president and professor of Labor Studies, Wayne State University; Ariyoshi Okumura, director and general manager, Industrial Bank of Japan; Stephan Doblin, vice president, planning and control, Renault; and John Betti, executive vice president, Ford Motor Co.

FORD

FROM PAGE 3

apparently would have recall responsibility only for defects that result from the alteration. If the defect exists in a component of the previously completed vehicle, the original manufacturer apparently would retain responsibility for conducting the recall."

This means Ford "would have recall responsibility for a defect which may be found in E-350 vans which have been altered but Ford may not have such responsibility for E-350 chassis delivered as incomplete vehicles."

Davis also told Ford he is sending letters to all final-stage ambulance manufacturers explaining their recall responsibilities.

The Ford plan announced by the Virginia attorney general and by Ford's safety director is not an official recall. The consumer group Center for Auto Safety, charged that the Ford program is not sufficient since it does not cover what the center called non-ambulance Ford vans and chassis with dual gas tanks.

A letter from Robert Dewey of the Center for Auto Safety to NHTSA head Diane Steed urges the agency to force Ford to recall all 324,000 Ford vehicles it says are potentially affected.

The center has had a petition pending since January for the recall of 1984-86 Ford Econoline vans, chassis and ambulances. The day of the Virginia announcement of Ford's plan to modify 1981-87 E-350 cutaway chassis and vans, the center sent to NHTSA 81 new reports of overpressurized fuel, including seven fires and four injuries. Twenty-two of these were on ambulances, some on motor homes attached to Ford chassis and some on regular production Ford vans that had not been modified or converted.

Spin off of Magna division likely; stock sale favored

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Magna International, Canada's leading auto parts supplier, expects to turn one of its operating groups into a separate public company by the end of the year.

The move would be in line with Magna's philosophy to keep its operating units relatively small despite overall dramatic growth, said Jim McAlpine, executive vice president. A stock sale would also allow the division to raise its own cash to help finance further expansion.

"We believe that public scrutiny is perhaps the best test of a company," explained Stephen I. Rodgers, Magna's planning director. In addition, Magna employees, who annually receive compensation based on the company's profits, could identify more closely with the su ess of their group, Rodgers said.

The most likely candidate for such a move is Magna's Cosma International Inc., which was formed earlier this year. The unit links Magna's stamping operations with its previous Cosma group. That unit was formed last year to supply car bodies for American Motors' Premier model at AMC's assembly plant in Bramalea, Ontario.

The stamping division alone had sales of $362 million in fiscal 1986. As Magna's divisions grow past the $400 million sales mark, the company believes they will be big enough to attract investors on their own.

John Miller, an analyst with Gardiner Watson in Toronto, said the plan could create other challenges while helping Magna raise cash.

"What it does is really questionable as far as your stock is concerned because you're really selling part of the company," Miller said. "Will investors be willing to pay the same price for a Magna with fewer assets?"

Rodgers said that concern is one of several that Magna will have to iron out before it goes ahead with its plan. The company is studying ways for Magna shareholders to share dividends or profit in some other way from the success of the other public firms it creates.

McAlpine also said that Magna needs to make its employees, customers and investors understand the rationale before it goes ahead. "It's got to be win-win for everybody or else it's no deal."

Magna, based in Markham, Ontario, went public in 1971. The company earned $1.02 billion in fiscal 1986, up 49 percent from the previous year.

In addition to Cosma, Magna has three other principal operating groups: Atoma (seating, mirrors, doors), Concord (trim, plastic components), and Maple (engine cooling systems, power train products).

Sales rate increases; days' supply declines

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

There has been a significant reduction in the industry's days' supply of unsold domestic cars in the last two months.

The U.S. industry's total number of cars on dealer lots or in transit April 1 stood at 1,945,438 units, the equivalent of a 74-day supply. A month earlier, the total was 1,869,591, equal to an 81-day supply, according to an Automotive News analysis.

But on Feb. 1, the supply was the equivalent of 105 days.

The total domestic-car inventory was the highest for any April 1 since 1979 when it stood at 1,974,082, a 62-day supply.

Several market influences are being felt, according to industry sources. For example, factory-backed sales-incentive campaigns and dealership promotions are widespread. And history shows that retail deliveries generally rise in the spring. A sales surge will contribute to industrywide car-supply reductions.

A series of General Motors assembly plant shutdowns began last week and should sharply pare the inventory of GM cars quickly, industry sources said.

American Motors' Alliance line in Kenosha, Wis., was closed during the final week of March because of sluggish sales.

As a rule of thumb, a 60-day supply of domestic cars is considered optimal. For imports, at least before quotas, it is 65 days.

Inventories of imported cars as of April 1 totaled 539,759 units, the equivalent of a 57-day supply. A month earlier the tally stood at 531,520 units, or a 58-day supply. As of April 1, 1986, the total was 338,084 units, or a 37-day stockpile.

The inventory of imported trucks as of April was 222,158 units, equal to a 65-day supply, compared with 222,077 units, or a 73-day stock, a month before.

By company, April 1 domestic-car inventories were divided this way: GM, 57.10 percent; Ford Motor Co., 24.97 percent; Chrysler Motors, 13.67 percent; Nissan, 1.37 percent; Volkswagen, 1.06 percent; AMC, 0.94 percent; Toyota, 0.47 percent; and Honda, 0.42 percent.

By size class, the April 1 domestic new car stockpile was comprised of 39.90 percent intermediates, 19.52 percent compacts, 19.01 percent subcompacts, 11.20 percent standards and 10.37 percent luxury cars.

Shares a month earlier were: Intermediates 37.25 percent, compacts 21.07 percent, subcompacts 19.83 percent, standard-size cars 12.35 percent and luxury 9.50 percent.

For imports, inventories by nation of origin shaped up this way as of April 1: Japan, 67.22 percent; West Germany, 20.59 percent and others 12.19 percent.

A month before, it was: Japan, 72.71 percent; West Germany 17.79 percent and others 9.50 percent.

Days' supply of imported trucks stood this way on April 1 (March 1 figure in parentheses): Chrysler 89 (101), Isuzu 86 (93), Nissan 84 (86), Mitsubishi 70 (69), Mazda 71 (66), Toyota 48 (64) and Suzuki 16 (22).

CONGRESS

FROM PAGE 1

bert E. Mercer, chairman and chief executive officer of Goodyear Tire & Rubber Co., who last fall thwarted financier Sir James Goldsmith's hostile takeover bid for the Akron-based company.

Greenwald's and Mercer's talks will address this year's Congress theme, "Facing Up to Competitive Times."

In reflecting on Chrysler's dilemma in the early '80s, Greenwald has said, "Back then all Chrysler could think about was survival. People laughed when we said we were going to make it.

"People aren't laughing anymore. Instead, school kids are sending Lee Iacocca letters that say things like, 'I want to be the best, too, just like you.' "

Mercer will discuss the state of the automotive supplier industry.

The Goodyear chairman recently provided a twist to British financier Goldsmith's claim that American free enterprise is threatened by a triangular alliance of big business, big labor and big government.

"I agree that American free enterprise is threatened by a triangular alliance," Mercer said, "but the alliance we should be worrying about isn't business, labor and government. It's corporate raiders, arbitrageurs and Wall Street investment bankers."

Daily themes of this year's Congress will be: "Strategies for the Domestic Industry," Monday, July 27; "The Importance of a Global Perspective," Tuesday, July 23; and "Coping with Change," Wednesday, July 29.

Among the speakers on Monday, July 27, will be: Norman Braman, chairman of Austin Rover Cars of North America, importer of the Sterling; Edward E. Hagenlocker, vice president of Ford Motor Co. and general manager of Ford Truck Operations; and Rene C. McPherson, former chairman of Dana Corp. and dean of Stanford University's Business School.

Robert White, president of the Canadian United Auto Workers Union, will speak at a post-dinner session on Monday evening, July 27.

Among the speakers on Tuesday, July 28, will be: Robert M. Sinclair, president, Saab-Scania of America Inc., importer of Saab cars; and Michael Kimberley, managing director and chief executive officer of Group Lotus, British-based manufacturer of Lotus cars, which was purchased last year by General Motors.

Speakers on Wednesday, July 29, will include: Helen O. Petrauskas, Ford Motor Co. vice president in charge of environmental and safety engineering; Allen Jacobson, chairman of 3M Co.; and Maryann Keller, auto analyst and vice president of Furman, Selz, Mager, Dietz & Birney.

In all, the Congress will have a total of 34 speakers, sharing their knowledge and viewpoints on where the auto industry stands today and where it is headed.

PRODUCTION

First-quarter car output 2% below 1986

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers built 2,078,359 cars during the first quarter of this year, 9.18 percent more than the 1,903,518 assembled in the fourth quarter but 2.46 percent less than last year's first-quarter output of 2,130,706.

So far this year, according to adjusted figures, 2,236,609 units have been assembled, 8.32 percent below the 2,439,547 completed last year at this point.

Car production during March totaled 742,941, which was 6.71 percent more than February's 696,195 and 11.34 percent more than the year-ago month's 667,262.

Companies split last week's scheduled output as follows: GM, 50.01 percent; Ford Motor Co., 27.55 percent; Chrysler Motors, 12.24 percent; Honda of America Manufacturing Inc., 4.15 percent; New United Motor Manufacturing Inc., 2.50 percent; Nissan Motor Manufacturing Co. U.S.A., 1.82 percent; Volkswagen of America, 1.25 percent; and American Motors, 0.48 percent.

Beginning April 20, production at GM's Flint, Mich., plant will be cut to four days a week with two eight-hour shifts daily.

On May 20, GM plans to call back 2,220 workers at its Van Nuys, Calif., plant. The plant will be idle from April 30 to May 8 for team training.

The first shift at GM's Doraville, Ga., plant will be idled May 15 to convert to the new GM10 models. However, the second shift will not be shut down for conversion until early June.

GM's Leeds, Mo., plant will be down for two weeks, starting April 27, idling 2,000 workers. When the plant resumes production on May 11, line speed will be reduced by 17 units per hour, putting 700 workers on indefinite layoff.

GM's Arlington, Texas, plant, which is presently working one shift, will be shut down May 8 to prepare it for the full-size cars scheduled to be built there.

About 2,000 workers will be temporarily laid off at Arlington.

The following GM plants resumed output this week after being idle for one week to adjust inventory. They are: Pontiac, Mich.; Detroit-Hamtramck; Wentzville, Mo.; Tarrytown, N.Y.; and the Flint, Mich., body assembly plant.

As previously announced, GM's Oklahoma City plant is down until April 20 for inventory adjustment.

GM slated Saturday (April 11) overtime at its Lansing (No. 1) plant.

Ford slated Saturday overtime at its Lorain, Ohio, plant.

Chrysler's Sterling Heights, Mich., plant was scheduled for Saturday overtime. The plant is slated for daily overtime this week.

All assembly plant will be closed Good Friday.

UPDATED SECOND QUARTER AUTO PRODUCTION
1987 forecast vs. 1986 actual

	1987 2nd Quarter forecast	1986 2nd Quarter actual	1987 1st Quarter actual
GM	1,036,000	1,160,288	1,024,666
Ford	485,000	496,955	534,209
Chrysler	284,800	352,233	315,635
AMC	6,200	16,040	8,647
Honda	84,315	51,093	87,398
NUMMI	51,000	58,909	50,707
Nissan	36,256	25	36,324
VW	24,800	25,726	20,773
Industry	2,008,371	2,161,269	2,078,359

March truck output sets record

U.S. truckmakers produced 358,622 units in March, the highest ever for that month. The previous March peak was 358,126 in 1979.

The month's build was 11.71 percent more than February's 321,017 and 24.09 percent more than the year-ago month's 289,001.

The first-quarter total of 991,375 was the best for that period since 1979 when 1,003,218 trucks were built.

The quarter's output was 21.23 percent more than the fourth quarter's 817,721 and 10.50 percent more than the 897,188 built in the first quarter of 1986.

Year-to-date adjusted figures show that 1,066,383 trucks have been assembled, 3.63 percent more than the 1,029,074 completed last year at this point.

General Motors slated Saturday (April 11) overtime at the following plants: Baltimore; Detroit; Flint, Mich., (No. 2); Lordstown, Ohio; and Pontiac, Mich.

Output goal reduced 7%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers' updated second-quarter production forecast of 2,008,371 cars is 7 percent below last year's output of 2,161,269.

General Motors plans to cut its second-quarter schedule by an additional 94,000 units (Automotive News, March 30). That would bring its total to about 1,036,000 cars, an 11 percent decrease from last year's second-quarter production of 1,160,288.

Ford Motor Co.'s forecast calls for 485,000 units, 2 percent below the 496,955 assembled during the same period last year.

Chrysler Motors' estimated car output of 284,800 is 19 percent below the 352,233 completed during the second quarter of 1986.

Second-quarter output at American Motors is scheduled to decrease 61 percent to 6,200 cars. In the same period of 1986, AMC built 16,040.

Honda of America Manufacturing Inc. has targeted assembly of 84,315 cars, 65 percent more than the 51,093 that were built in 1986's second quarter.

New United Motor Manufacturing Inc. has scheduled production of about 51,000 cars, 13 percent below the last years second-quarter total of 58,909.

Nissan Motor Manufacturing Co., U.S.A., plans to build 36,256 cars this quarter. Last year, Nissan's car plant was down for model changeover to the four-door Sentra and only 25 models were built during the second quarter.

Volkswagen of America has scheduled 24,800 units, 4 percent below the 25,726 completed in last year's second quarter.

Canadian cars, trucks trail 1986

Canadian carmakers assembled 230,383 cars in the first quarter of this year, 20.89 percent less than the 291,237 completed in the fourth quarter and 16.47 percent below last year's first-quarter total of 275,833.

March car production March of 76,599 was 3.26 percent below February's 79,181 and 22.22 percent below the year-ago month's 98,492.

First-quarter truck production totaled 209,711, 39.59 percent more than the 150,226 completed in the fourth quarter but 12 percent below the 238,313 assembled in the first quarter of last year.

March output of 79,212 trucks was 16.10 percent more than February's 68,222 but 0.26 percent below the year-ago month's 79,419.

SQUEEZE: *Currency fluctuations create headache as GM tries to set price for LeMans*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — When General Motors formally announces the price of its South Korean-built Pontiac LeMans to dealers later this month, it will be the culmination of a long debate over one of the most critical components in a world car today — currency.

The GM car — its base and many of its parts coming from West Germany, its assembly taking place in South Korea, and its marketing being strongly aimed at the United States — is a hot potato ensnarled in the machinations of currency values involving each of those countries.

And between the time the car was conceived to revive the LeMans name almost three years ago and now, the cost of some of its most expensive components have risen with the West German deutschemark — increases affecting the costs of GM's South Korean partner, Daewoo Motor Co. In the process, the South Korean won has stayed about equal with the U.S. dollar — spurring a trans-Pacific debate over who will bear the burden of the increased costs and how much GM will pay Daewoo for the car.

And those GM negotiations are similar to talks going on between every auto manufacturer with a Third World partner that buys components from Europe and Japan.

In the GM-Daewoo case, Daewoo is building the LeMans, a front-wheel-drive subcompact that debuts in the United States in June. The car was engineered by GM's West German subsidiary, Adam Opel AG, and is built off the Opel Kadett platform.

The discussions between GM and Daewoo centered on the drastic fluctuations in world currencies that have occurred since the idea for the car was conceived three years ago, sources said.

In the past 18 months, the West German mark has risen 47 percent against the U.S. dollar and nearly as much against the Korean won, which follows the path of the U.S. dollar.

Some components for the LeMans come from Opel in West Germany. They now cost Daewoo more than they did 18 months ago and certainly more than three years ago when the plan was conceived.

GM and Daewoo have struck a deal on the price. That price will not change the retail price of the car, which is to be announced later this month, said Pontiac General Manager J. Michael Losh.

GM revises bonus setup for top execs

By Michelle Krebs, Mary Connelly and Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Against the backdrop of another year of million-dollar-plus compensation packages for Big Three top executives, General Motors said it wants to virtually eliminate cash bonuses and modify its stock incentive plans.

But while GM's bonus plan announcement was the major news — even though its top 600 executives could continue to receive cash bonuses after the change — the common thread in 1987 proxy statements released by GM, Ford and Chrysler was high executive compensation.

Chrysler Chairman Lee A. Iacocca led the pack with salary, bonus, stock grants and exercised stock options topping $20.57 million, followed by Ford Chairman Donald E. Petersen ($4.33 million), Ford President Harold A. Poling ($2.88 million), Chrysler Motors Chairman Gerald Greenwald ($2.71 million), Ford Executive Vice President Louis R. Ross ($2.50 million), Chrysler Motors President Harold K. Sperlich ($2.30 million), and GM Chairman Roger B. Smith ($1.73 million).

The newly proposed GM compensation plan would eliminate most cash bonuses and replace them with stock options and stock grants, which would be more closely tied to the company's performance.

But the top 600 executives would continue to receive cash bonuses under GM's long-term bonus plan called the Performance Achievement Plan. Over the five-year period, the plan could pay out as much as $60 million in either cash or stock.

Smith said the change is a "major step in our strategic redirection to maximize profitability and more closely relate incentive compensation with the enhancement of stockholder value."

Last month, GM announced it would buy back as much as 20 percent of its stock by 1990 to increase the value of shares outstanding. The move would cost GM about $5 billion. The elimination of cash bonuses ends a nearly 70-year-old tradition, a tradition that has been criticized by labor leaders, stockholders and consumer advocates.

In the process, GM increases stockholder value and limits its exposure to a hostile takeover. The new plan sets common goals for GM managers and stockholders, since managers stand to do better if the stock performs well.

Under the previous stock incentive plan, only the top 850 to 900 executives were eligible for stock options. The new plan includes the approximately 5,000 executives who, under the old compensation plan, were eligible for cash bonuses.

The old plan allowed up to 7.5 million shares to be distributed as stock options over five years. The new plan would allow up to 25 million shares of GM common stock and 5 million shares each of Class E (Electronic Data Systems) and Class H (GM Hughes Electronics) stock to be added to the stock incentive program.

Dissenters make headway at UAW bargaining parley

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — Victor Reuther has been attending UAW conventions as long as there's been a UAW. But the brother of Walter Reuther — the late UAW president — said last week's bargaining convention was different.

A legendary presence in the labor movement, Victor Reuther said that in his trips across the country he has seen "more anger and frustration in the rank and file than in the past 20 years," but that there was "no real vehicle for its expression at the convention."

Other observers and delegates at the UAW convention here last week said that the international leadership seemed unnecessarily defensive. They said President Owen Bieber fought changes in procedure, apparently fearing delegates would take the occasion to vent their discontent.

Many in the rank and file say that concessionary contracts since 1982 have not prevented plant closings and job loss. In recent months, they have expressed dismay over "whipsawing," or General Motors'

Big 3 profits expected to top '86 for quarter

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

The Big Three automakers are expected to report combined first-quarter profits of about $2.21 billion, about 3 percent more than they earned in 1986's first quarter.

Higher profits for Ford Motor Co. are expected to offset declines for General Motors and Chrysler Corp.

GM and American Motors are scheduled to announce first-quarter results this week; Ford and

Warranty scam hits Pontiac

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has been hit with another warranty payment scam, resulting in an internal investigation and a federal probe.

Dealers familiar with the situation last week said most of the illegal activity was located in Pontiac's Chicago and Boston zones.

A Pontiac spokesperson last week confirmed that there have been "isolated incidences" of warranty fraud within its organization.

"We are conducting an internal investigation, and we are cooperating with federal authorities," the spokesperson said.

"Several employees have been dismissed."

One prominent GM dealer who asked not to be identified said he believes the Chicago zone situation was limited to a single individual.

"Somebody's misapplying funds," said the dealer, who also confirmed that GM auditors have been visiting various dealerships, "looking for checks and signatures and stuff."

He said he believes that most of the misapplication of funds happened in the East, but that dollar amounts involved were comparatively small — perhaps less than $10,000 — because the fraud was uncovered early.

In the mid 1970s, several Chevrolet zones, particularly Boston, were hit with organized warranty fraud stemming from submission of phony warranty claims by dealers.

In 1974 a Chevrolet regional service manager was murdered. He had been investigating the fraud that came to be known at the time as "Motorgate."

One dealer alone was believed to have bilked GM out of more than $600,000.

That dealer and several of his employes subsequently were convicted of fraud in Massachusetts state courts.

Last Friday, J. Michael Losh, Pontiac general manager, downplayed the current warranty fraud. He termed it "old news." Losh said Pontiac "closed the books on it months ago," and said the ongoing dealership service department audits are routine.

VW tags Fox 2-door wagon at $6,590; Brazilian-built model on sale in May

NEW YORK — Volkswagen of America chose this week's auto show here to introduce the station wagon version of its Brazilian-built Fox. VW said that at a suggested retail of $6,590, it is the only wagon under $7,000 available in the United States.

The wagon, which goes on sale late next month, rounds out the Fox line of two-door and four-door sedans introduced earlier this year. VWoA believes it will be the only two-door wagon sold in the United States.

The car has a 1.8-liter fuel-injected engine that produces 81 horsepower. A top speed of 101 mph is claimed.

The Fox is made by Volkswagen do Brasil at its plant near Sao Paulo. The Fox models are VW's entry-level cars in the United States. The two-door sedan is $5,690, and the four-door sedan is $6,490.

Chrysler plans to boost truck capacity

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors still plans to expand its truck production capacity, despite previously reported plans to continue building cars at the Jefferson Avenue plant in Detroit through the 1988 — and, possibly, the 1991 — model year.

The Detroit plant had been expected to produce trucks between 1988 and 1991 but that plan was shelved, according to company sources. Production of K- and E-body cars will continue at the plant (Automotive News, April 13).

"Under any scenario that we looked at, we will significantly expand our truck capacity over the next five years," said Jerome B. York, vice president — Truck Operations.

York said that Chrysler had 13.3 percent of the truck market through the first quarter of 1987 with about a 60 percent to 65 percent product coverage of market segments.

The company is aiming at approximately 93 percent product coverage of the market and 20 percent market penetration by the 1992 model year under its $2.2 billion truck-development program.

Assuming that Chrysler is successful in its acquisition of American Motors, it would achieve its market-penetration goal earlier.

"Whereas we had been talking about getting 20 percent penetration by the early 1990s, we would get there by the late 1980s," York said.

Chrysler's goal of a 20 percent market share is based on a truck market of five million units.

Jeep had about 4.2 percent of the truck market in the first quarter. Assuming the acquisition, Chrysler would have an immediate share of 17.5 percent.

At any rate, "We still need more capacity," York said.

Chrysler currently has capacity to build about 400,000 minivans at its St. Louis and Windsor, Ontario, plants; 270,000 trucks at the Dodge City plant in Warren, Mich.; 130,000 in the Pillete Road plant in Windsor; and 25,000 Ramchargers in Mexico.

Even without the Jefferson Avenue plant, Chrysler could pick up — assuming its acquisition of AMC goes through — about 80,000 units worth of extra truck capacity at AMC's Brampton, Ontario, and Toledo, Ohio, plants.

Brampton builds the Jeep Wrangler and Toledo assembles the Jeep Cherokee/Wagoneer and Grand Wagoneer.

"There are any number of (plant) loading configurations, and we're continually assessing these," York said. "Yes, there are ways to generate the capacity we need without using Jefferson Avenue."

High-volume vehicles are getting priority attention. They include the new line of full-sized pickups planned for 1990-91, a new small sport/utility truck and the extended-cab version of the Dakota pickup.

Chrysler Motors currently isn't using its 800,000-unit capacity and likely won't until its new extended-cab Dakota pickup arrives on the market in the fall of 1988.

Extended-cab models currently account for about 25 percent of the industry's small-truck sales.

York confirmed reports of a new Chrysler-built V-6 "on the drawing board and in test cells" for future minivans and passenger cars, and the expanded availability of fuel-injection engines for trucks. The current V-6 engine is built by Mitsubishi.

Chrysler also plans to offer rear anti-lock brakes on some pickups, similar to Ford and Chevrolet. The system will be phased in over a three-year period.

Dodge-Plymouth minivans pick up; Chrysler-badged version scrapped

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors officials believe the drop in Caravan/Voyager sales earlier this year was largely attributable to the introduction of a new engine, which hurt sales of four-cylinder models already on the market.

The inventory problem for the minivan, however, appears to have been pretty well resolved.

"We've had significant dealer input that the (sales) hiccup on Caravan/Voyager in January and February resulted largely from people who had heard or seen that a V-6 was coming and preferred to wait for the larger engine," said Jerome B. York, vice president — Truck Operations, Chrysler Motors.

In another development, the company apparently decided that Chrysler dealers won't get a Town and Country version of the minivan. The idea for an upscale Chrysler-badged minivan was shelved after protests from Dodge dealers and because, at the time of the decision, Plymouth and Dodge minivan sales were very strong.

However, Chrysler's minivan sales were off 22.4 percent during the first two months of this year. In March, sales of minivans were off only 3.2 percent.

York said the current inventory mix of minivans with four- and six-cylinder engines is "reasonably well-balanced. Our days' supply of minivans and wagons is about 44 days."

He denied that the 72-month financing program on Caravan/Voyager was a "short-term fix" for slower sales, adding that Chrysler Financial was trying to attract more business rather than solve a problem.

Some dealers expressed apprehension about 72-month financing because it takes a customer out of the market for too long. And, given the depreciation rate, it can often leave a customer owing more on the vehicle than it can fetch on the market.

"Based on my own feeling and the results we've seen, there's not a huge amount of business to be had" in six-year finance contracts, York said. "If we offered a spectrum of (different length) contracts, (six-year financing) would end up being in the 5- to 6-percent range."

GM wins X-car lawsuit; no recall necessary

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors need not recall the remaining 1980 X-cars; U.S. District Judge Thomas Penfield Jackson decided there was no brake defect.

The sweeping decision accepted every argument made by the company. It rejected all government testimony, along with the theory under which the case was brought.

The decision delighted GM and all other auto companies. But it is at odds with previous decisions of federal court judges and appellate rulings.

NHTSA will have to decide whether it wants to spend more time litigating a case in which cars are approaching the eight-year statutory limitation. It must decide whether to appeal in order to recover ground which it thought was secure as a result of court rulings in earlier defect cases.

Still to be litigated is one count of the government's August 1983 suit: that in 27 instances, GM "made false statements" to the government and should be fined $1,000 for each instance. The other proposed fine — $4 million — depended upon GM being found guilty of five other counts, all of which Jackson dismissed.

There is at least one X-car class action pending against GM. There is also an X-car litigation group, described as a consortium of plaintiffs' attorneys with a steering committee headed by Guerry R. Thornton, of Atlanta.

GM X-cars are the Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark. Pontiac and Olds dropped the X-cars at the end of the 1984 model year. Chevy and Buick followed a year later. Altogether, some 3.3 million X-cars were produced.

GM introduced the X-cars in April 1979. It almost immediately made a number of voluntary recalls, including two influenced by NHTSA's brake investigation. One involved the proportioning valve in 47,000 manual-transmission X-cars; the other involved premature wheel skidding in 240,000 vehicles. NHTSA termed both recalls inadequate.

GM Chairman Roger B. Smith said he was "gratified" by Jackson's decision. He hailed it as good news for stockholders because it "reaffirms the quality" of GM products. He added that "real world experience based on actual accident data continues to show" the X-cars have "one of the best safety records for cars of that size on the road today."

NHTSA head Diane Steed was disappointed. She said her agency has not yet decided whether to appeal. NHTSA said the 1980 X-car population was 1,570,959. The agency had received 4,282 consumer complaints and 1,417 accident reports. Of those reports, 974 involved property damage and 427 involved occupant injuries. There were 18 deaths reported in in 16 accidents.

NHTSA still has active engineering analyses in its defect investigation roster. They involve power steering in all X-cars produced; rear brake lockup in 1981-85 X-cars (the defect alleged in the court case on 1980 X-cars); and

see X-CAR, page 57

Big-truck dealer total dips, but profits rise

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DALLAS — The ranks of Class 6-7-8 truck dealers are thinning, but the profitability of the survivors is picking up.

Meanwhile, the strong dealer turnout at the American Truck Dealers convention here — and particularly at key management seminars — indicates dealers' growing interest in developing more sophisticated financial control of their operations.

The ATD show itself drew a near-record 1,581 attendees, second only to last year's turnout of 1,621. Officials said the show would have set a record had it not been for the limits imposed by available exhibit space and exhibitors.

Lawrence M. O'Connor, truck dealership management consultant for the National Automobile Dealers Association, and Robert G. Young, NADA manager of the ATD 20 Group Program, attributed dealer attrition to the high costs of doing business and lack of gross profits in the medium/heavy truck market, economic factors like the depression in oil and agriculture and the franchise consolidations like those at General Motors/Volvo White.

ATD's Class 6-7-8 dealer membership dropped from 1,828 in February 1986, to 1,744 in February 1987.

Currently, the decline appears to be leveling off, but ATD officials see a continued long-term contraction in the medium/heavy truck dealer body.

They estimate there are about 2,400 to 2,500 such dealers today, which is fewer than the 3,000 estimated by Freightliner President Peter E. Rupp in his address to this year's ATD convention.

They agreed, though, with Rupp's general prediction of another 20 percent decline in the number of dealers during the next five years.

Surviving dealers, however, appear to have reconciled themselves to market conditions and are learning to make money on less volume.

"Larry (O'Connor) and I are very encouraged by that," Young said. "We think the dealers have finally recognized that this thing is not going to turn around in 30 days. And they have begun to manage better what is available to them — their assets and expenses. They're just becoming a lot better businessmen."

NADA officials feel that the Class 6-7-8 market will continue to stay in the 250,000-260,000-unit range during the next 10 years — about the same level as 1986 — and they have been stressing asset management as the way to make money in that kind of market.

Added O'Connor, "We're not telling the dealers to sell, sell, sell. We're telling them to manage, manage, manage. It's not just go out and sell at any expense any more. It's manage the business properly."

And improving profits reflect that change in philosophy.

Although more dealers lost money during a six-month period last year, winners are earning more money now and losers are losing less, Young said.

Each month, ATD tracks a fairly wide cross section of dealers in what it calls a critical variables analysis.

That analysis shows that while 54 percent of medium/heavy truck dealers were losing money selling new and used trucks in April 1986, 58 percent were losing money selling such trucks in November 1986.

However, the average (of winners and losers) shows the typical dealer losing $3,100 in May 1986 on his new- and used-truck sales and earning $475 a month profit by November 1986.

"The ones who were losing have reduced their losses significantly," Young said. "They've adopted a more realistic approach to trades. And a lot of dealers have bitten the bullet on (carrying) expensive inventories."

Dealers are also making incremental changes in asset management to improve their profitability.

"That's where we see the trend changing, especially in our 20 Group programs. In the last year, specifically, we have been focusing on that at each meeting," Young added.

"We've been telling the dealer 20 Groups that they have to take charge of their dealerships, that the dealer has to be hands-on involved in the fixed-cost part of his operation, in parts and service and so forth. It's quite a bit different from the car side in many regards," he concluded.

Kenworth speed-control system designed to boost fuel economy

KIRKLAND, Wash. — Kenworth Truck Co. introduced a new electronic road speed control system that is designed to help vehicle owners attain better economy.

Called the Kenworth Engine Governing System (KEGS), it limits vehicle speed at a lower transmission gear than traditional governors and encourages progressive upshifting.

Kenworth said KEGS is designed to give drivers the full use of the engine's total operating range during most of the acceleration process, while optimizing fuel economy.

The system allows the vehicle owner to set two speed values. He selects the highest speed he wants his vehicle to travel in top gear, usually between 60 and 65 mph. Then, he chooses the highest speed allowable in any other gear. That "intermediate" speed typically ranges between 54 and 59 mph.

When the vehicle is in operation, KEGS senses speed via electronic impulses generated in the driveshaft.

The trigger mechanism for the system tells the engine which road speed governor to use, intermediate or maximum, based on actual road speed.

When the engine speed is faster than the road speed governor's setting and the vehicle speed exceeds the intermediate speed, engine speed is trimmed back, overriding the driver's throttle control.

KEGS is currently offered on all Kenworth trucks specified with Cummins L10 or NTC engines.

Durakon to sponsor truck-and-tractor-pull series

LAPEER, Mich. — Durakon Industries, a leading producer of pickup truck bed liners, signed an agreement with SRO/Pace Promotions Inc. to sponsor the 1987 United States Hot Rod Association's truck-and-tractor-pull series.

Durakon is contributing more than $200,000 to sponsor 40 truck-pull events in 30 cities this year, according to Mark Wayne, Durakon director of advertising and public relations. It sponsored the events on a limited basis in 1986.

Separately, it is also sponsoring a monster truck for the first time. It is called the "Duraliner Giant" and will appear at each truck-pull event.

Renault tells Mack it is not for sale

HAGERSTOWN, Md. — Renault has told Mack Trucks it is not looking for a buyer for Renault's 41 percent share of Mack.

Walter Meck, Mack's executive vice president for finance, said speculation about an imminent sale is "completely false." Meck said he recently spoke with top officials of Renault "and they authorized me to say that that option is not under consideration. . . . They have no present or future plans to divest themselves of Mack."

Renault bought its 41 percent share in Mack from 1979 to 1983.

— The Associated Press

Correction

Import-car sales for March 1987 were incorrectly totaled in a table on Page 54 last week. The correct total is 247,966.

IF YOU WANT YOUR COMPUTER TO POUR ITS HEART OUT...

Computers specially designed for automobile dealers have taken hard information in. But have been very selective about how they've given it out.

But now SofTac has come up with software that goes straight to the heart of the problem.

Its SofPoll™ spreadsheet communications system, for instance, can talk directly to any PICK-based or PICK-type computer and convince it to transfer information to PC's without any need to rekey.

For those who want their PICK-based computer to work a spreadsheet without downloading to a PC, SofTac offers the CompuSheet + package.

Either way, you can take hard information and determine the profitability of adding more salespeople. Increasing your inventory. You can also compare information between stores. All for the package price of $595. And with no wasteful monthly maintenance charges.*

SofTac has other computer softening packages, too. They include SofList™ report writer, a SofQuery™ information indexing system and SofPal™, an executive time management system. Custom programming is also available.

SOFTEN IT UP WITH SOFTAC™

Until now, automotive computers have been hardhearted about the ways they've given out information. But now they're opening up. And pouring their hearts out with SofTac. To everyone's profit.

Execs, Bieber join hands

DETROIT — Chrysler Corp. Chairman Lee Iacocca and Ford Motor Co. Chairman Donald Petersen each co-signed a letter with UAW President Owen Bieber for publication in their companies' employee newspapers.

The letters ask employees to write their legislators urging them to support legislation that would reduce U.S. trade deficits with countries such as Japan that run large worldwide trade surpluses.

General Motors is not in favor of trade legislation.

Iacocca and Bieber blame the trade deficit for the loss of nearly three million U.S. industrial jobs since 1980. They say the job loss occurred despite record productivity and quality improvements — especially in the auto industry — and in spite of sacrifices by American workers to make products more competitive with those of the Far East.

Iacocca and Bieber rebut the charge that American workers don't care about their work and that American managers aren't effective. Rather, the letters say, the country needs a strong trade bill to resolve the deficit.

The Petersen-Bieber letter details how bilateral negotiations and currency realignment have not corrected the trade imbalance. The Ford and UAW chiefs also ask employees to support a strong trade bill "that sets goals and timetables" to redress the imbalance.

Chrysler Newark workers OK new talks

NEWARK, Del. — Members of UAW Local 1183 at Chrysler Motors' Newark, Del., assembly plant, in a second vote, agreed to reopen the local labor contract to ensure the plant's future.

UAW members voted 76 percent to 24 percent April 5 to authorize the local bargaining committee to negotiate a "modern operating agreement" at the plant. Chrysler said it must have a new agreement by June 19 to begin making a new line of A-body cars at Newark in late 1988.

The current local agreement expires in September 1988. In February, UAW members rejected Chrysler's request to negotiate a new pact. Following the first vote, a petition drive was launched in the plant seeking reconsideration.

A union membership vote on a new agreement will be held after a proposed pact is negotiated.

Chrysler employs 4,300 persons, including 3,800 hourly workers, at the Newark plant.

U.K., Italy take the lead in W. Europe car sales

By Richard Johnson

With West German new-car sales down over 15 percent in 1987 from the same period a year ago, the United Kingdom and Italy have edged into the top two positions among Western European countries.

Sales in West Germany soared to a record 2.83 million last year, nearly a million units ahead of second-place France. But volume dropped more than 27 percent in January. A strong showing in December was prompted by a Jan. 1 reduction in the tax write-off for cars equipped with catalytic converters.

West German sales were down only 3.5 percent in February and stood at 334,100 through the first two months, 15.8 percent below the country's 1986 pace.

The sales figures are based on industry estimates compiled by *Automotive News*.

NEW CAR SALES BY COUNTRY IN EUROPE

Country	2 mos., 1987	Percent Gain/Loss
United Kingdom	341,400	+ 4.3
Italy	340,300	+ 3.3
West Germany	334,100	−15.8
France	282,900	+ 4.0
Netherlands	125,600	+ 3.0
Spain	124,600	+77.0
Belgium-Luxembourg	75,100	−13.5
Sweden	40,000	+ 2.5
Switzerland	39,600	− 1.7
Austria	29,200	−10.5
Finland	26,900	+ 1.5
Norway	20,300	−35.3
Denmark	16,900	−37.1
Portugal	16,000	+22.7
Ireland	14,000	+ 1.8
Greece	7,000	−32.4
TOTAL	1,833,900	− 0.3

The United Kingdom, which finished fourth in 1986, is up 4.3 percent through February to 341,400 — the biggest increase among Western Europe's big four markets. Total sales improved 9.6 percent in February.

Ford, the market leader in the U.K., has raised its share to 27.2 percent from 26.3 at the same time last year. It has increased sales better than 8 percent to 92,900 so far in 1987.

Austin Rover, which saw its home market share slip to 15.8 percent last year, was at 17.2 percent through February on sales of 58,700. Rover volume in the U.K. was up 17 percent in February.

The Italian market was ahead 3.3 percent in January/February to 340,300. Excluding new-acquisition Alfa Romeo, Fiat boosted its dominant share at home to 54.5 percent compared to 52.7 percent at the same point last year. The stable Italian market gave Fiat Auto, without Alfa, the number one pan-European sales ranking through February over 1986 leader Volkswagen Group, which has been hurt by slumping West German sales.

New-car sales in France were up 4 percent in the first two months to 282,900. Volume improved over 15 percent in February alone.

The battle for French market leadership between Peugeot S.A. and Renault continues to run tight. Combined, Peugeot and Citroen held 33.3 percent of the market, compared to Renault's 31.1 percent.

The fastest-growing national market in Europe continues to be Spain. The sales rush, which began last summer, has continued unabated. The country set a record in 1986 at 687,600 and sales so far in 1987 are up 77 percent.

The biggest gains in Spain have been realized by third-place General Motors and fourth-place Ford. GM, which saw its Spanish volume climb 45 percent to over 100,000 last year, is ahead 131 percent in the first two months of 1987. Ford, which registered a 28 percent increase last year to 98,600, is up 116 percent through the first two months. ■

Nigerian auto industry hits the skids

Devalued currency, import incentives may force plant closings

By Baffour Ankomah

The current economic crunch that is squeezing life out of Nigeria's once-buoyant economy has seriously hurt the prospects of all of the nation's industries. Nigeria's car assemblers are among the hardest hit.

Nigeria's auto industry consists of eight assembly plants spread all over the country. The largest are Peugeot Automobile of Nigeria (PAN) based in Kaduna in the north, and Volkswagen of Nigeria Ltd (VWON) based in Lagos in the south.

In 1975, the country's leaders made an allowance in the Third National Development Plan (1975-'80) for a transportation program that would support agriculture, trade, industry — and facilitate movement of people and goods throughout the Federation. Nigeria has the highest population in Black Africa — 106 million people.

To attain these goals, in 1975 the government actively encouraged the establishment of joint-venture car assembly plants, hoping that in 10 years the foreign technical partners would transfer the technology to Nigerians to enable the country to manufacture its own cars and trucks.

There was even an agreement between the Nigerian government and VWON, which said the federal government would ban the import of fully built-up vehicles once VWON went into production. The ban was to give VWON and other assemblers a monopoly over the local market.

But, according to Pat Utomi, assistant general manager of VWON, the government has not kept its side of the agreement, including not paying its 40-percent share of the capital establishing VWON.

Nigerians assemble Beetles at VWON assembly plant.

It was also expected in 1975 that Nigeria's flat steel mill complex and petrol-chemical plant would be commissioned simultaneously with the car assembly plants, to support the automotive industry with locally produced inputs. Both the steel mills and the petrol-chemical plant have yet to materialize, pushing the car assemblers into the foreign market where they shop for almost every commodity associated with the auto industry.

In the days of the oil boom — the late 1970s and early 1980s, when Nigeria's currency was worth $2 — the assembly plants had no problems buying CKD parts from abroad because of a seemingly inexhaustible supply of foreign currency from the Central Bank of Nigeria.

Business was good. Demand for cars was high as the Nigerian public had more money to spend. Even civil servants, known to be the poorest group of workers in Africa, were given car loans by the government to purchase their own cars. Out of an estimated car population of 3.8 million for Black Africa, Nigerians own about 1.2 million. This is largely because of the patronage given the infant assembly plants in those days.

Even though they were producing below capacity, the Nigerian assemblers altogether produced 213,592 vehicles between 1982 and 1984 — instead of their total installed capacity of 608,620.

Now the days of the country's economic bliss are over. The assembly plants, starting under the restrictions of the government's austerity measures, have resorted to labor retrenchment and higher prices to keep afloat.

Local car prices have hit an all-time high. In 1981 a locally assembled Peugeot 505 GR (a favorite of Nigerians) sold for 6,691 naira, of the equivalent of $13,382 in those days.

With the introduction of the Second Tier Foreign Exchange Market (SFEM) last September, the naira is exchanging today for almost four to $1. The same 505 that brought 6,691 naira in 1981 is now selling for 60,085 naira, or $15,327 in 1987 at the SFEM rate.

In dollar terms, the price appears reasonable. But to the Nigerian earning naira, not dollars, the 505 is very expensive today.

The same goes for the ever-popular Volkswagen Beetle. In 1981 it sold for 4,395 naira, or $8,790 (at the pre-SFEM rate). In January this year the Beetle hit a record 29,141 naira or $7,433 at the SFEM rate. In February, VWON cut the price to 24,982 naira ($5,372 SFEM).

In real (dollar) terms, Nigeria's auto assemblers are losing. Yet they have come under severe criticisms of late from the press and the public for their high prices.

The problems for the assemblers is that with SFEM, the value of the naira has greatly depreciated. This greatly increases the prices of the components which are imported for Nigerian assembly.

Nigeria's auto industry is in the worst of times, and it appears to be on the verge of pulling up its roots. Last year, PAN and Leyland Nigeria Ltd. shut down temporarily for lack of imported cars kits. PAN reduced its workforce from 4,000 to 2,600, while VWON cut 1,000 workers. In all, the eight assembly plants fired 6,000 workers between July and November 1986, to prevent their accounts from going under a further load of red ink. In 1978, the eight plants had a labor force of 30,000. Today, it is down to 10,000.

Nigeria's auto production has slumped greatly, as demand for locally produced vehicles is down to another all-time low. The government's austerity measures have further hurt business.

For example, VWON's Santana — Nigeria's prestige car — carries 30-percent customs duty plus an excise duty of 5 percent on retail. The total duties imposed on the car is 11,147 naira, bringing its retail price now to 41,464 naira.

Government duty on locally assembled cars is a big disadvantage to Nigeria's auto plants. Daniel Lange, chief executive of PAN, said, "Either the government rescinds these measures, or we begin to get set to permanently close down."

Government measures have given imported built-up units an advantage. Their prices are lower because they are exempted from the 5-percent excise duty imposed on locally assembled cars. This, coupled with the destructive notion that everything produced in Nigeria is of inferior quality, has put the local automakers in trouble. As a result, the few Nigerians with money to buy cars are turning to imported, built-up cars whose prices are lower than locally assembled cars.

To stem this, the local auto plants have adopted an aggressive and massive advertising policy. It is designed to drive home the point that "to kill the infant local auto plants is tantamount to throwing away the baby with the bathwater," to quote Utomi of VWON.

The local assemblers say in their advertisments that the depreciation of the naira and the excessive government taxes are responsible for the high cost of their products.

VWON, for example, said in one ad in January that 40 percent of its costs represent cost and freight, 35 percent administrative overheads and 25 percent customs, excise and port duties.

The company warned in the ad that if the government did not stop the unhealthy competition posed by FBU imports "The local automotive industry will grind to a halt before the middle of 1987."

It added, "We can decide to please foreign exporters...and forget the many short and long-term benefits of the local motor industry to the economy." The company has invested 421 million naira ($107 million SFEM) in Nigeria.

Nobody seems to listen. Some newspapers have turned hostile. In February, one influential magazine said the assembly plants were "a waste."

With their backs to the wall, Nigeria's automakers now foresee a grim future. Many will fold soon if the governmental attitude and economic adversities do not improve quickly enough. ■

Australia braces itself for terrible sales year

By Pedr Davis

Battered by the effects of the currency changes and some government-imposed problems, the Australian motor industry appears to be going down for the last time in a river of red ink. It also faces its worst sales year in two decades.

The problems have been highlighted by the latest statement from Mitsubishi Australia, which said it lost almost A$20 million ($14.5 million U.S.) in 1986, despite lifting its market share to a record 13.2 percent of passenger car sales.

Unhappily, three of the five firms committed to local manufacture lost money last year. It's likely a fourth will be deeply in the red this year as well.

GM-Holden's gained 20 percent of the passenger-car market — and lost an estimated A$100 million ($72.5 million U.S.). This is its fifth consecutive loss.

Nissan took 7.3 percent of the passenger-car market — and lost the equivalent of nearly A$16 million. It was also Nissan's fifth consecutive year of loss-making.

The two profit-makers have been Ford with 30.8 percent of the passenger-car market and Toyota with 14.9 percent.

However, Ford's profit fell from A$103.5 million 1985 to about A$20 million ($16.5 million U.S.) last year. AMI-Toyota has had three profitable years in a row, but the 1986 figure of A$4.3 million was half that of the previous year. It was losing money by the end of 1986.

Apart from Ford and Toyota, the industry has lost vast sums since 1980. Holden's total losses are now the equivalent of about A$450 million. Nissan's losses are close to A$60 million, and Mitsubishi's are about A$18 million.

Mitsubishi said its losses were caused by the impact of currency changes and the effect of other economic problems.

The entire industry is reeling from the blow of new government taxes. One is a fringe benefit tax, which makes an employer pay a special tax on any company car used by employees outside business hours.

A so-called luxury tax (raising sales tax from 20 to 30 percent) has also been added for all cars costing over A$30,000 — even 4wd wagons. This has dampened luxury-car sales.

Overall, the total 1986 car market was down by 23 percent compared with 1985. Up to the beginning of this month, sales figures were down by 24 percent compared with the same months in 1986. If the present slump continues, the industry will see its worst sales tally in 20 years.

The commercial-vehicle market has been hit even more severely than the passenger-car market, with sales down by 43 percent compared to the same period last year. ■

Bad times ahead for Europe's OE truck-component makers?

Over the next five to 10 years, survival will be in question for many of the hundreds of independent truck-component manufacturers in Europe. That's one of the general conclusions in a new report by Frost & Sullivan Inc., international market-research firm.

The report says truck output in Western Europe is expected to rise modestly over the next five years, with a dip in 1987-'88 because of a downturn in the replacement cycle.

The forecast for the original-equipment market reflects the anticipated modest growth in truck output.

The total value of component consumption by truck manufacturers in 1985 was an estimated $4.26 billion. The report predicts it will rise by 1991 — after a dip in 1988 — to around $4.6 billion in constant 1985 dollars.

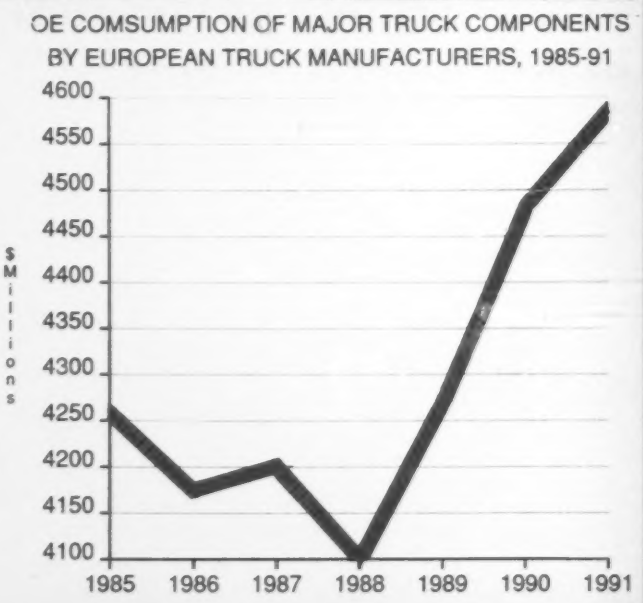
According to the report, this less-than-robust growth reflects problems in the European truck industry including: collapse of OPEC-country markets because of the drop in oil prices; slack demand in Europe; and overcapacity in Europe because of slack demand.

Because the European truck industry today can produce at least one-third more trucks than it can sell, the report predicts the number of truck "names" will decrease in the next few years.

Also forecast is a decline in the number of independent OE suppliers. Especially vulnerable are smaller companies, which can least withstand the pressure to achieve greater economies of scale through longer production runs, while at the same time being under pressure to improve the quality and sophistication of the components they make.

Among strategies for survival suggested in the report are: the development of products that are near-unique technologically; manufacturing several component types rather than just one; and forming "subassembly operations" to sell complete units to truck manufacturers.

In the components market, the report points out, there is still a strong emphasis on improvements to reduce vehicle fuel consumption through down-weighting and friction reduction, as well as on greater comfort and ease of handling. ■



WORLD NEWS BRIEFS

London hails new taxi

The fiberglass-bodied Metrocab, London's first new taxi design in more than 25 years, has been launched by Birmingham, England-based Metro-Cammell-Weymann Ltd.

The new cab is powered by a Ford 2.5-liter, direct-injection diesel engine used on the Ford Transit van. Ford is as also supplying specially adapted A4LD four-speed automatic transmissions with overdrive and lock-up torque converter. The adaption work was carried out by transmission specialist ATP of Staffordshire in consultation with Ford engineers.

MCW says its plant can supply up to half the 2,500 replacement London taxis purchased each year. The company also plans to offer the Metrocab throughout the rest of Britain, and has reported interest from taxi companies and owner-drivers in the Netherlands, Australia and Hong Kong.

Jaguar engineering center

The first phase of Jaguar's new $70-million engineering center in the Coventry, England, suburb of Whitley has been completed. Phase one includes styling buildings, which have now become fully operational.

The entire center will be completed late this year and will accommodate all of Jaguar's product engineering functions — including computer-aided design, drawing offices, engineering workshops, styling studios and administrative offices.

AR gets van contract

Austin Rover has won a major contract for the supply of Maestro City vans to British Telecom. The deal — Austin Rover's biggest van order ever from a single customer — could be worth more than $42 million at showroom prices.

The first batch of 1,200 vehicles will be delivered between April and September. Eventually, the communications giant could take up to 11,900 Maestro vans over an 18-month period. In addition, British Telecom is taking 400 Metro vans at a value of $2.5 million.

Agreement springs up

NHK Spring Co. Ltd., Yokohama, Japan, and Associated Spring, a unit of Barnes Group Inc., Bristol, Conn., are negotiating a valve-spring manufacturing technology licensing agreement.

According to William F. Fenoglio, Barnes Group president and chief operating officer: "They are leaders in their hemisphere, as we are in ours. We'll share manufacturing technology to produce the highest-quality valve springs anywhere in the world."

It's no blarney

Du Pont Co. is building facilities in Northern Ireland, which are expected to begin production of Kevlar aramid fibers early in 1988. Kevlar's uses include application in advanced-composite materials and as a replacement for asbestos in brakes, clutch facings, gaskets and plastics.

In 1985, Du Pont and Toray Industries established a joint venture to market Kevlar in Japan, with plans to provide production facilities there as the market for the fiber develops.

Mazda's painting robots

A motor-driven robot for painting vehicles, which can automate all stages of the painting process, has been developed by Mazda Motor Corp.

The design of the robot, according to Mazda, also eliminates the danger of spark emission, which can ignite volatile paint.

Mazda developed the painting robot jointly with Tokico Ltd., Kawasaki, Japan, a manufacturer of automobile components such as brakes, shock absorbers and hydraulic equipment. Tokico currently is supplying hydraulic robots for Mazda's new plant in Flat Rock, Mich.

Humans are still required for finish painting, which requires evenness of surface, according to Mazda.

Mazda said various types of the new robots for painting car bodies and other components will be introduced over the next few years. The motor-driven robot will be used in the Flat Rock plant when it starts production this fall.

Japan sets standards

The Japanese government has set aside funds in its official 1987 draft budget to establish, along with private organizations, a new research center for the "promotion of international harmonization of motor vehicle standards."

The Ministry of Transport has been working recently to standardize safety and pollution controls for imported vehicles. The Japanese government is involved in the Group of Experts on the Construction of Vehicles of the United Nations' Economic Commission for Europe (ECE. WP29). In line with these efforts, the ministry also sponsored an international symposium in Tokyo last December.

The new center will assist these activities with annual working expenses of about 150 million yen. Plans include an automobile regulations expert stationed in Geneva, Switzerland, to work closely with certain international organizations.

Mitsubishi shows a string of 4s

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Mitsubishi Motors Corp. has unveiled its new automobile steering system that integrates four-wheel drive, four-wheel steering and four-wheel independent suspension.

The integrated system, said to be the first of its kind, offers the driver greater vehicle stability and maneuverability under various road conditions, according to Mitsubishi.

It will be featured on the company's next generation of vehicles.

The improved fulltime 4wd, with an anti-lock braking system, features a combined center differential and viscous coupling unit in the transmission. This automatically regulates wheel spin and ensures equal distribution of traction to front and rear wheels, according to Mitsubishi.

The four-wheel steering system incorporates a hydraulically controlled rear-steering mechanism with a joint on the trailing arm of the newly developed four-wheel independent suspension system, an official said.

The function of the four-wheel steering is to make the rear wheels steer in the same direction as the front wheels at middle and high speeds (over 31 mph).

The system is operated by the hydraulic power cylinder that, according to Mitsubishi, is actuated by the oil pressure supplied to the rear-wheel oil pump. It is regulated by a control valve that is opened and closed by the front-wheel power steering oil pressure.

The rear-wheel oil pump supplies the oil in accordance with the revolutions of the rear wheels. Thus, according to Mitsubishi, the rear-wheel steering angle is controlled in proportion to vehicle speeds over 31 mph. Having the rear-wheel steering angle in proportion to the front steering effort can be obtained by means of the power steering oil pressure control valve.

Because steering effort is also determined by road conditions — the side forces generated on the front wheels change in accordance with road conditions — the rear-wheel steering angle becomes greater on dry roads to improve handling and stability, Mitsubishi said.

The rear-wheel steering angle becomes smaller on wet and snowy roads to enable the vehicle to turn more easily, the company said.

Steering response and safety are improved at speeds over 31 mph, while smooth maneuverability at low speeds is maintained, Mitsubishi said.

U.S.-car sales plunge 15% in early April

By Roger Rowand
AUTMOTIVE NEWS STAFF REPORTER

Cash rebates, cut-rate options, finance-rate reductions and a dash of spring weather failed to do the trick for domestic cars in early April.

The daily selling rate slid to 21,460 units from 31,373 in the final 10 days of March.

The sales rate for all of March was 26,235 cars a day.

Domestic-car sales for April 1-10 tumbled to 193,139, down 15.03 percent from 227,304 for the corresponding period last year.

Declines were reported by the four U.S.-based companies and by Volkswagen of America.

American Motors dealers saw sales plunge 55.31 percent below those in the year-earlier period. For Volkswagen, sales fell 41.11 percent.

General Motors dealers delivered 23.71 percent fewer cars in early April this year. Chrysler Motors points sold 11.83 fewer cars, and Ford Motor Co. deals sold 2.49 percent fewer units.

Honda's sales climbed 58.28 percent, and Nissan's rose 45.04 percent. Toyota, which did not sell U.S.-made cars in April 1986, sold 698 in early April this year.

A Ford Motor Co. market analyst said the early April results were about even with an annualized, adjusted sales trend.

70,000 seek jobs at Toyota plant

GEORGETOWN, Ky. — Kentucky has received about 70,000 applications for the 3,000 positions at Toyota's new Georgetown, Ky., assembly plant, and officials expect another 25,000 applications by September.

Kentucky officials are interviewing candidates for skilled trade jobs and expect that Toyota will hire about 300 trade workers for the plant's first shift. Production of a Camry model will begin in mid-1988.

A Toyota spokesman said group and team leaders (production supervisors) will be interviewed in May and June and hired by late summer. Team members (production workers) will be interviewed in late 1987 and hired in early 1988. Toyota said that 1,800 employees will be hired by mid-1988. That number will rise to 3,000 when the second shift is added at the end of 1989.

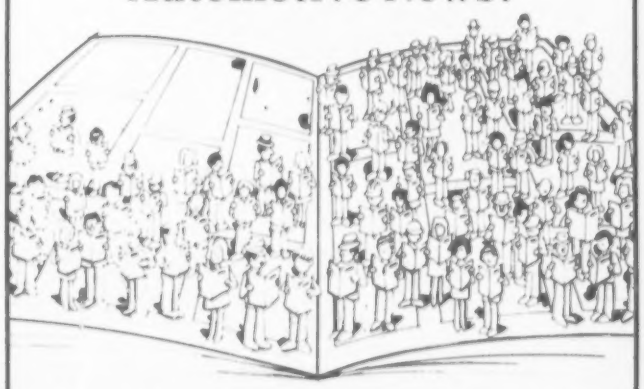
Metro Milwaukee Auto Auction. Sale every Wednesday. FMC, all leasing, AMC. 414-835-4436, Caledonia, Wisconsin.

Why rely on word-of mouth when you can build a crowd in the back of Automotive News?



Auction advertising builds strong auction traffic.

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you get a big regional — or even national — attendance with an ad in the Auction Directory.

The Automotive News Auction Directory is a tried-and-proven tool for auctions looking to build attendance or promote a special function. That's what keeps our auction advertisers coming back for more. More results. When you want results . . .

Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

PROXIES

FROM PAGE 1

In addition, each of the Big Three proposed shareholder resolutions to limit the liability of corporate directors. Other specific proxy issues discussed were:

GENERAL MOTORS

In addition to outlining GM's proposed new incentive plan, the proxy statement lists stock options received by GM executives and exercisable at a price of $68.32 in 1986. GM stock was trading around $86 last Friday. These options were distributed: Roger Smith, 21,100; Executive Vice President F. Alan Smith, 12,300; and Executive Vice President Donald J. Atwood, 11,500. No GM executive exercised stock options in 1986.

In other proxy materials, GM asked shareholders to approve a company proposal that would limit or eliminate the financial liability of directors in serving on the GM board.

Another shareholder proposal would prevent GM from buying stock at a price more than 5 percent above the current fair market price unless the same price is offered to all GM shareholders. The proposal stems from the $700 million-plus buyout of EDS founder H. Ross Perot last December.

Other shareholder proposals would force GM to stop all sales and licensing agreements in South Africa, though it has sold its subsidiary there; require GM to review its Northern Ireland operations in terms of equal employment and minority hiring; and require GM to stop trading with Communist countries.

GM said management opposes all shareholder proposals.

FORD

The Ford proxy showed healthy increases in salary-plus-bonus compensation for top executives: Petersen (36.4 percent), Poling (31.5 percent), Executive Vice President Philip E. Benton Jr. (35.5 percent) and Executive Vice President Ross (36.4 percent).

The 40 other Ford executive officers did not fare as well. They each averaged total 1986 compensation of $585,144, up just 6.9 percent.

Ford also reported that the company granted a total of 435,000 stock options at an exercise price of $53.69 per share to its 45 executive officers in 1986. Ford stock is currently trading around $85. Ford granted 22,000 each to Benton and Executive Vice President Allan D. Gilmour, 24,000 to Ross, 40,000 to Poling and 60,000 to Petersen.

The company said that two directors have reached the mandatory retirement age of 70 and will not stand for re-election. They are Carter L. Burgess, businessman and former U.S. ambassador to Argentina, and John B. Connally, Chapman Energy chairman and former governor of Texas.

Irvine O. Hockaday Jr., 50-year-old chairman and chief exeutive officer of Hallmark Cards, has been nominated to join the board.

One management proposal that will come before shareholders would limit the personal liability exposure of company directors.

There also are two shareholder proposals demanding the company withdrawal from South Africa, one seeking to limit corporate charitable contributions, one to terminate vehicle sales to the South African military and police, one to preclude contracts for the Strategic Defense Initiative or so-called Star Wars project, and one to impose condition on company stock repurchases.

CHRYSLER

Chrysler's proxy primarily dealt with executive compensation.

It said Iacocca's $20.5 million package included a $9.2 million stock grant negotiated in Iacocca's Dec. 8, 1983 contract. Iacocca received the 337,500 shares, valued at $25.92 per share, on Nov. 3, 1986.

At Chrysler, unlike Ford and GM, the announced bonuses were paid in 1986 on the basis of 1985 earnings.

The proxy also indicates that from Jan. 1, 1986 through Dec. 31, 1986 the following stock options were granted at an option price of $25.75 per share: Iacocca, 90,000 shares; Greenwald, 52,500 shares; Sperlich, 45,000 shares; Vice Chairman Bennett E. Bidwell, 45,000 shares; and Vice Chairman Robert S. Miller Jr., 37,500 shares. Chrysler stock traded around $35 late Friday.

The proxy also indicates Iacocca holds presently exercisable options, granted Dec. 8, 1983, on 675,000 shares at an option price of $12.42 per share. In addition, if Iacocca remains with the corporation in 1987, he:

- Will receive 112,500 shares Dec. 8, 1987.
- Will be able to exercise options granted Dec. 8, 1983 at an option price of $12.42 per share for 225,000 shares. They are exercisable Dec. 8, 1987.

In addition, Iacocca's contract signed Feb. 5, 1987, provides that if he remains with the corporation beyond his 65th birthday he will receive:

- 191,250 shares on Nov. 2, 1990;
- 63,750 shares on Dec. 8, 1991;
- Options for 540,000 shares at an option price of $33.50 per share, exercisable Dec. 8, 1990; and
- Options for 180,000 shares at $33.50 per share that will become exercisable Dec. 8, 1991.

In addition, Chrysler asked its 135,000 common stock shareholders to increase the number of shares of authorized common stock from 300 million to 500 million.

Another management proposal would eliminate or limit certain liabilities of directors.

The single stockholder proposal would, if approved, provide for cumulative voting in the election of directors. The company is opposing that proposal.

NOTE:GM bonuses include the value of stock awards, corporate contribution to stock-savings program and performance awards paid in 1987 based on 1986 performance. Ford salaries include corporate contribution to savings and stock investment plans; Ford bonuses are those paid in 1987 and 1988 based on 1986 performance. Chrysler bonuses are those paid in 1986 based on 1985 performance; totals also include corporate contributions in 1986 to employee savings plan and, for Iacocca, a stock grant paid in 1986. Value of stock options not included in any figures.

GM looking for profit, not share of market

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors will spend more on new products in 1986-1990 than in any five-year period in history. Despite the increase, the automaker will cut overall spending $10 billion by 1990.

GM executives also told a group of auto analysts that GM will, in that period, focus on profits instead of market share.

"GM is now in a strong position to provide maximum profitability," GM Chairman Roger B. Smith told analysts. "Maximum profitability may be best achieved at less production capacity than we currently have. That simply means a leaner, more productive workforce operating in fewer, but more modern and flexible manufacturing facilities, that can efficiently respond to volume and market-share fluctuations."

At the start of the 1987 model year, GM had said it would capture 42 percent of the U.S. car market. Executives now say GM's market share this year will be "around the 40 percent level." GM's car market share has been running 36 to 38 percent in recent months, a drop which GM executives described as temporary.

GM officers told analysts that automotive capital spending will average $6.5 billion annually from 1987 through 1990. That is about $3.5 billion below the average spending of 1985 and 1986.

At the same time, however, GM officials told analysts GM will spend $15 billion on new product programs during the 1986-to-1990 time frame, more than it ever has spent in a five-year period.

Earlier this year, GM told stockholders in a letter that it would slash expenses by $10 billion cumulatively through 1990. Of that amount, the letter outlined how $3.4 billion would be saved.

But GM executives told analysts how the entire $10 billion breaks out by groups within the company. They said that $4.4 billion of the cuts will come from the North American car groups, $2 billion from the truck and overseas group, $3.2 billion from component groups and $400 million from central office and technical staffs.

In the car groups, GM has cost-cutting programs called Project 2200 and Project 1800. The Buick-Oldsmobile-Cadillac Group has targeted $2,200 worth of costs to cut from each car; the Chevrolet-Pontiac-Canada Group has a goal of cutting $1,800 worth of costs from each car.

GM executives told analysts they have no plans now to close any more plants than than those already announced. GM has announced the closings of nine assembly plants and parts of two others. It also has said it will close a components plant in Detroit and has put another components plant in Ohio up for sale.

However, analysts were told that individual component operations are being scrutinized for profitability.

GM executives also told analysts that the automaker will not have to borrow money to repurchase its stock, as many analysts had predicted. GM has said it will buy back up to 20 percent of its common stock by 1990 to boost the value of its outstanding shares. The program could cost the company about $5 billion.

GM Treasurer Leon K. Krain explained in an interview following the analysts' meeting that part of the buyback will be funded by a nearly $1 billion dividend paid to GM by its finance subsidiary, General Motors Acceptance Corp.

Historically, GMAC has paid half of its profit to GM as a dividend, Krain said. GMAC paid a $750 million dividend to GM in 1983, $700 million in 1984, $100 million in 1985 and no dividend in 1986 despite its record $1.2 billion profit.

GM said GMAC will be able to pay a large dividend this year because its borrowing costs will be lower.

GM also will receive a $900 million federal tax refund this year.

The two-day analysts' meeting consisted of a tour of GM's Linden, N.J., assembly plant where the Chevrolet Corsica and Beretta are produced, and sessions with more than 40 of GM's top executives, including Smith, who did not attend last year's meeting.

PROFITS

FROM PAGE 1

Chrysler will report earnings next week.

Based on an average of forecasts by auto analysts, the Big Three will report combined earnings of $2.21 billion for the first quarter, compared with $2.15 billion in the year-ago period. Combined earnings for the year are expected to be about $6.70 billion, down some 12 percent from $7.64 billion in 1986.

However, the first-quarter reports of GM and Ford are expected to be the reverse of last year's first quarter.

GM is expected to report profits of about $770 million for the first quarter of 1987. That would be down 27 percent from the $1.06 billion earned in the first quarter of 1986 and would mark the first time since 1983 that GM earned less than $1 billion in the first quarter.

The lower profits are due to the lower sales volume that has caused GM to scale back production.

However, GM Chairman Roger B. Smith told auto analysts that first-quarter profits would exceed the consensus of analysts' forecasts. Before the recent meeting, the consensus was that GM would earn just under $700 million.

Following the meeting, some analysts revised their GM forecasts for the first quarter.

Smith said the overseas group should contribute to the company's 1987 earnings after reporting a loss of $550 million in 1986.

Smith told analysts that GM's overseas market penetration has increased and the European outlook is optimistic. In addition, GM noted that in 1986, six overseas operations that were not "financially viable" were sold, liquidated or restructured, which will save GM an anticipated $100-million-plus annually.

Ford, meanwhile, is expected to report record profits of $1.15 billion for the first quarter of 1987. That would be a 58 percent increase over 1986's first-quarter profits of $728 million and would mark the first time in history that Ford hit the billion-dollar mark in the first quarter. It would also be Ford's best-ever quarter, topping the $1.08 billion earned in the second quarter of 1986.

Analysts estimate that Ford will earn less in 1987 than it did in 1986. Nevertheless, Ford is expected to out-earn GM again this year.

For the year, analysts predict Ford will earn $3.05 billion, down 7 percent from the record $3.29 billion it earned in 1986. It would be Ford's second-best year ever.

GM, meanwhile, is expected to earn $2.45 billion, down 17 percent from last year's $2.95 billion.

Chrysler is expected to report first-quarter earnings of about $286 million, down 20 percent from $357 million in the first quarter last year. For the year, Chrysler's earnings will be about $1.2 billion, based on analysts forecasts, down 14 percent from 1986's $1.4 billion.

EARNINGS FORECAST
averages from 10 auto analysts, in millions*

	GM	Ford	Chrysler	Big Three
1st Quarter 1987*	$ 770	$1,150	$ 258	$2,210
1st Quarter 1986	$1,060	$ 728	$ 357	$2,150
All of 1987*	$2,450	$3,050	$1,170	$6,700
All of 1986	$2,950	$3,290	$1,400	$7,640

PRODUCTION

Holiday trims auto output

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

With no Saturday overtime and only four working days because of the Easter holiday, last week's scheduled domestic auto production dipped considerably from the prior week's build.

Scheduled output of 129,544 cars was 20.31 percent below the previous week's 162,550 and 20.27 percent below the year-ago week's 162,475.

So far this year, 2,368,592 cars have been assembled, 9.08 percent below the 2,605,125 completed last year at this point.

Last week's targeted production was shared as follows: General Motors, 50.48 percent; Ford Motor Co., 26.64 percent; Chrysler Motors, 12.35; Honda of America Manufacturing Inc., 4.11 percent; New United Motor Manufacturing Inc., 2.47 percent; Nissan Motor Manufacturing Co. U.S.A., 2.25 percent; Volkswagen of America, 1.24 percent; and American Motors, 0.46 percent.

GM's Oklahoma City plant was idle last week for inventory adjustment. The plant is expected to resume production tomorrow (April 21).

As previously reported, production at GM's Flint, Mich., plant has been cut to four days a week with two eight-hour shifts daily, effective today.

GM's Lakewood, Ga., assembly plant remains down for model changeover. The plant is expected to resume operations in early May.

Chrysler's Belvidere, Ill., plant is idle for changeover to the full-sized Chrysler New Yorker and the new Dodge Dynasty. The plant has been down since March 9 and is expected to resume production in early July.

All plants were closed last Friday (April 17) because of the Easter holiday.

Ford has slated daily overtime this week at all car plants.

Saturday (April 25) overtime is scheduled for Ford's Dearborn, Mich., and Lorain, Ohio, plants.

63,410 trucks built in short week

U.S. truck manufacturers targeted production of 63,410 units last week, 21.32 percent below the previous week's build of 80,594. The plants worked only four days last week because of the Easter holiday.

Last week's scheduled output was 16.42 percent below the year-ago week's 75,864.

No Saturday (April '8) overtime was scheduled because of the Easter holiday.

Daily overtime is slated for all Ford plants this week (April 20).

GM return hikes Canada car total

Canadian automakers planned to build 14,644 cars last week, 21.16 percent more than the previous week's 12,086. Three General Motors plants were closed the previous week;one returned to work last week.

Assembly plants worked only four days last week because of the Easter holiday. The week's car output was 42.37 percent below last year's 25,412.

So far this year, 251,428 cars have been assembled, 28.26 percent below the 350,490 completed last year at this point.

Truck production was scheduled at 14,357 units last week, 21.55 percent below the prior week's 18,-300 and 26.90 percent below the year-ago week's 19,639.

GM's Oshawa, Ontario, (No. 1) car plant resumed production last week (April 13). The plant had been idle for one week to adjust inventory.

GM's Oshawa, Ontario, (No. 2) car plant remains down for conversion to the new GM10 cars.

The GM Ste. Therese, Quebec, plant will be idle until May 18 for model changeover.

Chevrolet to miss 1987 sales target

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Chevrolet will not top the 3-million sales mark as predicted at the start of the model year, but it will be close.

Chevrolet General Manager Robert Burger had predicted at the start of the model year that Chevrolet would sell 3.1 million vehicles. He said last week that the division's car sales will not reach the 1.8 million units predicted at the start of the model year. But truck sales will hit their target of 1.3 million or more for a sales total of 2.9 million vehicles, he said.

Burger said it is unlikely that, during the remainder of the model year, the division will be able to make up for the the last quarter of the 1986 and January, which were below forecasts.

Speaking at a press conference before the opening of the Greater New York International Automobile Show, Burger said that much of the burden for boosting General Motors' share of the car market rests on the shoulders of Chevrolet.

For GM to capture 40 percent of the market for the calendar year, as GM executives hope, Chevrolet will have to have a monthly market share of 16 to 16.5 percent for the remainder of the year, he said. Chevrolet's market share was 16 percent in the 1986 model year and the division had hoped to increase its penetration by a full percentage point with the addition of the Corsica and Beretta.

GM's market share in recent months has been running at about 36 to 38 percent.

"I would suspect that for GM to get to 40 percent for the balance of the year is a real tough assignment," Burger said. "With three or four months behind us, we're down 3 percentage points from that number, so that means we'd have to travel at considerably over 40 percent for the balance of the year."

But, he said, with the the Corsica and Beretta and more aggressive incentives than GM had on its cars in the early months of the model year, "we have a good shot at getting 40 percent."

Burger said he expects GM to match competitors on incentives through the rest of the year.

"We'll be as aggressive as anyone out there," he said. "We went for three months of the model year — October, November and December (1986) — practically naked on incentives if you compare us to some of the domestic manufacturers. It has not been until the last 45 days that we have been across-the-board competitive throughout GM. For the rest of the year, we'll be right there doing what the rest of the industry does."

Burger said Chevrolet would offer incentives on Corsica and Beretta only if dealer inventories get too high.

Chevrolet has received 180,000 dealer orders for the Corsica and Beretta. That represents 70 percent of the models that can be built through September.

Dealers report that showroom traffic is up a third because of the new cars. Chevrolet is expecting as many as 5 million potential customers to head to Chevy showrooms because of the Procter & Gamble Co. promotion, which kicks off April 25 and will involve the giveaway of 750 Corsicas, Berettas and 1988 C/K pickups.

Non-union auto parts may spark Canada fight

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

TORONTO — In a move that could have a major impact on auto industry outsourcing, Canadian Auto Workers President Robert White is urging union members to refuse to handle parts made by non-union workers.

White's move to fight the growth of non-union suppliers came during the union's first collective bargaining convention last week. It is in line with the CAW program of fostering grassroots responsibility and action — which was the spirited convention's underlying theme.

Canadian-auto workers, unlike those in the United States, don't have a right to strike in mid-contract. But following the lead of Local 444 in Windsor, Ontario, which has blocked — or at least delayed — planned outsourcing of seats by Chrysler Canada to Markham, Ontario-based Magna International, White said locals should put automakers on notice that workers will refuse to install parts from non-union suppliers.

Basil Hargrove, an assistant to White, said, "No one is saying this is legal. But the labor movement was not built on legalities."

A spokesman for Chrysler Canada said the planned outsourcing to Magna was "put on hold. There's no change contemplated. At this point it's going to be a contract issue."

White told the delegates a similar struggle is beginning at Local 676, representing production

WAIT: *Investors, dealers speculate amid delays in Chrysler-AMC deal*

By Laura Clark and Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTERS

Wall Street speculated heavily on American Motors stock as Chrysler Corp. and Regie Nationale des Usines Renault finalized terms of AMC's sale and anxious dealers and investors waited to determine the winners and losers.

An announcement completing the deal is expected within two weeks. Sources in Paris said Renault directors will be updated on the sale of its 44.84 percent of AMC stock at a Tuesday (April 28) board meeting. Chrysler and Renault last week again extended their deadline for finalizing the deal.

Several key AMC board members — including former chairman Roy D. Chapin Jr., former chairman Paul Tippett and Shearson Lehman Brothers Managing Director Andrew G.C. Sage II — met with legal and investment advisers in New York. Senior Chrysler officials also attended those meetings. AMC watchers speculated that AMC could ask Chrysler to sweeten its bid for AMC stock, possibly going from the announced $4 bid to as high as $4.50 per share.

Chrysler and Renault officials also were

Patent war looms over steering

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — A battle royal is threatening to embroil the Japanese auto industry over patents to the various four-wheel steering (4ws) systems planned for export to the United States.

Toyota Motor Corp., Nissan Motor Co. and Mazda Motor Corp. have filed objections with the Japanese government to Honda Motor Co.'s applications for patents on a 4ws system. In turn, Honda has filed infringement complaints against those companies.

Those four automakers and Mitsubishi Motors Corp. have developed 4ws systems that turn and steer the rear wheels of a vehicle in the same or opposite direction as the front wheels (depending on speed). The 4ws system improves stability, facilitates maneuverability and provides easier cornering and parking.

Honda and Mazda plan to offer 4ws on their 1988 models that will be sold later this year in the United States (related story on Page 42).

A spokesman for the U.S. patent office said the dispute over the Japanese patent will not prevent any of the manufacturers from selling 4ws models in the United States.

"It's not based on reciprocity" with the Japanese patent system, the spokesman said of the U.S. patent system. "If they are doing business in the U.S. they have to file a U.S. patent to be protected. If no one else filed a patent, anyone can duplicate the system and sell it, but they could not file a patent on it. Only the inventor can file."

Likewise, any challenges affecting products sold in the United States would have to be filed in the United States. A patent violation would not be cause to keep cars out of the United States; instead, the issue would have to be litigated in U.S. courts after vehicles landed stateside.

In addition to Honda's U.S. patents, a spokesman for Mazda's American unit said its parent company has patents pending in the United States for its system. Spokesmen for both companies said they knew

LAMBO

Italian firm to grow; $70,000 2-seater due for Chrysler dealers

By Giancarlo Perini
STAFF CORRESPONDENT

SANT'AGATA BOLOGNESE, Italy — Chrysler Motors' outright purchase of Italian exotic-car maker Lamborghini will result in production of a new $70,000 sports two-seater that will be sold by dealers in the United States in about three years.

The car, a likely replacement for the present Jalpa, is part of a broad plan that will lift Lamborghini's annual volume to between 4,000 and 5,000 units during the next five years.

It signifies a major expansion for Lamborghini, whose annual production has never exceeded 650 vehicles. The plan is to make Lamborghini a serious rival to Ferrari in the exotic-car market. Ferrari manufactured a record 3,640 cars last year.

Chrysler's most expensive model will now be Lamborghini Countach, a $127,000 beauty.

The ceremonial signing of the agreement took place last Thursday (April 23). It was signed by Gerald Greenwald, chairman of Chrysler Motors, and Patrick Mimran, the senior of the Mimran brothers who have owned Nuova Automobili F. Lamborghini S.p.A. since 1980.

The open-air signing in front of the

Domestic dealer count dips; import duals climb

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

The number of dealerships handling domestic makes of cars declined again in the first quarter of 1987.

The latest Automotive News census counted 20,359 such outlets on April 1, down 46 from the 20,405 in operation at the beginning of this year. The dip was almost twice as high as in the first quarter of 1986, when 25 stores faded away.

And as the number of domestic-car outlets dropped, the number dualed with imports increased.

At the beginning of this year, some 13,000 of the 20,405 dealerships in the domestic census also handled an import — about 64 percent. During the quarter, the total of import-allied domestic deals grew to nearly 14,200, or 70 percent, principally because Renault retailers returned to the import scene with Medallion. American Motors was not importing any Renaults at the beginning of the year.

Ford will begin phasing in the Festiva in May and will complete the process by the end of September. All 4,600 Ford Division outlets then will be selling imported cars. That will bring the number of do-

Nova production trimmed as dealer stocks grow

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The General Motors-Toyota joint-venture plant will cut production from May through the end of the model year because of slow sales and high inventories.

The New United Motor Manufacturing Inc. plant in Fremont, Calif. will reduce output of the Chevrolet Nova by 50 cars a day to 600 cars a day for the balance of the 1987 model year, which ends Sept. 30.

Inventories as of April 1 reached 132 days' supply when 60 to 80 days is normal. Nova sales for the model year to date have been down about 20 percent from the same period in the 1986 model year.

Chevrolet General Manager Robert Burger had predicted at the start of the model year that the division would sell 180,000 Novas compared with 171,000 in the 1986 model year. In addition to the Corsica and Beretta, the Nova was the only other line in which Chevrolet expected to see a sales increase.

However, that has not happened and Chevy has scaled back its initial car sales forecast.

The subcompact segment in which the Nova competes has been bombarded with competition not only from the Japanese but also from South Korean producers.

A NUMMI spokesman said that the reduced production schedule will not require layoffs. Workers impacted by the production cut will be put in Kaizen groups — workers who study how the assembly process can be improved. They will move back to the assembly line as attrition occurs.

The production cut will not affect assembly of the Toyota FX and FX-16, which are also built at the NUMMI plant. The plant builds 150 cars a day for Toyota.

The cut of the Nova build is the largest since the plant hit full capacity in April 1985. In its only other cut, NUMMI scaled back Nova production by 10 cars a day last July before the start of the 1987 model year.

The reduction in Nova production comes in spite of the fact that Chevrolet recently received a fleet order from daily rental car companies for 46,000 Novas. Chevrolet said it is the division's largest fleet order ever and maybe the largest ever in the industry. Chevrolet offered the rental companies special incentives on the Nova.

NUMMI said it will be able to fill the order by the end of the model year despite the production cutback.

On the retail side, the Nova has had a $750 cash rebate incentive on it, which expires April 30. There are no plan now to extend the incentives.

SATURN

GM's upward-looking auto project on schedule in its earth-and-stone phase

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

SPRING HILL, Tenn. — The building of Saturn, the project to redefine the car-making universe for General Motors, is posing some earthly challenges in the early stages of plant construction.

Since work began on the site a year ago, the bulk of the task has been to lower the middle Tennessee hills and fill the valleys into a one-mile-long, half-mile-wide stone base for the complex.

Last fall, 400 workers began exploding, hauling, dumping, smashing, rolling and otherwise altering nearly three million cubic yards of limestone into shape. Construction crews have been going at it six days a week. Each night, portable lights illuminate the grounds, allowing the second shift to work until 1 a.m.

This phase is expected to wind up by mid-May, and then the cement — produced on site from materials from Saturn's own quarry — will be poured to form each building's foundation.

This summer, the steel is expected to rise and the powertrain building will begin taking form. Buildings for the stamping and assembly operations will follow.

Aside from last fall's announced scaleback of Saturn's initial plant size and car output, the project is still on its original schedule, Saturn officials say.

Officials with the construction management and engineering firms hired by Saturn confirmed that the timetable is being met, as did independent construction and labor sources in the area. Awards for the initial foundation work are expected to be granted within two weeks.

AUTOMOTIVE NEWS/JOE WILSKERS PHOTOS

After limestone is excavated from a Saturn site quarry, it is crushed to be used in concrete for the plant foundation

Construction crews drill an area that will be cleared with explosives

A year from now, construction will be nearing its peak, with 2,500 workers on site. And in two years, the plant should be finished. By 1990, when production is expected to begin, Spring Hill will be an auto town.

For a community that was supposed to have been transformed forever with the 1985 selection of the Saturn site, there's been surprisingly little growth in Spring Hill, local observers say.

The expected economic windfall hasn't materialized — in fact, the city's commercial base has declined. Main Street may be freshly paved, but many retail mainstays — a grocery, gas station and hardware store, for example — have closed since the announcement of Saturn's arrival.

Much of that can be blamed on the speculators, whose fervor matched the hype surrounding the nationwide bidding for the $3.5 billion project.

"In the beginning, we had people going up and down the highway and taking options (to buy property) with anyone who was willing to sign one," said Waymon L. Hickman, president of First Farmers and Merchants National Bank in nearby Columbia.

Real estate agents recall how investors came in from across the country, in one instance snapping up what was a $200,000 home for 10 times that price. Some businesses took the offers, shut their doors and set up shop in nearby towns. Later on, some of the newcomers realized their overexuberance and let go of their properties at a loss.

Things have quieted since the initial frenzy. Real estate agents report that homes are typically selling for 1½ times the prices they brought before Saturn — when they sell. Part of that increase has been attributed to the economic growth that has reached south of Nashville toward Spring Hill, 35 miles away.

Some sobering news has also come into play. The scaleback from 6,000 to 3,000 initial jobs and 500,000 to 240,000 annual car output has done much to temper the enthusiasm over Saturn. Skeptics question whether the project will ever get off the ground. In addition, news of GM's plant closings and subpar earnings performance has also spawned doubts.

For the most part, though, those are distant concerns. Speculative activity has given way to projects with substance — not just in Spring Hill but throughout Maury County and beyond.

In Spring Hill, work has begun on the multimillion-dollar Town Center project, which will provide a hotel, multi-family housing and a new city hall and create some sorely missed retail outlets.

Real estate agents expect activity to pick up as the plant proceeds and as more employees and suppliers move into the area. Currently, there are just seven full-time Saturn workers and four UAW officials on the job in Spring Hill.

In some eyes, even the scaleback is viewed as a blessing. A 6,000-employee plant producing 500,000 cars annually could have been too much for the area to digest at once. Rural Tennessee may not compare to an overextended Houston during the oil boom, but there is some agreement that breathtaking growth can have ugly consequences.

The second phase of Saturn would roughly double the car output, the number of employees and the size of the complex. But the go-ahead for that will hinge on the demand for the car.

Senate approves tougher vehicle-safety rules

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Senate unanimously passed and sent to the House a package of vehicle-safety bills that includes stiffer requirements for multipurpose vehicles. The bills also give NHTSA authority to spend appropriated funds for fiscal 1988 and 1989.

Among provisions of the Senate-passed legislation:

- NHTSA would be required to extend four car safety standards — roof crush strength, head restraints, high-mounted rear stoplamp and passive restraints for outboard front seats — to multipurpose passenger vehicles, or vans.
- NHTSA would be required to improve the side-impact protection standard for cars and work toward extending it to multipurpose vehicles.
- The National Academy of Sciences would be requested to create a uniform numerical rating system enabling consumers to compare the crashworthiness of cars. Then NHTSA would decide whether to write regulations based on the Science Academy's recommendation and public comments.
- NHTSA would be required to ensure that some vehicles are tested for all safety standards, and set schedules for compliance and penalties for non-compliance with safety standards.
- NHTSA would be required to order the phase-in of lap/shoulder belts for rear outboard seats, half by 1990 models and the rest by 1991 models.
- Automakers would be required to certify and label cars with the impact speed at which their bumpers will protect the vehicle from damage.
- The Science Academy would be required to study state vehicle-inspection programs.
- Under the bill's recall section, lessors would have to notify lessees about defects, and dealers would have to repair defects before sale.
- NHTSA would have to study the safety aspects of darkened windshields and windows in cars.
- States would be allowed to registering a vehicle only if the application for registration contained an odometer reading.

Among provisions of the Senate-passed legislation: NHTSA would be required to improve the side-impact protection standard for cars.

During the last Congress, both the House and Senate passed similar bills to this one, but the legislation died because a compromise could not be reached.

EARNINGS

GM profits drop 23%; cost-cutting speeded

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors, in announcing lower first-quarter sales and profits, said it is speeding up its cost-cutting efforts.

GM reported first-quarter earnings of $922 million, down 23 percent from $1.2 billion in the first quarter of 1986.

GM earnings were considerably higher than auto analysts had projected. The consensus of analysts surveyed by Automotive News was that GM earnings would be $770 million. The quarter marked the first time since 1983 that GM earned less than $1 billion in the first quarter.

On a per-share basis, GM earnings amounted to $2.62 a share compared with $3.52 in the year-earlier quarter.

Operating income dropped about 50 percent, to $687 million from $1.4 billion.

GM sales in the first quarter totaled $26.1 billion, down 3 percent from $26.8 billion in the first quarter of 1986. Earnings as a percent of sales fell to 3.5 percent in the quarter from 4.5 percent a year ago.

GM Chairman Roger B. Smith and President F. James McDonald said in the company's earnings statement that GM is accelerating its programs to reduce staff expense, phase out uncompetitive or obsolete component manufacturing operations and improve manufacturing and assembly plant efficiencies.

A GM spokesman said the company will try to accomplish the cost-cutting efforts it already has set in motion before the previously set target dates.

GM has said it will close nine assembly and stamping plants and portions of two others and will cut its salaried workforce 25 percent by 1989. The automaker also has announced the closing or sale of some component operations and more are expected to be named in the next six to nine months. GM also has promised to cut expenses by $10 billion by 1989.

GM executives have said they have determined that component operations amounting to about 10 percent of overall component sales are not competitive and have little chance of becoming competitive, so they will be closed or sold.

Smith and McDonald noted that the rise of the Japanese yen against the U.S. dollar has caused the Japanese to concentrate on cost cutting. "We must respond to the challenge by continuing to design and build attractive, quality cars — and do so at the lowest possible price," they said.

During the quarter, GM's worldwide factory sales to dealers totaled 2,093,000 vehicles, down 10 percent from the first three months of 1986. GM attributed the sales drop to strong competition, which prompted GM to cut North American production in order to reduce inventories. During the quarter, GM also offered sales-incentive programs that adversely affected results.

In addition, GM said the start-up operations at five North American car and truck assembly plants adversely affected first-quarter performance.

GM said earnings were favorably impacted by "efficiencies generated by cost improvement programs" and record earnings from General Motors Acceptance Corp.

GM's earnings statement, however, showed that total costs and expenses for the quarter remained at the same level as in the first quarter of 1986. However, the average number of employees dropped to 847,000 from 901,000.

GM also had a lower tax bill. This year, GM paid $71.9 million in income taxes compared with $475.2 million in the first quarter of 1986. GM said it will receive a $900 million tax refund in 1987.

GM's working capital position improved, but it apparently was because of a loan from GMAC. On March 31, GM's working capital amounted to $7.4 billion compared with $3.9 billion on Dec. 31, 1986. During the quarter, GM borrowed $3.4 billion from GMAC under a five-year agreement whereby GMAC will loan up to $12 billion to its parent company. To date, GM has borrowed $8.6 billion of the $12 billion.

GMAC also paid its parent a $300 million dividend on March 31. GM previously said that GMAC will pay nearly $1 billion in dividends to its parent company during 1987 after paying no dividend to GM in 1986 despite record earnings. Historically, GMAC has paid about half of its earnings to GM as a dividend.

GMAC earned $481 million in the first quarter, a 74 percent increase over 1986 first-quarter profits of $277 million. It was GMAC's best quarter ever. GMAC's earnings included $68 million resulting from a change in depreciation accounting.

GMAC Chairman John R. Edman attributed the finance subsidiary's record profits to lower borrowing costs and a higher level of average earning assets. Short-term borrowing costs for the first quarter amounted to 6.18 percent, down from 7.84 percent for the comparable 1986 period.

GMAC financed 540,000 new cars and trucks in the United States, or about 44 percent of the vehicles sold by GM's U.S. dealers. It also financed 106,000 vehicles outside of the United States.

In the first quarter of 1986, GMAC financed 793,000 vehicles in the United States, or about 53 percent of vehicles sold by GM dealers. A wide range of incentives during the first quarter of 1986 resulted in the highest volume of vehicles financed by GMAC in a first quarter.

The dollar volume of GMAC's retail-vehicle financing totaled $8.8 billion, down from $12.2 billion in the first quarter of 1986 when more special-rate finance programs were in effect.

Total finance receivables outstanding as of March 31 totaled $81.9 billion, compared with $81.8 billion on March 31, 1986. Retail and lease financing receivables totaled $65.3 billion, and wholesale receivables, primarily dealer inventory financing, amounted to $12.6 billion.

GM's computer subsidiary, Electronic Data Systems Corp., reported net income of $65 million in the first quarter, up 16 percent from the $56 million earned in the year-earlier period.

On a per-share basis, EDS made 53 cents in the first quarter compared with 46 cents in the year-ago quarter.

Quarterly revenues increased 4 percent to $1.04 billion from $997 million in the first quarter of 1986. Of the total, sales to GM dipped 2 percent to $720 million in the first quarter compared with $736 million in the first quarter of 1986.

GM Hughes Electronics Corp. reported net income of $138 million for the first quarter. That compares with $116 million in the same quarter a year ago on a restated basis. GMHE also restated earnings to reflect a new accounting procedure for pensions. Net income for the first quarter of 1986 was $100 million before being re-stated.

Earnings without items associated with GM's purchase of Hughes Aircraft Co., including goodwill payments to Hughes, totaled $175 million, up 14 percent from $153 million. Dividend payouts for Class H stock is based upon earnings excluding those items.

Earnings per share were the subsidiary's best for any quarter at 88 cents for the first quarter, compared with 77 cents in the year-ago period.

GMHE sales amounted to $2.7 billion, up 4 percent from $2.6 billion a year ago. Sales to GM and its affiliates totaled $873 million in the first quarter compared with $802 million in the same period last year.

AMC is on a roll; posts 2nd profitable quarter

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — American Motors, on the verge of being acquired by Chrysler Corp., reported its best first quarter since 1979 with a profit of $23.4 million on sales of $1.1 billion.

That compares with a loss of $18.9 million on sales of $918 million in the first quarter of 1986. AMC earned 12 cents per share, compared with a loss of 20 cents per share or the year-earlier period.

The first-quarter profit followed a $20.0 million profit in the fourth quarter of 1986. The back-to-back quarterly profits were the first since 1984 when profits were significantly less than in the past two quarters.

The 1987 period resulted in AMC's best first-quarter earnings since 1979 when it earned $32.0 million. It was the best-ever first quarter in terms of sales, with $1.1 billion.

AMC President Joseph E. Cappy said the company's improved performance was due to increased Jeep sales, a strengthened passenger-car line with the introduction of the Renault Medallion in March, improved operating margins and the continuation of improved manufacturing efficiencies.

He noted that the profit was achieved despite start-up costs associated with the new Bramalea, Ontario, assembly plant, where AMC will produce the intermediate-sized Premier, and provisions for employee profit sharing during the quarter.

North American vehicle sales totaled 77,012 for the first quarter, compared with 70,173 for the year-earlier period. They included 18,380 car sales and 58,632 Jeep sales this year. That compares with 17,011 car sales and 53,162 Jeep sales in the year-ago quarter.

Outside North America, AMC sold 5,927 vehicles, down from 7,249 in the first quarter of 1986. AMC sold 190 cars and 5,737 Jeeps outside North America during the quarter. That compares with 1,601 cars and 5,648 Jeeps in the year-ago quarter.

Honda blames yen gain as profits plunge 43%

TOKYO — Honda Motor Co. Ltd. reported a 43 percent drop in earnings for the fiscal year ended Feb. 28 because of the strengthening Japanese yen.

Honda said net income for the fiscal year amounted to $547 million, down 43 percent from the previous fiscal year. Sales totaled $18.7 billion, down 1 percent.

Honda said sales in its home market were up 7 percent because of an increase in sales of cars and parts and other revenues. The company said that its overseas subsidiaries had increased sales in their local currencies, but overseas revenue dropped because of the strengthening Japanese yen.

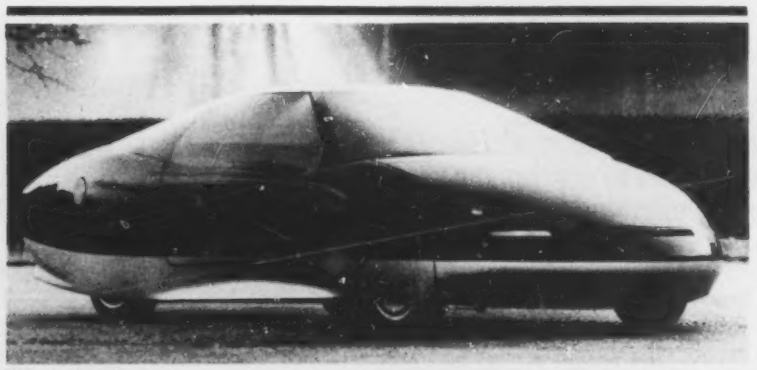
By product segment, Honda said car sales were $13.1 billion, up 9 percent, mainly because of stronger Japanese sales and a restructuring of the Japanese dealer network. U.S. sales increased with the expansion of local production capacity and a sustained demand for Honda cars, Honda said. Car sales in Europe also rose.

Motorcycle sales amounted to $2.0 billion, down 27 percent, because of sales declines in overseas markets, especially North America. Sales of power products totaled $1.1 billion, down 35 percent. Honda said power-product sales increased in Japan but declined overseas because of lower sales of all-terrain vehicles. Parts sales and other revenue totaled $2.6 billion, the same as the previous year.

Of total sales revenue, 69.7 percent came from automobiles, up 6.4 percent; 10.5 percent came from motorcycles, down 3.7 percent; 5.7 percent came from power products, down 2.9 percent; and 14.1 percent came from parts and other sources, the same as last year.

For the fourth fiscal quarter, Honda reported net income of $132 million, down 33 percent from the year-earlier fourth quarter. Sales totaled $5.0 billion, up 3 percent.

By product segment for the quarter, Honda had car sales of $3.7 billion, down 15 percent; motorcycle sales totaled $348 million, down 34 percent; sales of power products amounted to $347 million, down 20 percent; and sales of parts and other revenue were $643 million, up 1 percent.



Wind cheater
Chevrolet says its Aero 2003A research vehicle has the lowest coefficient of drag (0.166) of any driveable vehicle in the world. The vehicle has wheel skirts, a hydraulic height-adjustment system, hidden wipers, peripheral inside mirrors and a smooth underbody. The engine is a 2.8-liter 60-degree transversely mounted V-6 with electronic fuel injection. A low-profile radiator that receives air through a large duct in the nose panel helps to lower Aero 2003A's nose.

Mid-April sales up 3%

Sales of new cars built in the United States perked up a bit in mid-April. There was also an improvement in the daily selling rate.

Sales of the eight companies now selling U.S.-made cars totaled 201,141 units for April 11-20, up 3.80 percent from 193,772 last year.

The daily selling rate climbed from that of the preceding 10-day period, although it trailed the rate for March.

The mid-April rate rose to 25,143 cars a day from 21,460 for the first 10 days of this month and 24,222 for April 11-20 last year. The daily selling rate was 26,235 for all of March and 24,215 for all of February, according to an Automotive News analysis.

In mid-April, Nissan dealers delivered a robust 206.99 percent more cars than they did a year earlier. Honda's sales were up 77.75 percent and Ford Motor Co.'s rose 28.69 percent.

Losers in the period were American Motors with a drop of 55.31 percent from last year; Volkswagen with a decline of 30.66 percent; Chrysler Motors with a fall-off of 6.92 percent; and General Motors with a dip of 7.83 percent.

"The Letter"

Invitation elicits anger from fleet managers, apology from Runzheimer International

By Geoff Sundstrom

Professional fleet managers will be trading opinions on a number of controversial topics at NAFA's annual conference this week. But nothing is expected to top the controversy over "the letter."

"The letter" was a promotional mailing sent to the chief executive officers of numerous fleet managers by Runzheimer International, Rochester, Wis.

According to NAFA's December newsletter, the Runzheimer letter "invited CEOs to a seminar designed to show 'a few ways to put your company cars on a sound financial footing.' "

The Runzheimer letter said: "Please don't send your fleet manager. Send someone with your authority or come yourself. Only you are equipped to make the kinds of decisions that can solve your fleet problems."

Runzheimer sells research and services to companies who reimburse drivers of employee-owned vehicles. The firm's newsletter for fleet managers, *Runzheimer Reports on Transportation*, is widely read in the industry.

The letter sent shock-waves through NAFA's membership when it was distributed late last year. NAFA was established, in part, to heighten the professional image and management skills of fleet administrators.

Said NAFA president Helen Bland: "I was very upset, because I got one of the letters. It went to our CEO, and he just sent it down to me."

Bland continued: "Not only was I upset, but there were many dozens and dozens of fleet managers whose CEOs got the letter. I wrote a letter on my own behalf to the gentleman who wrote that letter, and told him that not only was I upset, but that I had received a lot of calls from our NAFA members.

> "Boy, the troops were really upset. They wanted a letter of apology from Runzheimer published, so that our people would know we had taken issue with what they had said.
>
> They gave us the letter of apology, which we published in the newsletter."
>
> **— Helen Bland, 1986 NAFA President**

"My feeling was, if fleet managers meant nothing to them, then we would stop doing all their surveys. I thought they owed us an apology for that," Bland said.

She said a Runzheimer executive phoned her with an explanation. Shortly after, the NAFA board met.

Said Bland: "Boy, the troops were really upset. They wanted a letter of apology from Runzheimer published, so that our people would know we had taken issue with what they had said. They gave us the letter of apology, which we published in the newsletter.

"The only thing we didn't do — and I think it took care of itself — was to insist that they also send letters (of apology) to our CEOs also," Bland said.

According to Bland, "Runzheimer said it was a poor choice of words. But it was more than a poor choice of words. They said it was done by a marketing person. Regardless of who it was, it was a terrible thing to say. Even if they didn't think we were knowledgeable or could make decisions — to make a statement like that and send it to our CEOs, who all sent it right to their fleet managers, was a complete insult."

Bland added, "I think they realized their mistake. A lot of the information they have in their own book that they publish for $400 came from NAFA members. No NAFA members are going to give them that information if they are going to say we don't have any decision-making power in our companies."

According to Bland, "I said to them in my letter: You know you are a member of NAFA. We assumed all these years that you supported NAFA membership, and obviously you don't."

Runzheimer's apology, signed by Runzheimer president Gaylord F. Milbrandt, read in part: "It is unfortunate that we carelessly allowed one of our letters (encouraging CEOs to attend a seminar) to contain an injudicious reference to fleet managers. Believe me that our poor choice of words was unintentional.

"Helen Bland, your NAFA president, has passed along some of the concern expressed by some, and that will certainly cause us to be more careful and sensitive in the future. I hope this will only be a temporary annoyance and not damage our long-term relationship with NAFA and its members."

The apology concludes, "In sum — we feel badly; we apologize; and we hope you will forgive us. You can rest assured we will continue to professionally and financially support the NAFA organization." ■

Runzheimer predicts minimal rise in gas price

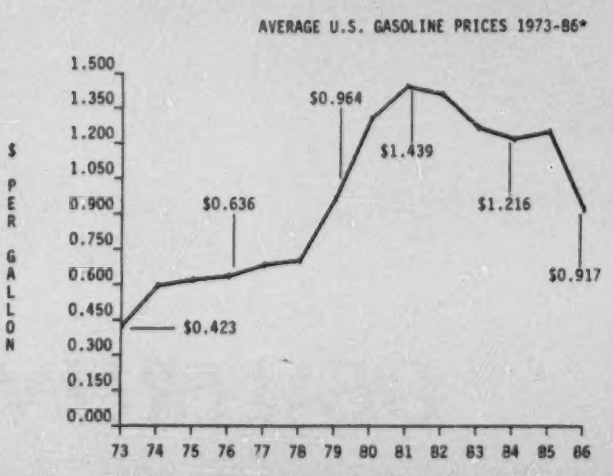
If 1987 is a relatively "normal" year, the editors of *Runzheimer Reports on Transportation* predict that "the U.S. average price per gallon of gasoline will not increase more than 5 cents above the February average of 90.5 cents per gallon (self-serve unleaded regular), and may even drop."

Runzheimer defines "normal" as a year that does not witness "flashpoints — those accidental junctures in time when rising demand for petroleum strikes against flinty and unyielding international political events to spark frenzy, fright and economic upheaval."

Further regarding gasoline prices, Runzheimer states:

"Whether OPEC can come to terms with itself in 1987 will have limited effect on the U.S. average per gallon price of gasoline for the rest of the year. There is still a great deal of excess gasoline in storage to be 'eaten up,' and no shortages are predicted for this year.

"Also, as our analysis of gasoline prices demonstrated, the maximum year-to-year increase outside of the flashpoints is less than 5 cents per gallon."



*NOTE--PRICES FROM 1973-82 WERE FULL-SERVE UNLEADED AND FROM 1983-86 WERE SELF-SERVE UNLEADED. ALL PRICES WERE EFFECTIVE ON JULY 1.

But Runzheimer also cautions that "the key to fuel-price changes is largely the ability of OPEC members to adhere to to their output ceiling. That remains to be seen." (See the accompanying graph.)

Regarding automobile insurance rates, Runzheimer says "the crisis has peaked and insurance coverage is becoming more available to fleets."

Runzheimer's editors recommend that "fleet managers should not halt the efforts they've made in the past several years with safety and risk management programs.

"A well-designed safety program, besides saving lives, represents a way to enhance respectability and professionalism of the fleet-management position within an organization."

Runzheimer quotes the Insurance Service Office as saying that "statistics show that the dollar-loss ratio for insurance companies has diminished in the past two years. In 1985 the insurance industry lost $1.165 for every dollar of income taken. In the first nine months of 1986, the loss ratio was $1.08 for every dollar. In 1987, we predict that figure will drop to about $1.05 per dollar.

"There are more available insurance companies willing to insure fleets than there have been for the past two years."

In a third area, Runzheimer notes that "each model year brings new automotive innovations to U.S. consumers. In recent years we've witnessed port-fuel-injectors that practically make carburetors obsolete, while computers have taken over a vehicle's transmission and ignition systems.

"The 1987 model year has brought us two more advancements in automotive technology: anti-lock braking systems (ABS); and all-wheel drive."

ABS is one of the newest safety features offered on 1987 models. The system is designed to provide directional stability during severe braking, regardless of the cargo weight. A modulated reduction in rear brake-line pressure inhibits rear-wheel lockup under most braking conditions.

The all-wheel-drive system is designed to provide better traction under bad driving conditions. This option is a part-time four-wheel-drive and is not intended for off-road use. It is for use in inclement weather areas, especially in the north.

For 1987, it is available in certain Subaru models, the Toyota Tercel, the Mercury Topaz and Ford Tempo. ■

FEATURES

Show us where it Hertz

Los Angeles, San Francisco and New York once again are the most expensive cities in which to operate a car, according to Hertz Corp.

Costs to own and run typical 1986 compact cars in 20 top U.S. cities edged up an average of about 1 cent a mile — under 2 percent — to a record 52.53 cents from 1985's 51.59 cents, according to Hertz Corp.'s latest annual survey.

Expenses varied by 16.68 cents a mile among the 20 cities, with Los Angeles, San Francisco and New York City ranking one-two-three for the seventh straight year, the report said.

Some 17 of the 20 major geographically spread areas reflected increases in 1986, ranging from 0.2 cents per mile in Cleveland to 2.96 cents in Miami, according to the car-rental company. Only Cincinnati, Houston and St. Louis fell.

The rise in the big cities' average compares with a jump of 1.8 percent, or 0.8 cents a mile, in the 1986 overall 48.48 cents national average.

Auto expenses in large cities are normally higher than in small towns, or in suburban and rural areas, the firm noted.

Los Angeles again led the nation with outlays estimated at 63.25 cents a mile, up 0.5 cents from 1985. San Francisco remained second, at 63.17 cents. New York City again was third, rising 1.89 cents to 62.03 cents.

Milwaukee remained in last place at 46.57 cents a mile. St. Louis fell from seventh to ninth, dropping 1.83 cents to 51.58 cents. Atlanta surged 2.41 cents to eighth place, at 51.62 cents, from 11th in '85. Miami climbed 2.96 cents to fourth spot, at 58.01 cents, from fifth the previous year. Detroit rose 2.05 cents to 50.47 cents — from 14th to 10th.

The study showed advances in vehicle sticker prices, which affect depreciation, plus increases in insurance, licenses, fees, taxes and upkeep. These offset lower car-loan interest rates and gasoline prices.

See table 1 for 1986 and 1985 cent-per-mile costs and city rankings.

Hertz estimates are for normally equipped vehicles purchased new and driven 10,000 miles a year for five years by average new-car-buying families — including two parents and one youthful, inexperienced male driver.

Purchase price averages in 1986 ranged from a low of $10,244 in Detroit to $10,663 in New York.

The category of insurance, licensing and fees ranged from 10.87 cents a mile in Milwaukee to 27.66 cents in Los Angeles.

Estimated interest varied from 6.69 cents in Washington to 8.67 cents in New York.

Maintenance and repair ranged from 4.30 cents in Cincinnati to 6.58 cents in San Francisco.

Fuel and other service-station charges went from 5.76 cents in Cincinnati to 8.11 cents in San Francisco and Seattle.

See table 2 for Hertz' estimated 20-city averages by cost category for typical new 1986 and 1985 compacts.

Hertz noted that in the past 14 years, auto purchase prices went up 238 percent, and ownership and operating charges for comparable models comparably driven rose 200 percent, while inflation was 162 percent.

To reduce running expenses, motorists have been buying smaller models with fewer options, keeping their cars longer and driving them less, figures in the latest Hertz report show. Holding cars 10 years, rather than one, normally saves more than one-third in yearly ownership costs, for example.

Over the past 14 years of expense increases since 1972, average vehicle mileage dropped 14 percent, vehicle age rose 29 percent, and most typical new models now are about 1,000 pounds lighter and a foot shorter.

Estimated 29-city averages for other '86 models, also bought new and to be driven 10,000 miles a year for five years, were:

- **Subcompacts:** 43.80 cents a mile, off 1.2 percent from 44.32 cents in 1985.
- **Mid-size units:** 60.82 cents, up 19.1 percent from 51.06 cents in 1985.
- **Intermediates:** 59.21 cents, up 3.5 percent from 57.21 cents.
- **Standard-size:** 68.24 cents, about even with 1985's 68.20 cents.

Higher annual mileage lowers typical per-mile costs, but raises total annual spending; lower yearly mileage reverses this process.

Hertz estimates 1986 personal passenger-car mileage averaged 8,894 annually for all units, and was 10,520 yearly during a new car's first five years. ■

Hose Explosion

Car design, emission laws and space limitations all have contributed to the increase in hoses

Fleet service technicians know this as well as anyone: Rubber hoses are becoming as abundant on new cars as woofers, tweeters and computer chips.

Today's automobiles are draping their frames with an average of 16 rubber hoses per vehicle compared with four to five just 10 years ago.

"There are approximately 20 feet of hose on a new car," says Ron Maltarich, marketing manager for automotive belts and hoses at Goodyear Tire & Rubber Co.

"A new car in 1977 had an upper and lower radiator hose, heater hose and a fuel-line hose," Maltarich says.

"If someone ordered air-conditioning and power steering, those options added more hoses, but that was basically it."

But as cars have motored into the age of clean environment, they have seemingly added a hose instead of a candle for each year.

Increased awareness of the driver to aerodynamics and styling, new laws governing emission controls and space limitations have all contributed to the increase in the number of hoses.

"Even heater hose has become more sophisticated," Maltarich says. "What used to be a straight hose is now a molded-curved hose."

Indeed, the four- to five-hose car has gradually evolved into a machine resembling the human vein and artery network.

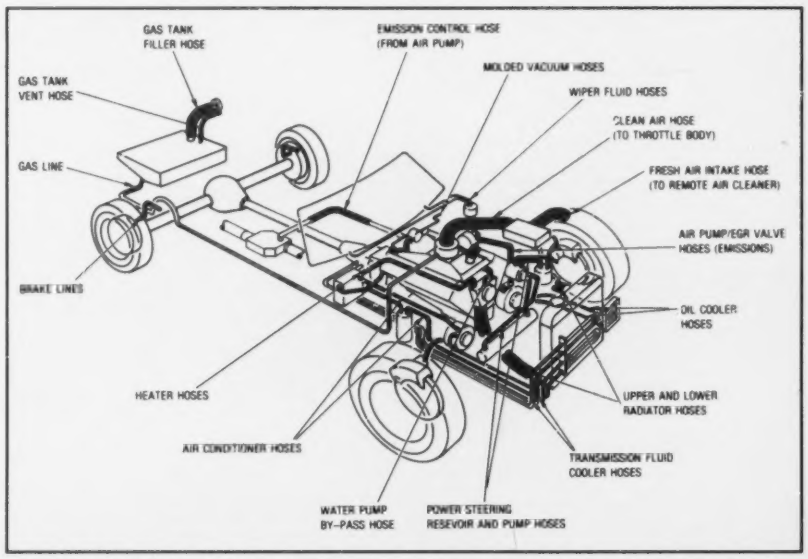
Besides the radiator, heater and fuel line hoses, today's new car might contain hoses for air management systems (emissions), fuel systems (fuel fill and fuel vent), clean-air duct, force-fed cold air, brakes, power steering and air conditioner (freon).

While federal legislation sped the evolution of some of the hose, aerodynamics and styling demanded the others.

"Because car bodies are designed more for aerodynamics and style, engine compartments are smaller," Maltarich says. "Subsequently, hoses must fit the engine curvature more closely."

Drivers also are realizing that air cleaners aren't on top of their engine any more.

"Many parts are in remote locations. These reservoirs still must be connected to the engine, and that means hoses," Maltarich says.



GAS TANK FILLER HOSE
EMISSION CONTROL HOSE (FROM AIR PUMP)
MOLDED VACUUM HOSES
GAS TANK VENT HOSE
WIPER FLUID HOSES
CLEAN AIR HOSE (TO THROTTLE BODY)
GAS LINE
FRESH AIR INTAKE HOSE (TO REMOTE AIR CLEANER)
AIR PUMP/EGR VALVE HOSES (EMISSIONS)
BRAKE LINES
OIL COOLER HOSES
HEATER HOSES
UPPER AND LOWER RADIATOR HOSES
AIR CONDITIONER HOSES
TRANSMISSION FLUID COOLER HOSES
WATER PUMP BY-PASS HOSE
POWER STEERING RESEVOIR AND PUMP HOSES

There are about 20 feet of hose on an average new car compared to five feet just 10 years ago.

While the average motorist — and fleet service technician — may have nightmares about the increasing number of hoses on cars, Maltarich says there's good news, too.

He points out: "We're making hoses that last a lot longer now. And we're so confident in our product that, for most applications, our hoses and belts should last the lifetime of the vehicle." ■

FEATURES

THE BIG SQUEEZE

Owning and operating a car gets tighter in 1986, as the cost for compacts rises to 48.48 cents per mile

Despite plunging gasoline prices and loan interest rates, 1986 auto ownership and operating expenses rose for the 13th year in the past 14, as typical compact models hit a record 48.48 cents a mile, up 1.8 percent or 0.8 cents from 1985's 47.64 cents.

This is according to Hertz Corp.'s latest annual estimates.

Since 1972, the last year before the first Arab oil embargo, outlays to own and run typical U.S. cars tripled, dropping 5.2 percent only in 1983.

By contrast, the nation's overall living costs climbed 162 percent in the same 14-year period, the rental-car company's report noted.

The survey lists 1986 increases in insurance, licenses, taxes, fees, maintenance, repairs and depreciation — the difference between car purchase price and resale value. These offset slight service-station and loan-cost declines. (Parking and tolls are excluded from the study's costs.)

Typical 1986 compact car purchase prices shot up nearly 6.2 percent to $10,439 from 1985's $9,834. Purchase price increases can boost depreciation, loan, tax and insurance outlays, the study points out.

The 1986 figure of 48.48 cents a mile is for a normally equipped compact make, bought new and driven 10,000 miles annually for five years — typical U.S. new-car driving.

Table 1 is a breakout of costs for compact cars purchased new and driven 10,000 miles a year for five years — in 1986 and 1985.

Automotive expenses differ significantly by vehicle size. optional equipment, annual mileage, ownership duration and where autos are driven.

In the report, mid-size models showed the sharpest advance, rising 19 percent to 56.13 cents a mile from 47.15 cents in 1985.

Standard-size autos stayed virtually even at 62.98 cents a mile, 56 percent above the subcompact's estimated cost, which fell 1.3 percent to 40.42 from 40.92 cents a mile.

Table 2 shows Hertz' recent per-mile cost estimates for different-sized cars bought new and driven 10,000 miles annually for five years.

New 1986 compacts driven 10,000 miles a year, but traded annually, cost 58.99 cents a mile, while those run 10,000 miles a year, for 10 years, averaged 37.71 cents a mile, some 21.28 cents under costs for annual trading, saving $21,280 over a car's 10-year, 100,000-mile lifespan, Hertz' study shows.

Table 3 is a breakdown of the yearly cost differences.

Also, used cars cost some 40 percent less than ones bought new.

Hertz data indicate that some three-quarters of all auto outlays for typical driving are in so-called "fixed" or "standing" expenses such as depreciation, interest, insurance, licenses, taxes and fees. These are largely influenced by the car's purchase price and how long the vehicle is driven.

TABLE 2: HERTZ 1978-1986 COST ESTIMATES BY CAR SIZE

CAR SIZE	1986	1985	% Change '86-'85	1984	1983	1982	1978	% Change '78-'86
Subcompact	.4042	.4092	– 1.22	.3663	.3463	.3418	.2252	+.795
COMPACT	.4848	.4764	1.76	.4567	.4328	.4467	.2485	+.951
Mid-Size	.5613	.4715	19.04	.4861	.4546	.4902	.2873	+.954
Intermediate	.5464	.5283	4.61	.5019	.4956	.5009	.2891	+.890
Standard	.6298	.6297	—	.5977	.5542	.5231	.3233	+.948
5-Size Average	.5253	.5018	4.68	.4817	.4567	.4605	.2747	+.831

TABLE 3: YEARLY COST DIFFERENCES, COMPACT CARS

Year	1	2	3	4	5	6	7	8	9	10
Cents Per Mile	.5899	.5596	.5268	.5014	.4848	.4524	.4278	.4074	.3907	.3771

TABLE 1: COMPACT CAR COSTS

	1986	1985	% Change
Depreciation	0.1660	0.1564	1.0614
Insurance, Licensing, Fees	0.1328	0.1193	1.1132
Interest (P&L)	0.0748	0.0849	–0.0614
FIXED COSTS, SUBTOTAL	0.3736	0.3606	1.0361
Maintenance & Repair	0.0453	0.0430	1.0535
Gas, Other Service Station Charges	0.0659	0.0728	–0.0948
VARIABLE COSTS, SUBTOTAL	0.1112	0.1158	–0.0397
FIXED & VARIABLE TOTALS	0.4848	0.4764	1.0176

"Variable" or "running" costs — such as gasoline, oil, maintenance, repairs, parts and accessories — comprise the remaining 25 percent of the expenditures.

Trading (or selling) a car sooner raises the "fixed" to "variable" cost ratio to about four-fifths of total charges, while keeping one longer usually lowers it to roughly two-thirds.

The Hertz data report that from 1972 to 1983 motorists drove less, kept cars longer and bought smaller vehicles with fewer options, to keep driving outlays within family incomes:

- From 1972 to 1983, average yearly passenger-car mileage dropped 22 percent from 10,362 to 8,037 miles before turning upward to 8,317 in 1984, 8,586 miles in 1985 and 8,894 last year.
- Compact cars, rather than intermediates, are now the most typical new models purchased.
- New cars are now kept an average of 5.2 years.
- Average age of all cars is now 7.6 years versus 5.7 in 1972.

The report stresses that variations in annual driving distances also have a material effect on cents-per-mile costs because annual fixed-dollar outlays are divided by more, or fewer, miles.

For the five-year driver, a new 1986 compact's costs ranged from 85.05 cents a mile at 5,000 miles a year to 30.83 cents at an annual 20,000 miles of driving — 55.22 cents a mile less.

However, on an annual dollar basis, 5,000 miles a year total just $4,252, while 20,000 miles a year come to $6,165 — $1,913 a year more.

The average driving distance for U.S. passenger cars in their first five years of service was 10,520 miles in 1985, latest year for which there are mileage figures.

Driving expenses can vary so dramatically under such a wide array of circumstances that each motorist should figure his or her own outlays, Hertz said.

For example, parking and tolls can add 10 to 40 cents to the 48.48 cents a mile average in major cities, but can vary substantially, even for similar autos in the same city, if driving patterns are different. ■

Georgia lessors seek to outlaw vehicle subleasing

By Robert H. Brown

Vehicle lessors in Georgia — and especially Atlanta — are lobbying for legislation that would make it illegal to sublease a leased car without the dealers' permission.

A law such as the one in California looks good to Georgia lessors, who say they are being taken for a ride by those who attempt to sublease the cars they have leased.

As many as 1,000 cars may have been subleased by "middle men" since last summer, according to J. David Dunaway, president of the Georgia branch of the National Vehicle Leasing Association (NVLA).

Subleasing isn't illegal in Georgia, but may be a little on the shady side of the law.

On the other hand, California lawmakers have drafted new laws that would make it a crime to sublease cars.

Lessors in Georgia have approached legislators about the possibility of getting similar legislation, but say that will not happen until next year. The Georgia general assembly has already met for 1987, and unless a special session is called, nothing is likely to happen this year to put a damper on subleasing.

As an interim measure, Georgia dealers have gone to the state Attorney General's Office and Office of Consumer Affairs. The offices have been asked to do some investigating to see if the practice can be halted, or at least discouraged.

According to the NVLA, there have been instances where leased cars have been sold without the lessor's notice, or even the lessee's.

Much of what is believed to be happening in Atlanta may have stemmed from a suit filed in nearby Gwinnett County. Lessors are watching the case closely.

In the suit, a consumer charged a local firm had illegally arranged to sublease a 1986 Audi 5000S.

According to the suit, Gerald K. Hubler accused Global International Brokerage Inc. of "false representations" in that the company told Hubler no problems had "cropped up" as a result of marketing leased automobiles to third parties.

Further, the suit charges Global knew the agreement between Hubler and a Miami man was contrary to Hubler's original contract with First National Bank of Atlanta.

However, Global, through its attorney, said in a communication to the Office of Consumer Affairs, that no wrong was committed, and that Global operates in good faith.

Because of a great deal of promotion by dealers — both exclusive lessors and dealerships — leasing has become quite popular in the Atlanta market. NVLA's Dunaway estimates something like a quarter-million leased cars may be operating on Georgia highways.

The idea of leasing caught on with young professional people who did not want to tie up large sums of money in car ownership.

However, while leasing has been attractive to many, the monthly payments have been higher than many could afford, and so they want out.

In Atlanta, dealers say, there are a lot of people who would like to get out of leases, and they are providing a steady source of supply for subleasing companies and individuals.

Dunaway said there may be as many as 900 to 1,000 cases of subleasing deals consummated.

Atlanta leasing companies are attempting to alert their customers about the hazards of subleasing vehicles. Some dealers have sent out letters to that effect.

Meanwhile, NVLA members are asking customers to stay away from persons offering to help them get out of leases.

A number of cases have come to light where cars were subleased and the sublessor failed to make payments to the original lessor. Then the lessor starts looking for his car, only to find it has been subleased. ■

Most fleet managers favor higher speed limit set by states, NAFA survey reveals

By Geoff Sundstrom

A majority of fleet managers support higher speed limits, even though significant numbers still believe 55 mph is fast enough for the nation's highways.

According to an NAFA survey, 64 percent of NAFA members favor a higher speed limit set by the states, while 33.5 percent support a 55-mph national speed limit.

NAFA said 597 fleet managers, or 47 percent of the association's membership, responded to the study.

The speed-limit survey was conducted just prior to April's Congressional vote, granting states the right to set higher speed limits on rural interstate highways.

NAFA's board of trustees asked members for their views, as part of the association's move to become more active in legislation affecting the fleet industry.

Results of the survey were sent to key leaders of the Senate and House of Representatives and were shared with NHTSA, according to NAFA.

"Fleet managers are very concerned about vehicle safety," said NAFA executive director David Lefever, "so the association staff was surprised that a majority supported higher speeds."

However, he added: "Fleet managers seem to be saying that speed is less a cause of highway accidents than are other factors."

Lefever cited alcohol abuse and driver fatigue as other major causes of traffic accidents.

He said fleet managers who prefer allowing states to increase speed limits on certain roads offered comments such as:

"The 55-mph limit on wide-open, uncongested highways is too slow."

"Nearly everyone now goes 65 mph on the interstates. Why not raise the speed limit and enforce it?"

"The decrease in injury rates is attributable to new company policies on seat-belt use, defensive driving and safety awareness; it is not attributable to the 55-mph speed limit."

"If the limit is increased, it should be strictly enforced. Drivers should not be allowed to travel 1 mph above the posted limit."

Four lines of thought were most prevalent among fleet managers who support a top speed of 55 mph, according to NAFA. Those are:

- "Sales and service people exceed the posted speed limits already. An increase in the speed limit would increase their speed, probably from 70 mph to 75 or 80 mph. It's much more desirable to travel 15 mph over the 55 mph limit than 15 mph over a 65 mph limit."
- "Control of the speed limit prevents accidents. Too much speed results in less control."
- "The average driver is not capable of handling emergency situations at higher speeds."
- "The public can travel farther on a gallon of gas at 55 mph than at 65 mph. A higher limit will produce increased reliance on imports of foreign petroleum."

Two fleet managers favored no federal regulation of speeds at all.

One said, "Get the federal government out of our lives as much as we can."

The other said, "As a police officer, I feel the 55-mph limit should be abolished, because most drivers are not obeying it, and the varying speeds they travel are causing more accidents than high speeds are."

Fleet size did not make much difference in the opinions of fleet managers.

Fleet managers supporting the current nationwide speed limit averaged 1,069 vehicles in their fleet.

Those supporting state options in rural areas averaged 1,008 vehicles, while managers seeking an end to federal limits averaged 943 vehicles. ■

Mercury Sable.
The value is in what you get...
and what you get back.

What you get is Mercury Sable...
- With four doors and room for six passengers to make it a great business car.
- With a fuel-injected 6-cylinder engine and an overdrive four-speed transmission for enhanced fuel economy.*
- With a sophisticated shape that will impress your customers and your employees.
- With today's sophisticated technology and the handling of a great road car.

And, you'll find extra value in the way we back Sable up...
- With a six-year/60,000-mile Powertrain Warranty and six-year/100,000-mile corrosion protection.**
- With 7500-mile service intervals for a savings in operating and maintenance costs and administrative time.
- With a number of available Extended Service Plans to help you budget costs and control expenses.
- With continued support from your Lincoln-Mercury Fleet Specialists at the corporate and dealer level.

What you get back is Sable's continuing value...
- With resale values reflecting Sable's popularity and Lincoln-Mercury's traditional value.
- With coated steels and special sealers for increased corrosion protection to keep Sable in shape.
- With Sable's upscale image at an affordable price.

*19 EPA EST. MPG 28 EST. HWY.
EPA estimates. Your actual mileage may vary with maintenance, options, driving conditions and habits.
**A $100 deductible must be satisfied for each extended Powertrain Warranty claim.
